

TASCAM's US-4x4HR features four XLR mic inputs and 4 TRS line inputs, with implemented MIDI IN/OUT ports. Equipped loopback function and OBS support makes this interface an excellent choice for podcasts and live streaming. The new US-4x4HR offers intuitive operation, sophisticated looks, and improved audio performance with 192 kHz support, thanks to the newly enhanced audio circuit.

Features & Benefits

Features	Benefits
Four XLR inputs and four TRS line inputs with mic/line/instrument switches	Natural, crisp tone thanks to the TASCAM Ultra-HDDA microphone preamps. Easily record microphone or direct-input signal with separate gain knobs.
TASCAM Ultra-HDDA microphone preamps	TASCAM's Ultra-HDDA (High Definition Discrete Architecture) preamps allow for the clearest, most transparent signal with an ultra-low noise floor for a quiet input with global +48V Phantom Power.
Zero latency direct monitoring function	Direct monitoring will diverge signals before sending them to the computer, resulting in smooth, in-time monitoring without any sound delay during both recording and performance.
Bundled software for high quality content creation	The US-HR models come bundled with world-renowned software that will enhance the user's production workflow. Such as: Steinberg's Cubase LE/Cubasis LE 3 DAW, IK Multimedia's Sample Tank SE, and Auto-Tune Unlimited.
Loopback function, the perfect interface for podcasts and livestreaming	The US-4x4HR can be used with computers or smartphones to easily create podcasts or live streams. The loopback function allows the audio from the computer to be returned to the streaming software for playback during live streams.
MIDI input/output	The US-4x4HR has MIDI in/out for controllers. Perfect to utilize in conjunction with the bundled software.
New audio interface engine, compatible with iPad and other iOS devices	The audio buffer size can be set starting from 4 samples (Windows only) to give the best performance; maximizing the capability of the computer in use while creating a low-latency environment. Up to 24-bit/192k audio recordings.

Overview

- Perfect for music production, internet live streams, and podcasts.
- High quality 24-bit/192k audio resolution.
- For use with a computer and iOS devices.
- USB-C bus powered.
- Zero-latency direct monitoring.
- MIDI input/output.
- Four individual TRS line outputs.

Front Panel

Separate XLR & 1/4" inputs with individual gain knobs, global phantom power switch, and signal/peak indicators

Mic/line/instrument switch (channels 1 & 2 only), monitor balance, line output gain knob, dual headphone inputs, and headphone volume knob.

Rear Panel

USB-C port, 5V DC adapter input

MIDI input/output

Four balanced TRS line outputs

Software Package

Steinberg's Cubase LE - a powerful DAW application

SampleTank 4 SE - with a massive, and free, 30GB sound library which encompasses more than 2,000 instruments

Auto-Tune Unlimited - a three month free subscription to the world's most well known pitch-correction and vocal effect software.
