

G2.1DM  
Dave Mustaine Signature Guitar Effects Pedal

## G2.1DM Dave Mustaine Signature Guitar Effects Pedal

Metal guitar legend Dave Mustaine has joined forces with Zoom to bring you the ultimate metal guitar effects pedal. The G2.1DM incorporates patches personally designed by Mustaine that span his remarkable career. From heavy, driving distortions to his distinctive lead tones, the G2.1DM lets you play like a metal icon.

The essence of the G2.1DM is in the 40 versatile patches that were specifically designed by Mustaine for the pedal. These tones will blow you away with how accurately they emulate the sounds of Mustaine's greatest hits. Elements of his personal style and taste are also embedded in this pedal. The G2.1DM features silk-screened body graphics created by Mustaine that makes you think metal. Plus, a customized expression pedal modeled after Mustaine's British sports car accelerator makes it truly unique.

Of course, the G2.1DM still maintains the original features that made the G2.1Nu so popular: advanced ZFX-3 sound engine, 100 user patches + 100 presets, 83 guitar effect types, on-board auto-chromatic tuner, integrated drum machine and a host of other practical and inventive features. When it comes to expressive sound and premium performance, the G2.1DM epitomizes Zoom's technical expertise and tonal proficiency.

The G2.1DM also operates as an audio interface, letting you record directly to a computer via the built-in USB port. Plus, Zoom's direct monitoring design eliminates latency problems and allows you to seamlessly capture any tone right on your favorite computer DAW. A large 1.9-inch LCD display and a new, more intuitive interface also allow easier navigation during both live and recording sessions.

Whether you're into thrash, power, shred, or speed metal, Dave Mustaine and Zoom have designed the G2.1DM for you.

## FEATURES

- > 40 original patches by Dave Mustaine
- > Custom silk-screened body graphics
- > Expression pedal modeled after the accelerator of Mustaine's favorite sports car
- > USB interface allows direct recording to a computer
- > Direct Mode optimal for recording
