

UNIVERSAL 3 POSITION FOOT CONTROLLER

In the box:

- Cat 5 cable
- Universal 3 Position Foot Controller

How to set it up:

- Turn each selector to the function you want that switch to control. (Important, no two controls can be set to the same function)
- Plug the Cat 5 cable from one of the two jacks on the controller to your Quilter amplifier RJ 45 jack.

Using two controllers

- Plug another Cat 5 cable between the first and second controller then plug either of the two available RJ 45 jacks to your Quilter amplifier. (Pro tip: Cat 5 cables that are very short can be purchased at low prices)

In use:

- When a switch is engaged an amber lamp will light indicating that the function is active.
- If the indicator fails to light, check that you don't have another switch set to the same function.
