

DIGITAL STUDIO WORKSTATION VS-2000

Appendices

Before using this unit, carefully read the sections entitled: "USING THE UNIT SAFELY" (Owner's Manual p. 2) and "IMPORTANT NOTES" (Owner's Manual p. 5). These sections provide important information concerning the proper operation of the unit. Additionally, in order to feel assured that you have gained a good grasp of every feature provided by your new unit, Owner's Manual, and Appendices should be read in its entirety. The manual should be saved and kept on hand as a convenient reference.

About MIDI

This section explains the basic concepts of MIDI, and how the VS-2000 handles MIDI messages.

What is MIDI

MIDI stands for **Musical Instrument Digital Interface**. It is a worldwide standard that allows electronic musical instruments and personal computer to exchange musical performance data and messages such as sound selections. Any MIDI-compatible device can transmit musical data (as appropriate for the type of device) to any other MIDI-compatible device, regardless of its manufacturer or model type.

MIDI connectors

MIDI messages (the data handled by MIDI) are transmitted and received using the following three types of connectors. On the VS-2000, MIDI OUT and MIDI THRU are handled by a single connector, which can be switched to act as the desired connector.

- MIDI IN:** This receives MIDI messages from external MIDI devices.
- MIDI OUT:** This transmits MIDI messages from the VS-2000.
- MIDI THRU:** This re-transmits all MIDI messages that were received at MIDI IN, without modifying them.

MIDI channels

MIDI is able to send information over a single MIDI cable independently to two or more MIDI devices. This is made possible by the concept of MIDI channels. You can think of MIDI channels as being somewhat similar in function to the channels on a television. By changing the channel of a TV set, you can view a variety of programs being transmitted by different broadcast stations. This is because data is received only from the transmitter whose channel is selected on the receiver.

In the same way, a MIDI device whose receive channel is set to "1" will receive only the data being transmitted by another MIDI device whose transmit channel is also set to "1."

MIDI messages

The VS-2000 uses the following types of MIDI message.

■ Note messages:

These messages are used to play notes. On a keyboard, these messages transmit the key (note number) that was pressed, and how strongly it was pressed (velocity). On the VS-2000, these messages are used when you use a MIDI sound source to play the metronome sound.

■ Control Change messages:

In general, these messages are used to transmit information such as vibrato, hold, and volume etc., that makes a performance more expressive. The various functions are differentiated by a controller number from 0-127, and the controller number is defined for each function. The functions that can be controlled on any given device will depend on that device.

On the VS-2000, these messages can be transmitted to external MIDI devices by V.Fader function.

■ Exclusive messages:

Unlike note messages and control change messages, exclusive messages are used to transmit settings that are unique to a particular device. On the VS-2000, they can be used to control VS-2000 mixer parameters, when it receives exclusive messages.

Exclusive messages intended for different units are distinguished by their Device ID, rather than by MIDI channel. When exclusive messages are to be transmitted or received, you must set the Device ID of both units to a matching setting.

MIDI Implementation Chart

MIDI allows a variety of electronic musical instruments to communicate with each other. However it is not necessarily the case that all devices will be able to communicate using all types of MIDI message. They can only communicate using those types of MIDI message that they have in common.

Each owner's manual for a MIDI device includes a MIDI Implementation Chart. This chart shows you at a glance the types of MIDI message that can be transmitted and received. By comparing the implementation charts of two devices, you will be able to see the types of message with which they will be able to communicate.

Troubleshooting

When the VS-2000 does not perform the way you expect, check the following points before you suspect a malfunction. If this does not resolve the problem, Contact your dealer or a qualified Roland Service Center.

Recording/playback

No sound

- Are the VS-2000 and the connected equipment powered-on?
- Is the equipment connected correctly?
- Are the audio cables connected correctly?
- Could the audio cables be broken?
- Are the volume controls of the connected amp or mixer raised?
- Are the output jacks to which you've connected the same as the output jacks specified in the master section of the mixer?
 - Check the settings to verify the jacks from which the signal of each bus is being sent.
- Are the master fader and the MONITOR knob raised?
- Could one or more channel faders be set to “-∞ dB”?
 - The volume levels in the track mixer are controlled by the VS-2000's channel faders. However, the position of the VS-2000's faders may differ from the actual fader values. Check the values in the Mixer Channel View screen.
 - The volume levels in the input mixer are controlled in the Mixer Channel View screen.
 - The volume levels of the effect return mixer are controlled in the Mixer Channel View screen.
- No sound from the headphones.
 - Is the PHONES knob raised? Is the MONITOR knob raised?
- The device connected to an INPUT jack is not loud enough.
 - Could you be using a connection cable that contains a built-in resistor?
Use a cable that does not contain a built-in resistor (e.g., the Roland PCS series).
- In the Mixer Channel View screen, could the “MIX” switch be turned “Off”?
- Playback does not occur when you press [PLAY].
 - Could [PLAY] be blinking green?
If the EXT SYNC indicator is blinking, the VS-2000 is waiting to receive MTC from an external MIDI device. Operate your external MIDI device to make it transmit MTC.
 - Could the track status be turned off ([TRACK/STATUS] unlit)?
Press [TRACK/STATUS] to make it light green (ready for playback).
 - Could you be using the Solo function or Mute function?
 - Could you have selected a project whose Recording Mode is “M24”?
If the Recording Mode is “M24,” the VS-2000 will operate as a twelve-track recorder (tracks 1–12). Tracks 13–17/18 will be unavailable. However, tracks 17/18 will function as dedicated rhythm tracks.
 - Are you attempting to play back a phrase that is shorter than 0.5 seconds?
 - Could the track be blank?
 - Are you playing back the mastering track?
If the mastering track is playing, conventional tracks 1–17/18 will not play.
- Can't play back tracks 17/18.
 - Could tracks 17/18 be assigned as rhythm tracks?

Can't play back the rhythm tracks

- Could tracks 17/18 be assigned as rhythm tracks?
- Could the track 17/18 (rhythm tracks) [TRACK/STATUS] be dark (muted)?
- Could the track 17/18 (rhythm track) volume level be set to “-∞ dB”?
- Could you have selected an empty rhythm arrangement or pattern?
Playback won't be available if you've selected a rhythm arrangement/pattern of a user/project group in which you have not stored a rhythm arrangement/pattern.

Can't record

- Did you select a recording track?
 - Set the track's [TRACK/STATUS] to blinking red (record-ready).
- Did you assign an input source (input/track/effect return mixer, AUX/FX bus, DIR bus signal) to the recording track?
 - In order to record, you must specify the routing (internal connections).
- Do you have sufficient free hard disk space?
- Do you have sufficient free events in the project?
- The number of simultaneously recordable tracks has decreased.
 - Depending on the structure of a project, the maximum number of simultaneously recordable tracks may be less than stated in the specifications (p. 104).
- Could you have selected the CD-RW drive as the current drive?
 - You can't record or play back with the CD-RW drive as the current drive. Select a partition of the internal hard disk to be the current drive.

Can't record a digital input signal

- Have you made settings to allow digital audio input from a CD player?
 - Settings are required if you want to record the output from a CD player via the COAXIAL IN connector.
- In the Digital I/O Parameter screen, could "MASTER CLOCK" be set to "INT"?
- Although the unit is connected to digital device, cannot set "MASTER CLOCK" parameter to "DIGITAL IN"?
 - For digital connection, please use dedicated cable for digital audio (coaxial type).
 - Set both your digital audio device and the project to the same sampling frequency of 44.1 kHz.
- Is your digital audio device transmitting a digital signal?
 - Some digital audio devices do not output a digital signal unless they are in Play mode. If so, put your digital audio device in standby (pause) mode, and then put the VS-2000 in record mode.
- Could the digital audio signal be in the wrong format?
 - Some digital audio devices use a proprietary digital signal format. Please connect a digital audio device that complies with the EIAJ CP-1201 standard.

Harmony audio is unclear

- Does the harmony source track contain a monophonic (single-note) performance?
 - Harmony will not work correctly with a track that contains a polyphonic performance.
- Harmony may not work correctly depending on the character and level of the sound recorded on the harmony source track.
- Could the harmony source track contain unwanted sound in addition to the desired audio material?

Recorded sound contains noise or distortion

- Is the input sensitivity appropriate?
 - If the input sensitivity is too high, the recorded sound will be distorted. Conversely, if the input sensitivity is too low, the recorded sound will be masked by noise.
 - Adjust the SENS knob so that the level meter moves as high as possible in the region of -12 dB–0 dB.
- Could you be using the equalizer in the input mixer?
 - Depending on the equalizer settings, the sound may distort even though the PEAK indicator channel is not highlighted. Please re-adjust the equalizer.
- Is the ATT (attenuator) set appropriately?
 - If noise or distortion occurs after you bounce tracks, the track output level is too high.
- Could you be inputting audio from your computer with the computer connected via USB?
 - Terminate the connection as described in "Terminating the connection to your computer" (Owner's Manual), and then disconnect the USB cable.

Pitch is wrong when you play something back

- Could you be using the Region Compression/Expansion function?

Internal hard disk/CD-RW drive

Hard disk free area

- Free space on the hard disk does not increase even if you use Region Erase to erase an unwanted track.
 - When you execute Region Cut/Erase and Phrase Delete, it will appear that the performance data has disappeared. However in reality, the erased performance data still remains on the hard disk in order to allow Undo to be performed.
 - If you want to increase the free space on the hard disk, execute the Project Optimize operation.

Hard disk data is not saved correctly

- Could you have powered-off the VS-2000 without performing the shutdown process?
 - You must perform the shutdown process to make sure you have saved the recorded performance and turn the power off safely.
- Could you have turned off the power while the hard disk was operating?
- Could the hard disk have been subjected to a strong impact?
 - Reformat the hard disk. We recommend that you also execute a Surface Scan. If an error occurs when you execute Surface Scan, set "Physical Format" to "On" and try formatting the disk again.
- If the hard disk malfunctions, there may be cases in which the stored contents will be lost.
 - The hard disk is an item that eventually will wear out. You should think of a hard disk as temporary storage location—not as a permanent storage—and always back up irreplaceable recorded performances onto CD-R/RW discs.

Can't use the internal CD-RW drive

- Can't make the CD-RW drive the current drive.
 - Could you have inserted a disk that the VS-2000 cannot read (such as an audio CD or blank CD)?
- Is a CD-R/RW disc inserted?
 - Insert a CD-R/RW disc before you perform an operation on the CD-RW drive.
- Backup data saved on a CD-R/RW disc is not recognized by the CD-ROM drive in your personal computer.
 - The VS-2000 backup data format is specific to the Roland VS series. This data cannot be used by devices other than the VS series.
- While writing or reading a CD-R/RW disc, error messages such as "Medium Error!", "Unusable Sector!", or "Operation Failed!" are displayed, and the operation is aborted.
 - It may be that the CD-R/RW disc is scratched or damaged in some way. Try a different disc (a new disc), and see whether the same problem occurs.
 - It is possible that the CD-RW drive is broken. The read/write mechanism (laser pickup) inside a CD-RW drive is something that wears out eventually. If the drive is still unable to read/write correctly, please contact the nearest Roland Service Center, or an authorized Roland distributor, as listed on the "Information" page (Owner's Manual).

An audio CD created by the VS-2000's CD-RW drive won't play on a consumer CD player

- Did you finalize the disc?
 - A CD-R disc written using the Track At Once method must be finalized.
 - Turn the "FINALIZE" setting "On" in the CD-R Write screen when you write the disc, or execute finalization by itself.
- Are you using a CD-RW disc?
 - Some consumer CD players are unable to play audio written to a CD-RW disc. You can use the VS-2000's CD Player function to listen to the disc.

Can't write to a CD-R/RW disc (Creating an audio CD)

- Is there sufficient free space on the internal hard disk?
 - When you create an audio CD, an image file is created on the hard disk. The hard disk must have enough free space to create this image file.
- Are you attempting to write tracks that exceed the free space on the CD-R/RW disc?
 - The size of the tracks you are writing and the free space on the CD-R/RW disc are shown in the CD-R Write screen.
- Are you attempting to write to an already-finalized CD-R disc?

Internal effects

Can't use effects

- Can't use EFFECT 3–EFFECT 6.
 - Is the VS8F-2 (sold separately) installed?
With the standard internal effects, EFFECT 1/EFFECT 2 will be available. In order to use EFFECT 3–EFFECT 6, you must install one or more VS8F-2 boards.
- For EFFECT 2/EFFECT 4 /EFFECT 6, are you attempting to select a patch that uses one of the following algorithms?
Reverb/Gate Reverb/Vocoder 2 (19)/Voice Transformer/Mastering Tool Kit
- Has a patch using one of the following algorithms already been selected for EFFECT 1/EFFECT 3/EFFECT 5?
Vocoder 2 (19)/Voice Transformer/Mastering Tool Kit
- Could you be using RSS pan?
 - RSS pan uses the built-in effect board to perform processing. This means that if in the RSS Pan Setup screen you set "FX BOARD'A' Use Sw" to "On," EFFECT 1 and EFFECT 2 will not be available.
- Could you be using harmony?
 - Harmony uses the built-in effect board and the VS8F-2 (sold separately) to perform processing. This means that the number of effects corresponding to the number of harmony parts will be unavailable.

Can't change the connection order of the effect algorithm

- You cannot change the connection order of the effect algorithm. You can only switch effects on/off. For the connection order of each algorithm, refer to "Algorithm list" (p. 21).

USB connection

When connected to your computer via USB, the VS-2000's internal CD-RW drive is detected

- If this occurs, re-connect using one of the following methods (A–C).

Break the connection as described in "Terminating the connection to your computer" (Owner's Manual), and disconnect the USB cable.

MIDI devices

When the VS-2000 is the master, your MIDI sequencer doesn't sync with it

- Is the MIDI cable connected correctly?
- Could the MIDI cable be broken?
- In the MIDI Parameter screen, could "MIDI OUT/THRU" be set to "Out"?
- In the Sync Parameter screen, is "MIDI OUT SYNC Gen." selected correctly?
- Could the EXT SYNC indicator be blinking?
 - The Sync Parameter screen's "SYNC MODE" is set to "EXT."
 - If you want the VS-2000 to operate as the master, set this to "INT."
- Are the two devices using different types of MTC?
 - In order to synchronize via MTC, the VS-2000 and your MIDI sequencer must be set to use the same type of MTC. The VS-2000's MTC is specified by the Sync Parameter screen's "FRAME RATE" setting.
- Is MIDI clock data recorded in the sync track?
 - If you want to use the sync track to synchronize the operation, you must first record MIDI clock data in the sync track.
- Could the settings in your MIDI sequencer be incorrect?
- Is your MIDI sequencer in playback-ready mode?

The VS-2000 doesn't sync with a MIDI sequencer when it's the master

- Is the MIDI cable connected correctly?
- Could the MIDI cable be broken?
- Are you attempting to sync to MIDI Clock?
 - The VS-2000 can operate as a slave only to MTC.
- Could the EXT SYNC indicator be dark?
 - The Sync Parameter screen's "SYNC MODE" is set to "INT."
 - If you want the VS-2000 to operate as the master, set this to "EXT."
- Are the two devices using different types of MTC?
 - In order to synchronize via MTC, the VS-2000 and your MIDI sequencer must be set to use the same type of MTC. The VS-2000's MTC is specified by the Sync Parameter screen's "FRAME RATE" setting.
- Could your MIDI sequencer be set inappropriately?
- Is the VS-2000 in playback-ready mode ([PLAY] blinking)?
- The incoming MTC may be of poor quality.
 - In the Sync Parameter screen, try setting the "ERROR LEVEL" to 5 or higher. This may help.

Other

Buttons don't work, or work in unexpected ways

- Could the System Parameter <1/3> screen's "SHIFT LOCK" be turned "On"?
 - If shift lock is on, pressing [SHIFT] will turn the shift button on (lit), and the state of [SHIFT] being held will be maintained. In this state, only buttons that work in conjunction with [SHIFT] will function. Press [SHIFT] once again to turn the shift button off (unlit).

Error Messages

■ Aborted Command!

This disk drive cannot be used by the VS-2000.

■ Arbitration Failed!

The disk drive could not be accessed. Make sure that the disk drive is connected correctly.

■ AUTOMIX: Event Memory Full!

The project already contains all of the events it can hold. Delete unneeded automix data or perform a Project Optimize operation.

■ Blank Disc

The CD in your drive is blank. Insert a CD or CD-R/RW that contains recorded material.

■ Cannot write in "Track at Once" format on CD-RW Disc!

You have tried to write the audio data in "Track at Once" format with a CD-RW disc in the drive.

■ Can't Communicate!

There is a problem with your disk drive connection. Make sure the disk drive is connected correctly.

■ Can't Set Marker!

Track number markers must be at least four seconds apart.

■ Can't record CD!

Digital recording from a CD player is not enabled. Please read "Recording Digital Input Signals" (Owner's Manual).

■ CD-RW Memory Full!

There is not enough room on the CD-R/RW disc.

■ Check Condition!

The disk drive could not be accessed. Make sure that the disk drive is connected correctly.

■ DIGITAL In Lock

The sample rate reference clock is set by the digital signal received at the COAXIAL IN connector as shown above. You can now record the digital signal.

■ DIGITAL In Unlock Change to Internal Clock?

You cannot yet record the incoming digital audio because it is not being received by the COAXIAL IN connector as shown above, or because the project sample rate (44.1kHz) and the sample rate of the digital device connected to the COAXIAL IN are different.

Switch the sample rate reference clock to the VS-2000's internal clock by pressing [ENTER]. After checking to make sure that all digital devices are properly connected and that the sample rates for all of the devices match, try this operation again.

■ Disk Memory Full!

There is insufficient free space on the disk. Erase unneeded data or select a different disk drive. The current disk partition already contains 200 projects, the maximum number of projects it can hold. Delete unneeded projects or select a different disk drive.

■ Drive Status Error!

The disk drive could not be accessed. Make sure that the disk drive is connected correctly.

■ Drive Time-out!

There is a problem with your disk drive connection. Make sure the disk drive is connected correctly.

■ Drive Unformatted!

The disk drive has not yet been initialized by the VS-2000. Initialize the disk drive.

If the disk drive has already been initialized by the VS-2000, there is a problem with its connections. Make sure that the disk drive is properly connected.

■ Drive Busy!

If this message appears when you first begin using a disk drive with the VS-2000, the disk drive is not fast enough. You may still be able to use this disk with projects that have a lower sample rate or use a different recording mode.

If this message appears after you have been using a disk drive with the VS-2000, the data on the disk drive has become fragmented. This will unacceptably slow down the reading and writing of data. Try bouncing the current track to re-record its data onto another track, or optimize your project. If this message still appears after these measures have been taken, copy the project data to another disk drive and initialize the disk drive that experienced the problem.

■ **Drive Not Ready!**

The disk drive is not yet ready. Please wait a moment.

■ **Error Disc!**

There is a problem with the hard disk or CD. The device or media in question cannot be used with the VS-2000. In the case of a hard disk, you may be able to recover from this error by executing Drive Check. Please read "Drive Check" (Owner's Manual).

■ **Event Memory Full!**

The project already contains all of the events it can hold. Delete unneeded automix data or perform a Project Optimize operation.

■ **Exceeding limit of RSS PAN Channels!**

You have reached the maximum number of channels for which RSS pan can be used.

■ **Finalized CD!**

The CD is a commercial CD or a CD-R/RW disc you have already finalized. Replace the disc with a blank disc or one that has not yet been finalized.

■ **Found Illegal Track Pair!**

■ **Found Illegal Phrase Pair!**

You attempted to perform region/phrase editing (copy/move/exchange, etc.) between a CDR mode mastering V-track and a conventional V-track. Please re-select the track(s).

■ **Hardware Error!**

There is a problem with the disk drive. Contact the disk drive's manufacturer or dealer.

■ **Illegal Phrase Pair!**

You attempted to perform region/phrase editing (copy/move/exchange, etc.) between a CDR mode mastering V-track and a conventional V-track. Please re-select the track(s).

■ **Illegal Phrase Belongs to rhythm Track or Destination Track is rhythm Track.**

You attempted to perform phrase editing on tracks 17/18, which are functioning as rhythm tracks. Please re-select the track(s). Alternatively, switch tracks 17/18 so they function as audio tracks.

■ **Illegal Request!**

This disk drive cannot be used by the VS-2000.

■ **Illegal Track!**

You attempted to execute Phrase New between a CDR mode mastering V-track (take) and a conventional V-track (take). Please re-select the track(s).

■ **Illegal Track! Select Track includes Rhythm Track.**

You attempted to perform region editing on tracks 17/18, which are functioning as rhythm tracks. Please re-select the track(s). Alternatively, switch tracks 17/18 so they function as audio tracks.

■ **Illegal Track Pair!**

You attempted to perform region/phrase editing (copy/move/exchange, etc.) between a CDR mode mastering V-track and a conventional V-track. Please re-select the track(s).

■ **Invalid Disc!**

It is not the ISO9660 format CD.

■ **Lack Of Event!**

You have tried to undo or redo when the remaining number of free project events is less than 200. This operation cannot be performed.

■ **Lack of IDE Memory!**

There is insufficient free space on the disk. Erase unneeded data or select a different disk drive. The current disk partition already contains 200 projects, the maximum number of projects it can hold. Delete unneeded projects or select a different disk drive.

■ **MARKER Memory Full!**

The project already contains 1000 markers, the maximum number it can hold. Delete unneeded markers.

■ **Medium Error!**

There is a problem with the disk drive media or CD. This disk cannot be used by the VS-2000. In some cases, data in the disk drive can be recovered using the Drive Check operation.

■ **Message Error!**

There is a problem with your disk drive connection. Make sure the disk drive is connected correctly.

■ No Data on the Source Tracks!

The project you have selected contains no data.

■ Operation Canceled!

You have aborted the procedure by pressing [EXIT/NO].

■ Operation Failed!

Processing was halted due to insufficient memory or due to an error that occurred in the disk drive itself. Check your connections and verify the reliability of your hard drive.

■ Operation Failed! Source Project has Too Many Take Events.

Too many take events exist on the source project. Therefore, it is impossible to execute Track Import.

■ Phase Mismatch!

There is a problem with your disk drive connection. Make sure the disk drive is connected correctly.

■ Project Protected!

Since Project Protect is on, the operation cannot be executed.

■ RHYTHM TRACK: Edit Error! Measure Over.

You have attempted to create Rhythm Arrange exceeding the limitation (up to 999 measure).

■ RHYTHM TRACK: Edit Error! Note Memory Full!

You have consumed full of notes (up to 10,000 notes) while creating Rhythm Arrange or Rhythm Pattern.

■ TOC Error!

An error occurred while reading the CD-R/RW disc. There is a problem with the Roland CD recorder (CD-R/RW drive) or the CD-R/RW disc.

■ Too Many Index!

The CD already has 98 markers, the maximum number of markers it can hold.

■ Too Many Index!

The CD already has 98 markers, the maximum number of markers it can hold.

■ Track 0 Not Found!

There is a problem with the disk drive media or CD. This disk cannot be used by the VS-2000. In some cases, data in the disk drive can be recovered using the Drive Check operation.

■ Undefined Sense!**■ Unknown Drive Error!**

There is a problem with your disk drive connection. Make sure the disk drive is connected correctly.

■ Write Protected!

The disk drive is write-protected.

Glossary

ATA

This is an interface for PC hard disks, and is the official standard for the interface known as IDE.

It provides various improvements over the older IDE, such as increased transfer speed.

ATAPI

This is a specification that was developed in order to allow devices other than hard disks (such as CD-ROM drives) to be connected using the ATA specification.

CD-R

Short for **Compact Disc Recordable**. This is a system for reading and writing discs in the same format as that used for CDs (CD-ROMs and music CDs). A specialized CD-R drive allows one-time only writing of discs.

However, as long as the data has not been finalized and there is sufficient capacity remaining on the disc, the CD-R drive can be used for multiple additions to, and changes in the material.

Sometimes they are referred to as "Write Once CD," "CD-Write Once," or something similar.

CD-RW

Short for **Compact Disc ReWritable**. This is a system allowing creation of discs that can be read using the same format as regular CDs (CD-ROMs and Music CDs). While resembling the CD-R system in that it uses a special CD-RW drive, these discs can be rewritten any number of times.

Compressor

An effect that suppresses volume fluctuations. When the input signal exceeds a specified level (threshold), the gain is reduced as the input signal rises, thus suppressing signal overload. The same algorithm can also be used as a limiter (an effect that instantaneously suppresses peaks).

Of the effects in this system, only the compressor included in guitar multi 1-3 simulates a compact compressor for guitar, and works differently from a limiter. (It suppresses signal overloads, and also evens out the volume by raising low-level signals.)

COSM

Stands for **Composite Object Sound Modeling**. This is "a technology which combines multiple sound models to create new sounds," which was first used on the Roland's VG-8 V-Guitar System. For example, sounds created on the VG-8 are the result of a variety of sound models (elements) such as the pickup, the body of the guitar, the guitar amp, mic, and speaker etc.

Current Project

The project currently being recorded, played back, or edited is referred to as the current project.

DAT

Short for **Digital Audio Tape**. This refers both to the system of recording digitized sound to magnetic tape, as well as to the tapes themselves. Besides digital audio signals, all song information is recorded on the tape, including starts and track data, information to allow or prevent copying, etc.

Dynamics (effect)

Effects that compressor expand the range of volume changes. These effects are used to reduce noise when recording to tape, or to increase the dynamic range of a tape or wireless mic. Dynamics effects provided on this system include Enhancer, Expander, Compressor, and Limiter.

DSP

An abbreviation for **Digital Signal Processing**. Technology that uses dedicated circuitry or software calculations to process digitized audio or video signals in order to implement the functionality of a mixer, filter, or effect processor. By extension, DSP is also used to collectively refer to effect devices and effect functionality that uses such technology.

Expander

An effect that increases (by a fixed ratio) the difference in loud and soft volume levels, by making low-level signals softer, and high-level signals louder.

Finalize

This is the operation that writes the TOC to a prepared audio disc. Whereas additions and changes can be made to discs that have not yet been finalized, such discs are not playable on regular CD players.

Formants

A formant is an important element which determine the character of a vocal sound. It is a fixed overtone whose location is determined by the size of the vocal chords.

Conventional pitch shifters modify the pitch in a way that changes even the location of the formants (which by nature do not change). For example when a conventional pitch shifter raises the pitch, a "duck voice" is produced as if the vocal chords had shrunk, and when the pitch is lowered a "giant voice" is produced as if the vocal chords had expanded.

The Voice Transformer modifies the basic pitch and the formant separately, allowing a variety of voice characters to be created.

Frame

Similar to the individual frames in a roll of movie film, the numerous still pictures that are displayed in rapid succession to create a moving video image are also known as "frames." About thirty of these frames are shown each second. When hard disk recorders, sequencers, and other such equipment are synchronized with video, it is generally assumed that there should be one frame every 1/30th of a second.

GUITAR (Hi-Z)

A high-impedance input jack for directly connecting electric guitars.

GPI

GPI stands for **General Purpose Interface**. This is a control jack provided on professional and consumer video devices such as video editors and title superimposers. By connecting this control jack to the foot switch jack of the VS-2000 and setting the Foot Switch Assign to "GPI," the connected device will be able to play back/stop the VS-2000.

IDE

IDE stands for **Integrated Device and Electronics**. This is the standard data transmission method used by the hard disk drives of recent personal computers. Currently, IDE complies with the formal standard known as ATA. The internal hard disk drives are IDE compatible.

IEC

The signals that are transferred via the digital input/output of this device comply with the IEC60958 and IEC958 (consumer) formats.

Limiter

An effect that works similarly to a compressor. When the input signal rises beyond a specified level (threshold), a limiter instantly lowers the gain to limit the output level. The degree of compression is specified by the Ratio. In general, ratios of 1:10 or less are referred to as compression, in distinction to limiting.

MMC

MMC is an acronym for **MIDI Machine Control**. This is rule that defines how MIDI system exclusive message can be used to control multiple recording devices from a single device. The VS-2000 supports MMC. In addition to song play back, stop and fast-forward, you can also select the tracks for recording, etc.

MTC

MTC stands for **MIDI Time Code**. This is a group of messages which are transmitted and received between MIDI devices to synchronize their operation. Unlike MIDI Clock messages, MTC specifies an absolute time. Like SMPTE time code, MTC also supports a variety of frame rates. If you wish to use MTC to synchronize the operation of two devices, both devices must be set to the same frame rate.

NTSC Format

Color television format used in Japan, the United States, and other countries. Tapes recorded in the NTSC format cannot be played back on video decks utilizing the SECAM/PAL formats.

Phantom Power

This is a method of providing electric power to condenser mics via the mic cables. Generally, a mixer's internal phantom power source supplies 6–48 volts (DC). Supplying phantom power to dynamic mics, audio play back devices, or other such equipment may result in damage to the equipment. Turn the phantom power switch on only when connecting condenser mics which need phantom power; otherwise, leave it switched off.

PS/2 Keyboard, PS/2 Mouse

This keyboard and mouse can be connected to the connectors furnished on PS/2 computers developed by IBM in the United States. The VS-2000 allows you to use a PS/2 keyboard, input names, and perform operations using the PS/2 mouse.

RSS

RSS stands for **Roland Sound Space**. This is an effect which allows a sound source to be placed in three-dimensional space when played back on a conventional stereo system. The sound can be placed not only in front of the listener, but also directly to the side, above, below, and behind the listener.

SCMS

SCMS stands for **Serial Copy Management System**. This is a function that protects the rights of copyright holders by prohibiting recording via a digital connection for more than two generations. When digital connections are made between digital recorders that implement this function, SCMS data will be recorded along with the audio data. Digital audio data which contains this SCMS data cannot again be recorded via a digital connection.

SECAM Formats/PAL Formats

Color television formats used in Europe and other areas. Tapes recorded in the SECAM or PAL formats cannot be played back on video decks designed for the NTSC format.

Shutdown

In order to turn the power off safely, you must first make sure that the performance has been saved to hard disk, and that the hard disk heads are parked. This procedure is referred to as Shutdown.

SMPTE time code

This is a signal format defined by the American organization SMPTE (Society of Motion Picture and Television Engineers) which is used to synchronize the operation of video or audio devices. SMPTE specifies "hours:minutes:seconds:frames" to indicate the address of each frame of a video image. For this reason, there are a variety of frame rates.

TOC

Short for Table of Contents. This is the region on the CD-R disc that handles information such as song times, end times, sequence, and so on. Although the songs on a disc and their playing time can be displayed when an audio CD is placed in a CD player, this is because they can be read automatically from the TOC. The TOC is recorded differently than music data, with its main characteristic being disc access, such as the ability to go to the start of any song instantly.

Track Minutes

The amount of available recording time that is called for a standard unit corresponding to the time of one continuous monaural signal recorded to one track.

VGA

Although developed by IBM in America as a graphics system with a resolution of 640 x 480 pixels able to display sixteen colors, various companies have further developed VGA-compatible modes, enabling high-resolution multi color displays. Today, rather than designating a particular graphics system, VGA has instead come to mean a standard of high-resolution graphics. The VS-2000 is equipped with a VGA output connector, allowing you to connect a VGA monitor and display the information with a resolution of 640 x 480 pixels in 256 colors.

Shortcut Key Operations

Here is a list of the functions that can be performed by pressing multiple buttons, or using the TIME/VALUE dial in conjunction with a button.

■ FUNCTION buttons

[F1 (PROJ)]	To the PROJECT LIST screen
[F2 (TRACK)]	To the TRACK REGION/PHRASE EDIT MENU screen
[F3 (EFFECT)]	To the EFFECT VIEW screen
[F4 (UTIL)]	To the UTILITY MENU screen
[F5 (WAVE)]	Display wave form
[F6 (MARKER)]	Show MARKER dialog

■ TRACK/STATUS, INPUT, and FX buttons

Hold [TRACK/STATUS] (*1)	To the QUCIK ROUTING screen
(When using the Quick Routing screen) [TRACK/STATUS]+[CLEAR]	All track assignments are canceled.
• [CLEAR] + [TRACK/STATUS] (1–17/18) (*2) • [CLEAR] + INPUT [1]–[10] • [CLEAR] + [FX1]–[FX6]	Adjust the each channel faders to set the “0 dB,” and the PAN (BALANCE) knobs to set the “Center.”
• [TRACK/STATUS] + [TRACK/STATUS] (*2)(*3) • INPUT [1]+[2] – [9]+[10] (*3) • [FX1] + [FX2] – [FX5] + [FX6] (*3)	Channel Link mode on/off

(*1) When buttons are showing track conditions

(*2) When [CH EDIT] is lit.

(*3) Hold down button of an odd-numbered channel, and press button of the next highest-numbered (even-numbered) channel.

■ Transport Control buttons

[SHIFT] + [ZERO]	Store current song data to the disk drive
[SHIFT] + [REW]	Moves to the first recorded audio of the project.
[SHIFT] + [FF]	Moves to the last recorded audio of the project.
(after shutdown) [SHIFT] + [PLAY]	Restart
[REC] + [TRACK/STATUS] (1–17/18)	Switch the status to REC
[STOP] + [TRACK/STATUS] (1–17/18)	Switch the status to PLAY

■ PREVIOUS/NEXT/TAP MARKER buttons

[SHIFT] + [PREVIOUS]	If there is a phrase at the current location, move to the beginning of that phrase. (*4) If not, move to the end of the previous phrase. (*4) Move to the previous marker. (*5)
[SHIFT] + [NEXT]	If there is a phrase at the current location, move to the end of that phrase. (*4) If not, move to the beginning of the next phrase. (*4) Move to the next marker. (*5)
[CD-RW] + [TAP MARKER]	Register a marker for audio CD track number
[CLEAR] + [TAP MARKER]	Erase a marker
[SHIFT] + [CLEAR] + [TAP MARKER] → [ENTER/YES]	Erase all markers
[SHIFT] + [TAP MARKER]	To the TEMPO MAP screen

(*4) When PREVIOUS/NEXT Sw is “MARKER.”

(*5) When PREVIOUS/NEXT Sw is “PHRASE.”

■ AUTOMIX

[SHIFT] + [AUTOMIX]	To the AUTOMIX SETUP screen
[AUTOMIX] + [TAP MARKER (SNAPSHOT)]	Stores a snapshot (when Automix is “on.”)
[AUTOMIX] + [REC (AUTOMIX REC)]	Automix real time recording (when Automix is “on.”)

■ LOCATOR/SCENE buttons

[LOCATOR] → [CLEAR] + [TRACK/STATUS] (1-17/18)	Clear the setting of locators
Hold [LOCATOR]	Switch the locator bank (when locator mode is "on.")
[SHIFT] + [LOCATOR (SCENE)] → [TRACK/STATUS] (1-17/18)	Clear the setting of scenes
Hold [SHIFT] + [LOCATOR (SCENE)]	Switch the scene bank (when scene mode is "on.")

■ IN/OUT/FROM/TO Buttons

[CLEAR] + [IN]	Clear the track edit in point
[CLEAR] + [OUT]	Clear the track edit out point
[CLEAR] + [FROM]	Clear the track edit from point
[CLEAR] + [TO]	Clear the track edit to point

■ A.PUNCH/LOOP Buttons

[SHIFT] + [A. PUNCH] or [LOOP]	To the AUTO PUCH punch in/out point setting screen
[A.PUNCH] + [IN]	Register the auto punch-in point
[A.PUNCH] + [OUT]	Register the auto punch-out point
[A.PUNCH] + [CLEAR] + [IN]	Clear the auto punch-in point
[A.PUNCH] + [CLEAR] + [OUT]	Clear the auto punch-out point
[A.PUNCH] + [TAP MARKER]	Register the auto punch-in point and clear the auto punch-out point.
[LOOP] + [FROM]	Register the loop-from point
[LOOP] + [TO]	Register the loop-to point
[LOOP] + [CLEAR] + [FROM]	Clear the loop-from point
[LOOP] + [CLEAR] + [TO]	Clear the loop-to point
[LOOP] + [TAP MARKER]	Register the loop-from point and clear the loop-to point.

■ Other

[SHIFT] + [CD-RW]	To the MASTERING ROOM screen
[SHIFT] + [HOME]	Switch the Graphic display (HOME screen)
[SHIFT] + [UNDO (REDO)]	Redo function (when the UNDO indicator is lit)
[SHIFT] + [EZ ROUTING]	To the Parameter View screen of V-Track
[SHIFT] + [PAGE]	The JUNP dialog appears.
[SHIFT] + [▼] [▲]	Zoom to change the number of tracks appearing in the playlist display.
[SHIFT] + [◀] [▶]	Change of the time axis display width of the playlist.
[SHIFT] + TIME/VALUE dial	Modify the value at 10 times the usual speed. When adjusting the channel level and AUX Send level, value is changed per 0.1 dB. In Play condition when the cursor is displayed at the sub frame of the time code display, move the current time in units of approximately 1/100 frame.
[SHIFT] + [SOLO]	All solo mode is turned off
[SHIFT] + [SHIFT]+[SOLO (MUTE)]	All mute mode is turned off
[CLEAR] + Fader	Temporarily unlink the fader from its group so you can adjust its level independently.
[HOME] + The VS-2000 turn on (*6)	Select the LCD as the main display.
[HOME] + [F6 (VGA↔LCD)] (*6)	Switch the operation display

(*6) When the VS20-VGA (sold separately) VGA/mouse expansion is installed. The VS20-VGA (sold separately) will be supported by system version 2.00 and later.

■ Mouse Operation (*7)

[SHIFT] + Dropping	Copy the data.
--------------------	----------------

(*7) When the VS20-VGA (sold separately) VGA/mouse expansion is installed. The VS20-VGA (sold separately) will be supported by system version 2.00 and later.

Effect Preset Patch List

On the VS-2000, you can access the range of effects listed below.

- * The Patches using algorithm shown below cannot be selected on the EFFECT 2, 4, and 6.
Reverb/Gate Reverb/Vocoder2 (19)/Voice Transformer/Mastering Tool Kit
- * The Patches cannot be selected on the EFFECT 2, 4, and 6, when the Algorithm shown below is used on the EFFECT 1, 3, and 5.
Vocoder2 (19)/Voice Transformer/Mastering Tool Kit
- * The Patches using algorithm shown below cannot be selected on the projects with 64kHz or higher sampling rate.
Reverb/Gate Reverb/Vocoder2 (19)/Voice Transformer/Mic Modeling/Speaker Modeling/Mastering Tool Kit
- * Below chart describes about "TYPE" of Effect Preset Patch.

Loop: Direct Level is set to "0." Connect this Patch to the effects bus.
Insert: This Patch mixes the direct sound and effected sound. Insert it into a channel.

■ Same as Algorithm (36 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P000	Reverb	Reverb	Loop	Mono	(p. 22) [3 Band EQ] → [Reverb]
P001	Reverb2	Reverb2	Loop	Mono	(p. 24) [Reverb] → [Gate] → [3 Band EQ]
P002	Gate Reverb	Gate Reverb	Loop	Mono	(p. 25) [Gate Reverb] → [3 Band EQ]
P003	Delay	Delay	Loop	Mono	(p. 26) [Delay] → [3BAND EQ]
P004	StPS-Delay	Stereo Pitch Shifter Delay	Insert	Stereo	(p. 27) [Pitch Shifter] → [Delay] → [3 Band EQ]
P005	Delay RSS	Delay RSS	Insert	Mono	(p. 28) [3 Tap Delay] → [RSS]
P006	TapeEcho201	Tape Echo 201	Loop	Mono	(p. 29) [Tape Echo 201]
P007	MultiTapDly	Multi Tap Delay	Insert	Mono	(p. 30) [Multi Tap Delay] → [3 Band EQ]
P008	StDly-Chorus	Stereo Delay Chorus	Insert	Stereo	(p. 31) [Delay] → [Chorus] → [3 Band EQ]
P009	Chorus RSS	Chorus RSS	Insert	Mono	(p. 32) [Chorus] → [RSS]
P010	Space Chorus	Space Chorus	Insert	Stereo	(p. 32) [Space Chorus]
P011	St Phaser	Stereo Phaser	Insert	Stereo	(p. 33) [Phaser] → [3 Band EQ]
P012	AnalogPhaser	Analog Phaser	Insert	Stereo	(p. 34) [Analog Phaser]
P013	St Flanger	Stereo Flanger	Insert	Stereo	(p. 35) [Flanger] → [3 Band EQ]
P014	AnalogFlnger	Analog Flanger	Insert	Stereo	(p. 36) [Analog Flanger]
P015	Rotary	Rotary	Insert	Mono	(p. 36) [Noise Suppressor] → [Over Drive] → [Rotary Speaker]
P016	2ch RSS	2ch RSS	Insert	2ch	(p. 37) [RSS 3D Panner]
P017	MicModeling	Mic Modeling	Insert	2ch	(p. 39) [Mic Converter] → [Bass Cut] → [Distance] → [Limiter]
P018	GuitarMulti1	Guitar Multi 1	Insert	Mono	(p. 40) [Compressor] → [Heavy Metal] → [Noise Suppressor] → [Auto Wah] → [GAmp Mdl] → [Flanger] → [Delay]
P019	GuitarMulti2	Guitar Multi 2	Insert	Mono	(p. 40) [Compressor] → [Distortion] → [Noise Suppressor] → [Auto Wah] → [GAmp Mdl] → [Flanger] → [Delay]
P020	GuitarMulti3	Guitar Multi 3	Insert	Mono	(p. 40) [Compressor] → [OverDrive] → [Noise Suppressor] → [Auto Wah] → [GAmp Mdl] → [Flanger] → [Delay]
P021	GuitarAmpMdl	Guitar Amp Modeling	Insert	Mono	(p. 42) [Noise Suppressor] → [G-Amp] → [Speaker Modeling]
P022	Vocal Multi	Vocal Multi	Insert	Mono	(p. 44) [Noise Suppressor] → [Limiter/De-esser] → [Enhancer] → [3 Band EQ] → [Pitch Shifter] → [Delay] → [Chorus]
P023	Voice Trans	Voice Transformer	Insert	Mono	(p. 45) [Voice Transformer] → [Reverb]
P024	Vocal Cancel	Vocal Canceled	Insert	Stereo	(p. 46) [Vocal Canceler] → [3 Band EQ]
P025	Vocoder	Vocoder	Insert	Mono	(p. 47) [10 Band Vocoder] → [Chorus]
P026	Vocoder2 (19)	Vocoder2 (19)	Insert	Mono	(p. 48) [19 Band Vocoder] → [Chorus]
P027	Lo-Fi Proces	Lo-Fi Processor	Insert	Stereo	(p. 49) [Lo-Fi Processor] → [Real time Modify Filter] → [Noise Suppressor]
P028	3BndIsolator	3band Isolator	Insert	Stereo	(p. 50) [3 Band Isolator]
P029	DualComp/Lim	Dual Compressor/Limiter	Insert	2ch	(p. 51) [Compressor/Limiter] → [Noise Suppressor]
P030	ParametricEQ	Parametric Equalizer	Insert	2ch	(p. 52) [4 Band EQ]
P031	Graphic EQ	Graphic Equalizer	Insert	2ch	(p. 53) [10 Band EQ]
P032	Hum Canceler	Hum Canceler	Insert	Stereo	(p. 53) [Hum Canceler] → [Noise Suppressor]
P033	Stereo Multi	Stereo Multi	Insert	Stereo	(p. 54) [Noise Suppressor] → [Compressor/Limiter] → [Enhancer] → [3 Band EQ]
P034	Speaker Mdl	Speaker Modeling	Insert	Stereo	(p. 55) [SP Modeling] → [Bass Cut Freq] → [Lo Freq Trim] → [Hi Freq Trim] → [Limiter]
P035	MastringTool	Mastering Tool Kit	insert	Stereo	(p. 56) [4 Band EQ] → [Bass Cut] → [Enhancer] → [3 Band Expander] → [3 Band Compressor] → [Mixer] → [Limiter] → [Soft Clip]

■ Reverb (18 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P036	RV:LargeHall	Reverb	Loop	Mono	Large concert hall reverberation.
P037	RV:SmallHall	Reverb	Loop	Mono	Small hall reverberation.
P038	RV:Strings	Reverb	Loop	Mono	Reverberation optimized for delicate highs of strings.
P039	RV:PianoHall	Reverb	Loop	Mono	Rich and warm reverberation optimized for pianos.
P040	RV:Orch Room	Reverb	Loop	Mono	Reverberation of large-capacity rooms such as big banquet halls.
P041	RV:VocalRoom	Reverb	Loop	Mono	Room reverb suitable for vocals and chorus.
P042	RV:MediumRm	Reverb	Loop	Mono	Warm and naturally spacious room reverb.
P043	RV:LargeRoom	Reverb	Loop	Mono	Modeled acoustics of wide rooms with lots of reverberation.
P044	RV:CoolPlate	Reverb	Loop	Mono	Distinctive bright plate reverb.
P045	RV:Short Plt	Reverb	Loop	Mono	Shorter plate reverb.
P046	RV:Vocal Plt	Reverb	Loop	Mono	Crystal-clear reverb optimized for vocals.
P047	RV:Soft Amb.	Reverb	Loop	Mono	Modeled reverberation of a room with minimal wall reflections.
P048	RV:Room Amb.	Reverb	Loop	Mono	Natural reverberation of rooms with good acoustics, suitable for drums and guitars.
P049	RV:Cathedral	Reverb	Loop	Mono	Acoustics of a very large, high-ceilinged church.
P050	RV:Long Cave	Reverb	Loop	Mono	Modeled reverberation of deep caves.
P051	RV:GarageDr.	Reverb	Loop	Mono	Natural reverb that enhances unique drum sounds.
P052	RV:Rock Kick	Reverb	Loop	Mono	Reverb with many low-frequency components, suitable for rock kicks.
P053	RV:RockSnare	Reverb	Loop	Mono	Rich and thick sounding reverb suitable for rock snares.

■ Reverb2 (20 presets)

* “Reverb” and “Reverb2” use different algorithms with different sound characters.

No.	Patch Name	Algorithm	Type	Input	Comment
P054	R2:LargeHall	Reverb2	Loop	Mono	Large concert hall reverberation.
P055	R2:SmallHall	Reverb2	Loop	Mono	Small hall reverberation.
P056	R2:Strings	Reverb2	Loop	Mono	Reverberation optimized for delicate highs of strings.
P057	R2:PianoHall	Reverb2	Loop	Mono	Rich and warm reverberation optimized for pianos.
P058	R2:Orch Room	Reverb2	Loop	Mono	Reverberation of large-capacity rooms such as big banquet halls.
P059	R2:VocalRoom	Reverb2	Loop	Mono	Room reverb suitable for vocals and chorus.
P060	R2:MediumRm	Reverb2	Loop	Mono	Warm and naturally spacious room reverb.
P061	R2:LargeRoom	Reverb2	Loop	Mono	Modeled acoustics of wide rooms with lots of reverberation.
P062	R2:CoolPlate	Reverb2	Loop	Mono	Distinctive bright plate reverb.
P063	R2:Short Plt	Reverb2	Loop	Mono	Shorter plate reverb.
P064	R2:Vocal Plt	Reverb2	Loop	Mono	Crystal-clear reverb optimized for vocals.
P065	R2:Soft Amb.	Reverb2	Loop	Mono	Modeled reverberation of a room with minimal wall reflections.
P066	R2:Room Amb.	Reverb2	Loop	Mono	Natural reverberation of rooms with good acoustics, suitable for drums and guitars.
P067	R2:Cathedral	Reverb2	Loop	Mono	Acoustics of a very large, high-ceilinged church.
P068	R2:Long Cave	Reverb2	Loop	Mono	Modeled reverberation of deep caves.
P069	R2:GarageDr.	Reverb2	Loop	Mono	Natural reverb that enhances unique drum sounds.
P070	R2:Rock Kick	Reverb2	Loop	Mono	Reverb with many low-frequency components, suitable for rock kicks.
P071	R2:RockSnare	Reverb2	Loop	Mono	Rich and thick sounding reverb suitable for rock snares.
P072	R2:BriteGte2	Reverb2	Loop	Mono	A high-density and bright sounding gated reverb. Adjust Threshold.
P073	R2:Fat Gate2	Reverb2	Loop	Mono	A high-density and warm sounding gated reverb. Adjust Threshold.

■ Gate Reverb (4 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P074	RV:BriteGate	Gate Reverb	Loop	Mono	Slightly brighter gate reverb.
P075	RV:Fat Gate	Gate Reverb	Loop	Mono	Dynamic reverb sound with powerful mids and lows.
P076	RV:ReverseGt	Gate Reverb	Loop	Mono	A reverse gate commonly used as a special effect.
P077	RV:PanningGt	Gate Reverb	Loop	Mono	A special effect with gate reverb shifting from left to right.

■ Delay (9 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P078	DL:Short Dly	Delay	Loop	Mono	An ambience effect that adds depth to the sound by doubling.
P079	DL:MediumDly	Delay	Loop	Mono	Natural echo optimized for vocals.
P080	DL:LongDelay	Delay	Loop	Mono	Long delay suited for brass and analog synth solos.
P081	DL:AnalogDly	Delay	Loop	Mono	Analog sound with gradually diminishing feedbacking highs.
P082	DL:Tape Echo	Stereo Delay Chorus	Loop	Stereo	Modeled tape echo with distinctive wow flutter.
P083	DL:Karaoke	Stereo Delay Chorus	Loop	Stereo	Intense reverberation that effectively enhances karaoke vocals.
P084	DL:Multi-Tap	Stereo Delay Chorus	Loop	Stereo	Spacious reflections using positioning delay at any point along the stereo soundfield.
P085	DL:MltTapAmb	Multi Tap Delay	Loop	Mono	An ambience effect using 10 short delay units.
P086	DL:Ping Pong	Multi Tap Delay	Loop	Mono	A special effect using tap delay.

■ Tape Echo 201 (4 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P087	TE:ShortEcho	Tape Echo 201	Loop	Mono	Models short type tape echo.
P088	TE:LongEcho	Tape Echo 201	Loop	Mono	Models long type tape echo.
P089	TE:OldTape	Tape Echo 201	Loop	Mono	Models tape echo using an old tape.
P090	TE:PanEcho	Tape Echo 201	Loop	Mono	Models tape echo in stereo.

■ Chorus (6 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P091	CH:Lt Chorus	Stereo Delay Chorus	Insert	Stereo	Natural stereo chorus with shallow depth for spacious, crystal-clear sound.
P092	CH:Deep Cho	Stereo Delay Chorus	Insert	Stereo	Intense stereo chorus that adds depth and spaciousness to the sound.
P093	CH:DetuneCho	Stereo Pitch Shifter Delay	Insert	Stereo	Chorus with left and right channels separately pitch shift-detuned up and down.
P094	SPCHO:MODE 1	Space Chorus	Insert	Stereo	Models MODE1 of the classic SDD-320 ambience processor.
P095	SPCHO:MODE 2	Space Chorus	Insert	Stereo	Models MODE2 of the classic SDD-320 ambience processor.
P096	SPCHO:MODE 3	Space Chorus	Insert	Stereo	Models MODE3 of the classic SDD-320 ambience processor.

■ Phaser (3 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P097	PH:Lt Phaser	Stereo Phaser	Insert	Stereo	Lighter 4-stage stereo phaser suitable for synth strings.
P098	PH:DeepPhase	Stereo Phaser	Insert	Stereo	Deep phaser effective for electronic piano and clavinet sounds.
P099	AP:FB-Phaser	Analog Phaser	Insert	Stereo	Models analog phaser with oscillation on purpose.

■ Flanger (3 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P100	FL:LtFlanger	Stereo Flanger	Insert	Stereo	Stereo flanger with slight modulation.
P101	FL:Deep Fl	Stereo Flanger	Insert	Stereo	Deeper stereo flanger for metallic jet swooshing sound.
P102	AF:SBF-325	Analog Flanger	Insert	Stereo	Models Roland SBF-325 analog flanger.

■ Pitch Shifter (7 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P103	PS:4thVoice	Vocal Multi	Insert	Mono	Adds sound down a fourth to the direct sound.
P104	PS:ShimmerUD	Stereo Pitch Shifter Delay	Insert	Stereo	A special effect with left channel pitch rising and right channel pitch dropping over time.
P105	VT:M to Fm	Voice Transformer	Insert	Mono	Converts a male voice into a female voice.
P106	VT:Fm to M	Voice Transformer	Insert	Mono	Converts a female voice into a male voice.
P107	VT:Male Duo	Voice Transformer	Insert	Mono	Turns a single male voice into a duet (by adding a female voice).
P108	VT:FemaleDuo	Voice Transformer	Insert	Mono	Turns a single female voice into a duet (by adding a male voice).
P109	VT:Robot	Voice Transformer	Insert	Mono	Special effect like a robot speaking.

* PSD = Pitch Shifter Delay

■ Mic Modeling (29 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P110	MM:57→58	Mic Modeling	Insert	2ch	Converts a general-purpose D. mic to a vocal D. mic. Rich mid/low range.
P111	MM:57→421	Mic Modeling	Insert	2ch	Converts a general-purpose D. mic to a large D. mic. For drums and guitar amp.
P112	MM:57→451	Mic Modeling	Insert	2ch	Converts a general-purpose D. mic to a small C. mic. For acoustic guitar and cymbals.
P113	MM:57→87	Mic Modeling	Insert	2ch	Converts a general-purpose D. mic to a large C. mic. For vocals and acoustic inst.
P114	MM:57→47	Mic Modeling	Insert	2ch	Converts a general-purpose D. mic to a vintage C. mic. For vocals and acoustic inst.
P115	MM:57→Line	Mic Modeling	Insert	2ch	Cancels the characteristics of D.mic, giving the sound a flat frequency response.
P116	MM:DR20→421	Mic Modeling	Insert	2ch	Converts a Roland DR-20 to an instrumental D. mic. For drums and guitar amp.
P117	MM:DR20→451	Mic Modeling	Insert	2ch	Converts a Roland DR-20 to a small C. mic. For acoustic guitar and cymbals.
P118	MM:DR20→87	Mic Modeling	Insert	2ch	Converts a Roland DR-20 to a large C. mic. For vocals and acoustic inst.
P119	MM:10→58	Mic Modeling	Insert	2ch	Converts a headset mic to a vocal D. mic.
P120	MM:10→87	Mic Modeling	Insert	2ch	Converts a headset mic to a large C. mic.
P121	MM:Mini→57	Mic Modeling	Insert	2ch	Converts a miniature C. mic to a general-purpose D. mic.
P122	MM:Mini→87	Mic Modeling	Insert	2ch	Converts a miniature C. mic to a large C. mic.
P123	MM:C3KB→57	Mic Modeling	Insert	2ch	Converts a AKG C3000B to a general-purpose D. mic
P124	MM:C3KB→58	Mic Modeling	Insert	2ch	Converts a AKG C3000B to a vocal D. mic.
P125	MM:C3KB→421	Mic Modeling	Insert	2ch	Converts a AKG C3000B to an instrumental D. mic.
P126	MM:C3KB→451	Mic Modeling	Insert	2ch	Converts a AKG C3000B to a small C. mic.
P127	MM:C3KB→87	Mic Modeling	Insert	2ch	Converts a AKG C3000B to a large C. mic.
P128	MM:C3KB→47	Mic Modeling	Insert	2ch	Converts a AKG C3000B to a vintage C. mic.
P129	MM:C3KB→Line	Mic Modeling	Insert	2ch	Cancels the characteristics of AKG C3000B, giving the sound a flat frequency response.
P130	MM:Kick&Snr1	Mic Modeling	Insert	2ch	For the bass drum (L channel) and snare drum (R channel) of a drum set (1).
P131	MM:Kick&Snr2	Mic Modeling	Insert	2ch	For the bass drum (L channel) and snare drum (R channel) of a drum set (2).
P132	MM:H.Hat&Tom	Mic Modeling	Insert	2ch	For the hi-hat (L channel) and tom (R channel) of a drum set.
P133	MM:Dr.OvrTop	Mic Modeling	Insert	2ch	A patch for placing mics above the drums mainly to mic the cymbals.
P134	MM:Dr.OvrAll	Mic Modeling	Insert	2ch	A patch for placing mics above the front of the drums to mic the entire set.
P135	MM:Ac.Guitar	Mic Modeling	Insert	2ch	For acoustic guitar. InsertL: brighter, InsertR: warmer.
P136	MM:StudioVcl	Mic Modeling	Insert	2ch	For vocals. InsertL: natural, InsertR: Rock.
P137	MM:StereoMic	Mic Modeling	Insert	2ch	Gives time-lag to a sound miked in stereo, emphasizing spaciousness.
P138	MM:Ambience	Mic Modeling	Insert	2ch	Models ambience mics. Add reverb and mix with original source.

* D. mic = dynamic microphone, C. mic = condenser microphone

■ Vocal (10 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P139	VO:Vocal Fx	Vocal Multi	Insert	Mono	Basic setup for recording/mixdown of vocals.
P140	VO:JazzVocal	Vocal Multi	Insert	Mono	A natural sounding jazz club-like ambience for warm reverb well-suited for vocals.
P141	VO:RockVocal	Vocal Multi	Insert	Mono	Sound featuring limiter/enhancer processing as well as a unison effect.
P142	VO:Narration	Vocal Multi	Insert	Mono	An effect with heavy compression, used for narration.
P143	VO:BigChorus	Vocal Multi	Insert	Mono	A spacious-sounding stereo effect similar to increasing the number of vocalists.
P144	VO:Club DJ	Vocal Multi	Insert	Mono	A club DJ-tailored effect that uses a pitch shifter to make voices lower.
P145	VO:AM-Radio	Vocal Multi	Insert	Mono	Sound featuring hard compression and narrower frequency range.
P146	VO:PlusTwo	Stereo Pitch Shifter Delay	Insert	Stereo	A special effect that adds two more voices using a pitch shifter.
P147	VO:Robot Fx	Stereo Pitch Shifter Delay	Insert	Stereo	SF movie-like effect using a pitch shifter.
P148	VO:Bull Horn	Guitar Multi 3	Insert	Mono	Modeled effect of sound produced from a Bull Horn or old radio.

* PSD = Pitch Shifter Delay

■ Guitar (11 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P149	GT:Rock Lead	Guitar Multi 2	Insert	Mono	Straight distortion sound with delay.
P150	GT:LA Lead	Guitar Multi 2	Insert	Mono	Lead guitar sound with tasty compression and chorus applied.
P151	GT:MetalLead	Guitar Multi 1	Insert	Mono	Metal sound with dynamic, ultrahigh gain distortion.
P152	GT:Metal Jet	Guitar Multi 1	Insert	Mono	Distortion together with a metallic effect achieved by flanging.
P153	GT:CleanRthm	Guitar Multi 1	Insert	Mono	Clean sound with compression and chorus applied.
P154	GT:DiedClean	Vocal Multi	Insert	Mono	Superclean sound like line recording directly into the console.
P155	GT:Delay Rif	Guitar Multi 2	Insert	Mono	Delay sounds at dotted eighth note intervals when a 120 BPM riff is played.
P156	GT:Acoustic	Vocal Multi	Insert	Mono	Optimized for electroacoustic guitars.
P157	GT:BluesDrv.	Guitar Multi 3	Insert	Mono	Crunchy overdrive sound suited to blues and R&R.
P158	GT:Liverpool	Guitar Multi 3	Insert	Mono	Crunchy sound often heard on '60s British rock.
P159	GT:Country	Guitar Multi 3	Insert	Mono	Clean sound featuring distinctive compression and delay.

■ Guitar Amp Modeling (9 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P160	GA:JazChorus	Guitar Amp Modeling	Insert	Mono	Roland JC-120 amp. Sounds more authentic when used with chorus for mixdown.
P161	GA:CleanTwin	Guitar Amp Modeling	Insert	Mono	U.S. tube combo amp circa "black panel."
P162	GA:Vin.Tweed	Guitar Amp Modeling	Insert	Mono	'50s U.S. tube amp overdrive.
P163	GA:BluesDrv.	Guitar Amp Modeling	Insert	Mono	Old British amp crunchy overdrive.
P164	GA:MatchLead	Guitar Amp Modeling	Insert	Mono	Hot-rodded British combo amp.
P165	GA:StudioCmb	Guitar Amp Modeling	Insert	Mono	Favorite late '70s amp of studio musicians.
P166	GA:JMP-Stack	Guitar Amp Modeling	Insert	Mono	Late '60s British stacks.
P167	GA:SLDN Lead	Guitar Amp Modeling	Insert	Mono	An '80s amp known for versatile distortion.
P168	GA:5150 Lead	Guitar Amp Modeling	Insert	Mono	Big tube amp standard for American heavy metal.

* Mdl. = Modeling

■ Bass (6 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P169	BS:DI'edBass	Vocal Multi	Insert	Mono	Slight limiting and equalization optimized, ideal for line recording applications.
P170	BS:MikedBass	Guitar Amp Modeling	Insert	Mono	A miked speaker box with four 12"s.
P171	BS:CompBass	Stereo Multi	Insert	Stereo	Hard-compressed sound optimized for slaps.
P172	BS:Fat Bass	Mastering Tool Kit	Insert	Stereo	Enhanced low end. Edit LoMid EQ to suit the source instruments.
P173	BS:Auto Wah	Guitar Multi 2	Insert	Mono	Synth bass like sound added with auto wah essential for '70s funk.
P174	BS:FX Bass	Stereo Delay Chorus	Insert	Stereo	Solo-optimized sound with depth and spaciousness added through delay and chorus.

* Mdl. = Modeling

■ Special Effects (11 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P175	LFP:BreakBts	Lo-Fi Processor	Insert	Stereo	Reproduces the tonal change produced by lowering the bit/rate of a sampled sound.
P176	LFP:1bitDist	Lo-Fi Processor	Insert	Stereo	Extreme distortion sound produced by lowering the number of bits.
P177	LFP:TeknoFlt	Lo-Fi Processor	Insert	Stereo	Emphasizes the out-of-band noise that occurs with low sampling rates.
P178	LFP:Reso Flt	Lo-Fi Processor	Insert	Stereo	Filter with resonance as found on synthesizers. Adjust CutOff.
P179	LFP:FatBotom	Lo-Fi Processor	Loop	Stereo	Add heavy low-range for the groove. Mix with original source.
P180	VOP22:M19Band	Vocoder2 (19)	Insert	Mono	Clear and crisp vocoder.
P181	VOP22:S19Band	Vocoder2 (19)	Insert	Mono	Special stereo vocoder with long decay.
P182	HC:Quiet60Hz	Hum Canceled	Insert	Stereo	Cancels 60 Hz hum noise.
P183	HC:Quiet50Hz	Hum Canceled	Insert	Stereo	Cancels 50 Hz hum noise.
P184	VC:Vocal Cnl	Vocal Canceled	Insert	Stereo	Cancels a vocal located in the center.
P185	VC:CenterCnl	Vocal Canceled	Insert	Stereo	Cancel all sound located in the center.

■ Parametric Equalizer (26 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P186	PEQ:BassDrum	Parametric Equalizer	Insert	Stereo	For bass drum. Adjust LowQ and HiG.
P187	PEQ:RockBD	Parametric Equalizer	Insert	Stereo	For bass drum. A sound suitable for rock with mid-lows emphasized.
P188	PEQ:RockSD	Parametric Equalizer	Insert	Stereo	For snare drum. Drops the mid-lows and emphasizes the attack and snares.
P189	PEQ:RimShot	Parametric Equalizer	Insert	Stereo	For rim shot. Emphasizes the feeling of attack unique to a rim shot.
P190	PEQ:Toms	Parametric Equalizer	Insert	Stereo	For toms. Adjust LowF and LowMidF.
P191	PEQ:Hi Hat	Parametric Equalizer	Insert	Stereo	For the crisper hi-hat. Adjust bell sound with HiMidG.
P192	PEQ:Cymbals	Parametric Equalizer	Insert	Stereo	For cymbals. Emphasizes the difference in tone between cymbals and their clarity.
P193	PEQ:Overhead	Parametric Equalizer	Insert	Stereo	For drum kit. Use when miking the sound of the entire kit.
P194	PEQ:Bass 1	Parametric Equalizer	Insert	Stereo	For electric bass. Wide-range and tight bass sound.
P195	PEQ:Bass 2	Parametric Equalizer	Insert	Stereo	For electric bass. Fatter and with more punch than P194. For rock.
P196	PEQ:SlapBass	Parametric Equalizer	Insert	Stereo	For electric bass. Settings that emphasize the accent of pulled notes with slap technique.
P197	PEQ:Sax	Parametric Equalizer	Insert	Stereo	For alto/soprano sax. Lower HiG for mellow sound.
P198	PEQ:Bari.Sax	Parametric Equalizer	Insert	Stereo	For baritone sax. Adjust LoMidF.
P199	PEQ:ElecGtr	Parametric Equalizer	Insert	Stereo	Settings that keep the lead guitar from being buried in the mix.
P200	PEQ:NylonGtr	Parametric Equalizer	Insert	Stereo	Emphasize the tone of nylon strings. Adjust fret sound with HiG.
P201	PEQ:BluesGtr	Parametric Equalizer	Insert	Stereo	Adds a delicate nuance suitable when playing blues on an acoustic guitar.
P202	PEQ:SlideGtr	Parametric Equalizer	Insert	Stereo	Adds a rich feel to acoustic slide guitar. Adjust HiF.
P203	PEQ:LineGtr	Parametric Equalizer	Insert	Stereo	For piezo pickups. Adjust brightness with HiG.
P204	PEQ:Male	Parametric Equalizer	Insert	Stereo	Improves the tone quality of a male vocal. Adjust HiG.
P205	PEQ:RockMale	Parametric Equalizer	Insert	Stereo	Equalizer that adds energy to a male vocal. Best for rock. Try with Comp.
P206	PEQ:Female	Parametric Equalizer	Insert	Stereo	Improves the tone quality of a female vocal. Adjust LoMidG.
P207	PEQ:RockFeml	Parametric Equalizer	Insert	Stereo	Equalizer that adds energy to a female vocal. Best for rock. Try with Comp.
P208	PEQ:Narrator	Parametric Equalizer	Insert	Stereo	Standard equalizer for male narration. Brings out the character of the voice.
P209	PEQ:Organ	Parametric Equalizer	Insert	Stereo	Settings to bring out the character of a church organ.
P210	PEQ:St.Piano	Parametric Equalizer	Insert	Stereo	For miking piano in stereo. Left: low range, right: high range.
P211	PEQ:SmallCho	Parametric Equalizer	Insert	Stereo	Settings that bring out the chorus without letting it conflict with the main vocal.

■ Graphic Equalizer (3 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P212	GEQ:TotalEQ1	Graphic Equalizer	Insert	Stereo	Boosts the low and high ranges.
P213	GEQ:TotalEQ2	Graphic Equalizer	Insert	Stereo	Attenuates the lows and highs to narrow the range, tightening up the sound.
P214	GEQ:Space EQ	Graphic Equalizer	Insert	Stereo	Special settings that turn a monaural source into stereo.

■ Stereo Multi (5 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P215	CL:Comp	Stereo Multi	Insert	Stereo	Stereo type compression optimized for broadcast mixing.
P216	CL:Limiter	Stereo Multi	Insert	Stereo	A convenient effect for analog mastering because it can limit peak signals.
P217	EQ:Loudness	Stereo Multi	Insert	Stereo	Applies EQ curve with slightly boosted lows and highs.
P218	EQ:Fat Dance	Stereo Multi	Insert	Stereo	Hard compression plus equalizing for dance music.
P219	EQ:ThinJingl	Stereo Multi	Insert	Stereo	Limiter and EQ processing for FM radio and TV broadcasting.

■ Speaker Modeling (11 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P220	SPM:SuperFlt	Speaker Modeling	Insert	Stereo	Modeling is used to compensate the DS-90, to produce an even flatter sound with a wider range.
P221	SPM:P.GenBlk	Speaker Modeling	Insert	Stereo	A widely used model of powered monitors (two-way type, with a woofer diameter of 170 mm (6-1/2 inches)).
P222	SPM:P.E-Bs	Speaker Modeling	Insert	Stereo	Powered monitors characterized by a bright tone.
P223	SPM:P.Mack	Speaker Modeling	Insert	Stereo	Powered monitors characterized by an extended low-frequency response.
P224	SPM:SmalCube	Speaker Modeling	Insert	Stereo	Small full-range speakers widely used in recording studios.
P225	SPM:WhiteCon	Speaker Modeling	Insert	Stereo	Sealed enclosure two-way speakers known for their white woofers and widely used in recording studios.
P226	SPM:W.C+tiss	Speaker Modeling	Insert	Stereo	A more mild sound, with tissue paper affixed over the tweeters of the above "White Cone" speakers.
P227	SPM:S.Radio	Speaker Modeling	Insert	Stereo	Small pocket-type radio.
P228	SPM:SmallTV	Speaker Modeling	Insert	Stereo	Speakers built into a 14 inch size television.
P229	SPM:BoomBox	Speaker Modeling	Insert	Stereo	Radio cassette recorder.
P230	SPM:BB.LowBs	Speaker Modeling	Insert	Stereo	Radio cassette recorder with the Low Boost switched on.

■ Mastering Tool Kit (19 presets)

No.	Patch Name	Algorithm	Type	Input	Comment
P231	MTK:Mixdown	Mastering Tool Kit	Insert	Stereo	Mix down for CD
P232	MTK:PreMastr	Mastering Tool Kit	Insert	Stereo	Pre-master for video editing
P233	MTK:LiveMix	Mastering Tool Kit	Insert	Stereo	Final mix of live recording
P234	MTK:PopMix	Mastering Tool Kit	Insert	Stereo	for Pop music
P235	MTK:DanceMix	Mastering Tool Kit	Insert	Stereo	for Dance music
P236	MTK:JinglMix	Mastering Tool Kit	Insert	Stereo	Jingle for FM radio
P237	MTK:HardComp	Mastering Tool Kit	Insert	Stereo	Heavy compression
P238	MTK:SoftComp	Mastering Tool Kit	Insert	Stereo	Light compression
P239	MTK:ClnComp	Mastering Tool Kit	Insert	Stereo	Eliminating the background noise and clean up the sound
P240	MTK:DnceComp	Mastering Tool Kit	Insert	Stereo	Compression for dance music
P241	MTK:OrchComp	Mastering Tool Kit	Insert	Stereo	Compression for orchestra
P242	MTK:VocalCmp	Mastering Tool Kit	Insert	Stereo	Compression for vocal
P243	MTK:Acoustic	Mastering Tool Kit	Insert	Stereo	Acoustic guitar
P244	MTK:RockBand	Mastering Tool Kit	Insert	Stereo	for Rock band
P245	MTK:Orchestr	Mastering Tool Kit	Insert	Stereo	for Orchestra
P246	MTK:LoBoost	Mastering Tool Kit	Insert	Stereo	Enhancing the low frequency range
P247	MTK:Brighten	Mastering Tool Kit	Insert	Stereo	Enhancing the high frequency range
P248	MTK:DJsVoice	Mastering Tool Kit	Insert	Stereo	DJ Microphone
P249	MTK:PhoneVox	Mastering Tool Kit	Insert	Stereo	Telephone voice modeling

Algorithm List

This section describes the effects associated with the respective algorithms and internal terminations. Read this section when you need to check the algorithms in the built-in library (pre-set library) or before creating a new library.

Reverb

This feature adds reverberation to the sound to model the size of space such as a hall and a room.

Sound types

Sounds around us can be analyzed and categorized into three types: direct sounds, early reflections and reverberation. A direct sound is the sound that reaches the listener directly from the source. An early reflection is the sound that has rebounded from the wall once, twice or several times. A reverberation is the sound we hear after sound reflections are repeated many times.

Relationship between sound and time

Reflected sound reach the listener in the following sequence. The pre-delay is the time from when the direct sound is heard until the reverb is heard. The reverb time is the time over which the reverb decays to silence.

Reverb sound quality

The sound quality of a reverb is affected by materials of the walls and other members from which the sound is rebounded. This is because the degree of attenuation in the High and low frequency bands varies. HF-Damp Gain and LF-Damp Gain are provided so that you can adjust such attenuation degrees. The smaller the value becomes, the steeper the degree of attenuation of the reverberation becomes severer in the High and low frequency bands.

In addition, in order to obtain softer reverberation, make the frequency lower by using HF-Damp Frequency (High Freqeq-Damp Freq). In order to obtain harder reverberation, make the frequency Higher by using LF-Damp Frequency (LoFreq-Damp Freq).

Parameter (full name)	Setting	Function
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain	-12- +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3-10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. *1
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shelving type or peaking type).
Mid Gain (Middle Gain)	-12- +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200-8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3-10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12- +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4-20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3-10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. *1
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shelving type or peaking type).
Level (Output Level)	0-100	Sets the volume after passing through the equalizer.

Reverb:	Adds reverberation.	
Room Size (Room Size)	5-40 m	Sets the size of the room.
Time (Reverb Time)	0.1-32.0 sec.	Sets the time length of the reverb sound.
PreDLY (Pre-Delay)	0-200 ms	Sets the time until the reverb sound appears.
Difusi (Diffusion)	0-100	Sets the extent of diffusion of the early reflection sound.
Densy (Density)	0-100	Sets the density of the reverb sound.
ERLvl (Early Reflection Level)	0 to100	Sets the volume of the early reflection.
LF Damp Gain (LF-Damp Gain)	-36-0 dB	Sets the degree of attenuation of the reverb in the low frequency band.
LF Damp Freq (LF-Damp Frequency)	50-4000 Hz	Sets the frequency on which the reverb starts attenuating in the low frequency band.
HF Damp Gain (HF-Damp Gain)	-36-0 dB	Sets the degree of attenuation of the reverb in the High frequency band.
HF Damp Freq (HF-Damp Frequency)	1.0-20.0 kHz	Sets the frequency on which the reverb starts attenuating in the High frequency band.
HiCF (High Cut Frequency)	0.2-20.0 kHz	Sets the frequency for which the High frequency band elements of the reverb are cut.
FX Lvl (Effect Level)	-100-100	Sets the volume of the reverb sound.
DirLvl (Direct Level)	-100-100	Sets the volume of the direct sound.

*1: If Low Type (Lo Type) or High Type (Hi Type) is set to "Shlv (Shelving Type)," the setting for Lo Q or High Q is invalid.

* "Reverb" cannot be used on EFFECT2, 4, and 6 (even-numbered effects).

Reverb2

This gate reverb works in either of two modes of gate operation (Gate/Ducking). In the Gate mode, the gate opens when a certain volume (Threshold Level) is exceeded while in the Ducking mode, the gate opens when the volume becomes as low as or lower than Threshold Level. You can use two reverbs (FX1 and FX2) with different settings, or use it in combination with a previous reverb.

Reverb types

There are five reverb types: You can choose the type with Reverb Type.

- Room1: Ordinary room reverb
- Room2: Room reverb with a softer tone compared with Room1
- Hall1: Ordinary hall reverb
- Hall2: Hall reverb with a softer tone compared with Hall1
- Plate: Plate reverb

Selecting Gate type

Reverb sounds have different effects depending on the gate operation types. Use Gate Mode to select the type.

- Gate: The gate opens when the volume of the direct sound exceeds the value set with Threshold Level (Thres). The gate closes when the volume drops below the Threshold Level value.
- Duckn: Operates in the opposite manner as in the "Gate" mode. The gate closes when the volume of the direct sound exceeds the value set with Threshold Value. The gate opens when the volume becomes as low as or lower than the Threshold Level value.

Parameter (full name)	Setting	Function
Rev (Reverb 2):		
Sw (Switch)	On, Off	Turns the reverb on or off.
Type (Reverb Type)	See the column on the previous page.	Sets the reverb type.
Gate (Gate)	On, Off	Opens or closes the gate.
Mode (Gate Mode)	Gate, Ducking	Sets the gate operation type.
Time (Reverb Time)	0.1–10.0 sec.	Sets the length (time) of the reverb sound.
PreDLY (Pre-Delay)	0–200 ms	Sets the time until the reverb sound is output.
Density (Density)	0–100	Sets the density of the reverb sound.
HPF (High Pass Filter)	Thru, 20 - 2000 Hz	Sets the frequency at which HPF starts taking effect. Set this to "Thru" if HPF is to be disabled.
LPF (Low Pass Filter)	1.0–20.0 kHz, Thru	Sets the frequency at which LPF starts taking effect. Set this to "Thru" if LPF is to be disabled.
Thresh (Threshold)	0–100	Sets the reference volume for controlling gate operations.
Attack (Attack)	1–100	Sets the time from when the direct sound level exceeds the threshold level until when the gate is completely open.
Releas (Release)	1–100	Sets the time from when the hold time has elapsed until the sound is completely muted.
HoldT (Hold Time)	1–100	Sets the time from when the input falls below the threshold level until when the release begins.
FX Lvl (Effect Level).	0–100	Sets the volume of the reverb sound.
DirLvl (Direct Level)	0–100	Sets the volume of the direct sound.
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain (Low Gain)	-12– +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3–10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. *1
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
Mid Gain (Middle Gain)	-12– +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200–8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3–10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12– +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4–20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3–10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. *1
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Output Level)	0–100	Sets the volume after passing through the equalizer.

*1: If Low Type (Lo Type) or High Type (Hi Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

Gate Reverb

This is a reverb in which the reverberation is muted during its decay. Its reverse mode can be used in conjunction with Accent sounds to obtain sounds like from reverse play back of a tape.

Gate Reverb

Reverb applications

You can select how reverb sounds can be applied by setting up Gate Mode (Mode).

- Normal: Ordinary Gate Reverb
- L->R: The Gate Reverb sound moves from the left to right side.
- R->L: The Gate Reverb sound moves from the right to left side.
- Reverse1: Reverse Gate (effect as if reverb are replayed backward.)
- Reverse2: Reverse Gate that causes the reverb sound to decay midway.

Parameter (full name)	Setting	Function
GRev (Gate Reverb):		
Sw (Switch)	On, Off	Mutes the revert sound midway. Turns the gate reverb on or off.
Mode (Gate Mode)	See the column on the previous page.	Defines how the reverb sound is applied.
Time (Gate Time)	10–400 s	Sets the time from when the reverb sound begins until it is muted.
PreDLY (Pre-Delay)	0–300 ms	Sets the time until the reverb sound appears.
Thick (Thickness)	0–100	Sets the thickness of the reverb sound.
Density	0–100	Sets the density of the reverb sound.
AcDLY (Accent Delay Time)	0–200 ms	Sets the time from when the reverb sound is muted until the accent sound appears.
AcLvl (Accent Level)	0–100	Sets the volume of the accent sound.
AcPan (Accent Pan)	L63–R63	Sets the pan of the accent sound.
FX Lvl (Effect Level).	-100–100	Sets the volume of the gate reverb sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain (Low Gain)	-12– +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3–10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. *1
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
Mid Gain (Middle Gain)	-12– +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200–8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3–10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12– +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4–20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3–10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. *1
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Output Level)	0–100	Sets the volume after passing through the equalizer.

*1: If Low Type (Lo Type) or High Type (Hi Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

* "Gate Reverb" cannot be used on EFFECT2, 4, and 6 (even-numbered effects).

Delay

Delay is a feature to add a delayed sound to the direct sound in order to add thickness to the sound or to yield a special effect.

Delay sounds and the spread of sound

As a delay is output in the stereo mode, it sounds from the right and the left sides. These delay sounds can be adjusted by setting Delay shift (shift). Set it to the value on the L side to cause the left-side delay sound lag behind and to the value on the R side to cause the right-side delay sound lag behind. Set shift to "0" to make the delay sounds on the both sides simultaneously. Setting the right and left delay times to different values yields more spreading effect.

* The sum of the Delay Time value and the Delay shift value should not exceed the setting range of Delay Time. For example, if the setting range of Delay Time is 0 to 1200 ms and Delay Time is set to 1000 ms, the setting range of Delay Shift should be L200 to R200 ms.

Delay repetition

Delay feedback means to return the delay sound to the Delay input. The amount of feedback is set with FBLevel (Feedback Level). The greater this value becomes, the more times the delay sound is repeated. Setting this level to a negative value inverts the phase. Excessively large values may cause oscillation.

Parameter (full name)	Setting	Function
Delay: Adds a delayed sound to the direct sound, adding depth to the sound or creating special effects.		
Sw (Switch)	On, Off	Turns the delay on or off.
Time (Delay Time)	0–1200 ms	Sets the time from direct sound until when the delay sound is heard. *1
Shift (Delay Shift)	L1200–0–R1200 ms	Sets the delay time difference between the right and left delay sounds.
Lch FeedbackLv1 (Lch Feedback Level)	-100–100	Sets the amount of the left-side delay should be returned to the delay input.
Rch FeedbackLv1 (Rch Feedback Level)	-100–100	Sets the amount of the right-side delay should be returned to the delay input.
LF Damp Gain (LF-Damp Gain)	-36–0 dB	Sets the degree of attenuation in the low frequency band for the delay sound fed back.
LF Damp Freq (LF-Damp Frequency)	50–4000 Hz	Sets the frequency at which attenuation in the low frequency band starts to the delay sound fed back.
HF Damp Gain (HF-Damp Gain)	-36–0 dB	Sets the degree of attenuation in the High frequency band for the delay sound fed back.
HF Damp Freq (HF-Damp Frequency)	1.0–20.0 kHz	Sets the frequency at which attenuation in the High frequency band starts to the delay sound fed back.
Lch FXLv1 (Lch Effect Level)	-100–100	Sets the volume for the left-side delay sound.
Rch FXLv1 (Rch Effect Level)	-100–100	Sets the volume for the right-side delay sound.
DirLv1 (Direct Level)	-100–100	Sets the volume of the direct sound.
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain (Low Gain)	-12– +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3–10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. *2
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
Mid Gain (Middle Gain)	-12– +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200–8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3–10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12– +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4–20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3–10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. *2
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Output Level)	0–100	Sets the volume after passing through the equalizer.

*1: The sum of the Delay Time (Time) value and the Delay Shift (Shift) value should not exceed the setting range of Delay Time. For example, if Delay Time is set to 1000 ms, the setting range of Delay Shift is L200 to R200 ms.

*2: If Low Type (Lo Type) or Hi Type (High Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

Stereo Pitch Shifter Delay

Changes the pitch of the direct sound. Corrects vocals out of tune or adds thickness to the sound by mixing the direct sound and a sound at a shifted pitch.

Setting up pitch

Chromatic Pitch (Chromatic) is used for major pitch variation while Fine Pitch (Fine) is used for fine adjustment. Setting up slightly different pitches for the right and left gives thickness to the sound.

Parameter (full name)	Setting	Function
PShift (Pitch Shifter Delay) : Shifts the pitch.		
Sw (Switch)	On, Off	Turns the pitch shifter on or off.
Lch Chroma Pitch (Lch Chromatic Pitch)	-12-12	Sets the left-side pitch variation (by semitone).
Rch Chroma Pitch (Rch Chromatic Pitch)	-12-12	Sets the right-side pitch variation (by semitone).
Lch Fine Pitch	-100-100	Sets the left-side pitch variation (by cent).
Rch Fine Pitch	-100-100	Sets the right-side pitch variation (by cent).
Lch PreDly (Lch Pre-Delay)	0-50 ms	Sets the time from when the direct sound is output until when the left-side sound at a shifted pitch is output.
Rch PreDly (Rch Pre-Delay)	0-50 ms	Sets the time from when the direct sound is output until when the right-side sound at a shifted pitch is output.
Lch FBDly (Lch Feedback Delay Time)	0-500 ms	Sets the feedback repetition cycle for the left-side delay sound.
Rch FBDly (Rch Feedback Delay Time)	0-500 ms	Sets the feedback repetition cycle for the right-side delay sound.
Lch FeedbackLvl (Lch Feedback Level)	-100-100	Sets the amount of the left-side sound at a shifted pitch should be returned to the left pitch shifter input.
Rch FeedbackLvl (Rch Feedback Level)	-100-100	Sets the amount of the right-side sound at a shifted pitch should be returned to the right-side pitch shifter input.
Lch CrossFeedbackLvl (Lch Cross-Feedback Level) input.	-100-100	Sets the amount of the left-side sound at a shifter pitch should be returned to the right-side pitch shifter input.
Rch CrossFeedbackLvl (Rch Cross-Feedback Level) input.	-100-100	Sets the amount of the right-side sound at a shifted pith should be returned to the left-side pitch shifter input.
FX Lvl (Effect Level)	-100-100	Sets the volume of the sound at a shifter pitch.
DirLvl (Direct Level)	-100-100	Sets the volume of the direct sound.
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain (Low Gain)	-12- +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3-10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. *1
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
Mid Gain (Middle Gain)	-12- +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200-8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3-10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12- +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4-20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3-10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. *1
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Output Level)	0-100	Sets the volume after passing through the equalizer.

*1: If Low Type (Lo Type) or High Type (Hi Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

Delay RSS

The right-side, left-side and center Delay sounds can be set separately. As RSS (p. 37) is connected to both the right and left outputs, the sound image of the sound from the left-side channel is localized at 90° to the left and that of the sound from the right-side channel at 90° to the right. The center Delay output can receive the Feedback effect.

Parameter (full name)	Setting	Function
DlyRSS (Delay RSS):	Gives three-dimensional location to Delay sounds.	
Time (Delay Time)	0–1200 ms	Sets the time from direct sound until when the left and right delay sound is heard.
shift (Delay shift)	L1200–0–R1200 ms	Sets the balance of the right and left delay times.
C.Time (Center Delay Time)	0–1200 ms	Sets the time from direct sound until when the center delay sound is heard.
RSS Lvl (RSS Level)	0–100	Sets the volume of the RSS sound.
C-Lvl (Center Level)	0–100	Sets the volume for the center delay sound.
LF Damp Gain (LF-Damp Gain)	-36–0 dB	Sets the degree of attenuation in the low frequency band for the center delay sound returned to the input.
LF Damp Freq (LF-Damp Frequency)	50–4000 Hz	Sets the frequency at which attenuation in the low frequency band starts for the center delay sound returned to the input.
HF Damp Gain (HF-Damp Gain)	-36–0 dB	Sets the degree of attenuation in the High frequency band for the center delay sound returned to the input.
HF Damp Freq (HF-Damp Frequency)	1.0–20.0 kHz	Sets the frequency at which attenuation in the High frequency band starts for the center delay sound returned to the input.
FBLvl (Feedback Level)	-100–100	Sets the amount of the center delay sound should be returned to the delay input.
FX Lvl (Effect Level)	-100–100	Sets the volume of the delay RSS sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.
Phones (Phones)	Off, On	Set to On when you use headphones Set to Off when you use speakers

*1 Refer to the column “Precautions for using RSS” (p. 38).

* The location is fixed; no azimuth or elevation can be specified.

* Refer to the column “Labeling on RSS product package” (p. 38).

Tape Echo 201

Models the tape echo section of the Roland RE-201 Space Echo. Capable of reproducing very subtle behavior at the measuring instrument level as well as adding subtle changes in pitch due to deterioration of the tape or inconsistency in tape rotation

About replay head

RE-201 is equipped with three heads for creating sounds with different delay times (short, middle and long delay sounds). A desired combination of heads for use can be selected with Mode Selector (Mode). In addition, separate panning features for the three replay heads not included in RE-201 are added.

Parameter (full name)	Setting	Function
Echo (Tape Echo 201):		
Models the tape echo section of the Roland RE-201 Space Echo.		
Sw (Switch)	On, Off	Turns the tape echo on or off.
Mode (Mode Selector)	1-7	Selects a combination of the three replay heads.
Repeat Rate (Repeat Rate)	0-100	Sets the tape speed.
Intnsty (Intensity)	0-100	Sets the number of repeated the delay sound.
Tone Bass (Tone Bass)	-100- +100	Sets the low frequency band tone of the tape echo sound.
Tone Treble (Tone Treble)	-100- +100	Sets the High frequency band tone of Tape Echo sound.
Pan HeadS (Pan Head S)	L63-R63	Sets the pan settings for the short delay play back head.
Pan HeadM (Pan Head M)	L63-R63	Sets the pan settings for the middle delay play back head.
Pan HeadL (Pan Head L)	L63-R63	Sets the pan settings for the long delay play back head.
Tape Dist (Tape Distortion)	0-100	Adds tape-specific distortion.
WowFlutter Rate (Wah-Flutter Rate)	0-100	Sets the fluttering rate of pitch due to deterioration of the tape or inconsistency in the rotation.
WowFlutter Depth (Wah-Flutter Depth)	0-100	Sets the fluttering depth of pitch due to deterioration of the tape or inconsistency in the rotation.
FX Lvl (Effect Level).	0-100	Sets the volume of the tape echo sound.
DirLvl(Direct Level)	0-100	Sets the volume of the direct sound.

Multi Tap Delay

This is a Delay feature that can set 10 delay sounds separately.

Parameter (full name)	Setting	Function
MTD (Multi-Tap Delay):		
Time Ch1 – Ch10 (Delay Time 1 – 10)	0–1200 ms	Sets the time from the direct sound until when the delay sound for channels 1–10 is heard.
Level Ch1 – Ch10 (Delay Level 1 – 10)	0–100	Sets the volumes of delay sounds for channels 1–10.
Pan Ch1 – Ch10 (Pan 1 – 10)	L63–R63	Sets the pan of the delay sounds for channels 1–10.
FBTim (Feedback Delay Time)	0–1200 ms	Sets the repetition frequency for feedback.
FBLvl (Feedback Level)	-100–100	Sets the amount of the delay sound should be returned to the delay input.
FX Lvl (Effect Level)	-100–100	Sets the volume of the delay sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain (Low Gain)	-12– +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3–10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. *1
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
Mid Gain (Middle Gain)	-12– +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200–8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3–10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12– +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4–20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3–10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. *1
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Output Level)	0–100	Sets the volume after passing through the equalizer.

*1: If Low Type (Lo Type) or High Type (Hi Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

Stereo Delay Chorus

Delay and Chorus can be combined to create spaciousness.

How feedback works for Delay and Chorus

Feedback is the feature to return the effect sound to its input. The amount of feedback is set with FBLevel (Feedback Level). Cross-Feedback is the feature to return the effect sound from the right input to the left input and the effect send from the left input to the right. The amount of cross-feedback is set with Cross-Feedback Level (CrossFB Level).

The greater this value becomes, the more times the delay sound is repeated. Setting this level to a negative value inverts the phase.

For feedback of chorus, the greater the value becomes, the more spaciousness and thickness is added to the sound. Setting this level to a negative value inverts the phase.

* Excessively great values may cause oscillation, leading to abnormal noise.

Parameter (full name)	Setting	Function
Delay: Adds a delayed sound to the direct sound, adding depth to the sound or creating special effects.		
Sw (Switch)	On, Off	Turns the delay on or off.
Time (Delay Time)	0–500 ms	Sets the time from direct sound until when the delay sound is heard. ^{*1}
Shift (Delay Shift)	L500–R500 ms	Sets the delay time difference between the right and left delay sounds.
Lch FeedbackLvl (Lch Feedback Level)	-100–100	Sets the amount of the left-side delay should be returned to the left delay input.
Rch FeedbackLvl (Rch Feedback Level)	-100–100	Sets the amount of the right-side delay should be returned to the right delay input.
Lch CrossFeedbackLvl (Lch Cross-Feedback Level)	-100–100	Sets the amount of the left-side delay should be returned to the right delay input.
Rch CrossFeedbackLvl (Rch Cross-Feedback Level)	-100–100	Sets the amount of the right-side delay should be returned to the left delay input.
FX Lvl (Effect Level)	-100–100	Sets the volume of the delay sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.
Chorus: Adds spaciousness and depth to the sound.		
Sw (Switch)	On, Off	Turns the chorus on or off.
Rate (Rate)	0.1–10.0 kHz	Sets the rate of modulation.
Depth (Depth)	0–100	Sets the depth of modulation.
PreDLY (Pre-Delay)	0–50 ms	Sets the time delay from when the direct sound begins until the processed sound is heard.
Lch FeedbackLvl (Lch Feedback Level)	-100–100	Sets the amount of the left-side chorus sound should be returned to the left chorus input.
Rch FeedbackLvl (Rch Feedback Level)	-100–100	Sets the amount of the right-side chorus sound should be returned to the right chorus input.
Lch CrossFeedbackLvl (Lch Cross-Feedback Level)	-100–100	Sets the amount of the left-side chorus sound should be returned to the right chorus input.
Rch CrossFeedbackLvl (Rch Cross-Feedback Level)	-100–100	Sets the amount of the right-side chorus sound should be returned to the left chorus input.
FX Lvl (Effect Level)	-100–100	Sets the volume of the chorus sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain (Low Gain)	-12– +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3–10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. ^{*2}
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
Mid Gain (Middle Gain)	-12– +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200–8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3–10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12– +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4–20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3–10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. ^{*2}
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Output Level)	0–100	Sets the volume after passing through the equalizer.

^{*1}: The sum of the Delay Time (Time) value and the Delay Shift (Shift) value should not exceed the setting range of Delay Time. For example, if the delay time is set to 300 ms, the setting range of Delay Shift is L200 to R200 ms.

^{*2}: If Lo Type (Low Type) or Hi Type (High Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

Chorus RSS

RSS (p. 37) is connected to the Chorus output. The sound image is defined with the sound from the left-side channel located at left 90° and the sound from the right-side channel at right 90°.

- Location is fixed; no azimuth or elevation can be specified.
- Refer to the column “Labeling on RSS product package” (p. 38).

Parameter (full name)	Setting	Function
ChoRSS (Chorus RSS)	: Locates chorus sounds three-dimensionally.	
Rate (Chorus Rate)	0.1–10.0 Hz	Sets the rate of modulation.
Depth (Chorus Depth)	0–100	Sets the depth of modulation.
FX Lvl (Effect Level)	-100–100	Sets the volume of the chorus RSS sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.
Phones (Phones)	Off, On	Set to On when you use headphones Set to Off when you use speakers

*1 Refer to the column “Precautions for using RSS” (p. 38).

Space Chorus

This is a chorus effect simulating Roland SDD-320. The effect to be changed can be reproduced by turning the four buttons 1 to 4 on or off.

Parameter (full name)	Setting	Function
Spcho (Space Chorus):	Adds a chorus effect simulating SDD-320.	
Sw (Switch)	On, Off	Turns the space chorus on or off.
InMode (Input Mode)	Mono, Stereo	Specifies whether the input signal is stereo or mono.
Mode (Space Mode)	1, 2, 3, 4, 1+4, 2+4, 3+4	Sets the chorus variation style.
MixBal (Mix Balance)	0–100	Sets the volume balance between the chorus sound and the direct sound.

Stereo Phaser

A phaser adds a phase-shifted sound to the direct sound, producing a twisting modulation that creates spaciousness and depth.

Phaser and Flanger

The effects obtained with Phaser and Flanger are very similar. Both add twisting modulation effects to the sound, creating spaciousness and depth. In other words, they create something like strongly accentuated chorus.

Phaser provides a unique surge sounding like bubbles coming up. Flanger works mostly in the same mechanism as for Chorus. Besides that, it can create SE-type sounds like ascending/descending sounds of a jet.

Parameter (full name)	Setting	Function
Phs (Phaser):		
Sw (Switch)	Off, On	Turns the phaser on or off.
Mode (Mode)	4, 8, 12, 16	Sets the number of stages in the phaser (p. 34).
Pol (Polarity)	Sync, Inv	Sets the right and left phases of modulation. ^{*3}
Rate (Rate)	0.1–10.0 Hz	Sets the rate at which the phaser will modulate.
Depth (Depth)	0–100	Sets the depth of modulation.
Manual (Manual)	0–100	Sets the reference frequency for adding the surging effect to the sound.
Reso (Resonance)	0–100	Enhances frequency components at around the center frequency set with Manual. ^{*1}
CrossFBLvl (Cross-Feedback Level)	0–100	Sets the amount of the phaser sound to be returned to the channel opposite to the one used for input. ^{*2}
FX Lvl (Effect Level).	-100–100	Sets the volume of the phaser sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain (Low Gain)	-12– +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3–10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. ^{*4}
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
Mid Gain (Middle Gain)	-12– +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200–8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3–10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12– +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4–20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3–10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. ^{*4}
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Output Level)	0–100	Sets the volume after passing through the equalizer.

^{*1:} An excessively great values for Resonance (Reso) may cause oscillation.

^{*2:} An excessively large value for Cross-Feedback level may cause oscillation.

^{*3:} When a mono source has been input, set “Inv” to provide spaciousness to the sound. Set “Sync” for inputting a stereo source.

^{*4:} If Low Type (Lo Type) or High Type (Hi Type) is set to “Shlv (Shlving Type),” the setting for Lo Q or High Q is invalid.

Analog Phaser

Two units of analog phasers are placed in parallel to accommodate stereo sounds. Surges unique to Phaser is created by adding sounds with the phase shifted periodically.

Number of stages of Phaser

As the number of sages of Phaser increases, the number of frequency points suppressed increases as well, generating sharper effect.

Parameter (full name)	Setting	Function
APH (Analog Phaser):		
Sw (Switch)	On, Off	Turns the analog phaser on or off.
Mode (Mode)	8STAGE, 4STAGE	Sets the number of stages of phaser.
Freq (Frequency)	0-100	Sets the center frequency to which the phase effect is applied.
Reso (Resonance)	0-100	Enhances frequency components at around the center frequency set with Frequency.
LFO1/2 Rate (LFO1/2 Rate)	0-100	Sets the phase effect cycle length.
LFO1/2 Dep (LFO1/2 Depth)	0-100	Sets the depth of the phase effect cycle.
LFO1/2 ChB(LFO1/2 Channel B Inverse)Nor Inv		“Inv” indicates that the surge phase should be inverted and “Nor” indicates that it should not be inverted.

Stereo Flanger

Fig (Flanger):

Adds effect similar to ascending/descending sound of a jet.

Sw (Switch)	On, Off	Turns the flanger on or off.	
Pol (Polarity)	Sync, Inv	Sets the right and left phases of modulation.	*3
Rate (Rate)	0.1–10.0 Hz	Sets the rate at which the flanger is modulated.	
Depth (Depth)	0–100	Sets the depth of modulation.	
Manual (Manual)	0–100	Sets the center frequency subject to application of the Flanger effect.	
Reso (Resonance)	0–100	Enhances frequency components at around the center frequency set with Manual.	*1
CrossFBLvl (Cross-Feedback Level)	0–100	Sets the amount of the flanger sound to be returned to the channel opposite to the one used for input.	*2
FX Lvl (Effect Level).	-100–100	Sets the volume of the flanger sound.	
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.	

EQ (Equalizer)

Sw (Switch)	On, Off	Turns the equalizer on or off.	
Low Gain (Low Gain)	-12– +12 dB	Sets the boost/cut amount in the low frequency band.	
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.	
Low Q	0.3–10.0	Sets the width of the area around the low frequency that will be affected by the gain settings.	*4
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).	
Mid Gain (Middle Gain)	-12– +12 dB	Sets the boost/cut amount in the middle frequency band.	
Mid Freq (Middle Frequency)	200–8000 Hz	Sets the center frequency in the middle frequency band.	
Mid Q (Middle Q)	0.3–10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.	
High Gain	-12– +12 dB	Sets the boost/cut amount in the High frequency band.	
High Freq (High Frequency)	1.4–20.0 kHz	Sets the center frequency in the High frequency band.	
High Q	0.3–10.0	Sets the width of the area around the High frequency that will be affected by the gain settings.	*4
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).	
Level (Output Level)	0–100	Sets the volume after passing through the equalizer.	

*1: An excessively great values for Resonance (Reso) may cause oscillation.

*2: An excessively large value for Cross-Feedback level may cause oscillation.

*3: When a mono source has been input, set "Inv" to provide spaciousness to the sound. Set "Sync" for inputting a stereo source.

*4: If Low Type (Lo Type) or High Type (Hi Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

Analog Flanger

Models Roland SBF-325 Analog Flanger. Provides three types of flanger effects as well as chorus-like effect.

Types of Flanger Effect

Analog Flanger provides a variety of flanger effects or chorus effects. Selecting the desired flanger effect type in Mode.

- FL1: General monaural flanger
- FL2: Stereo flanger that allows stereo location of the direct sound to take effect.
- FL3: Cross mix flanger that provides more powerful effect
- CHO: Chorus effect

Parameter (full name)	Setting	Function
AFL (Analog Flanger):		
Models SBF-325 Analog Flanger.		
Sw (Switch)	On, Off	Turns the analog flanger on or off.
Feedback (Feedback Level)	0–100	Sets the amount of the delayed sound should be returned to the flanger input. ^{*1, *2}
Modulation Freq (Modulation Frequency)	0–100	Sets the center frequency subject to application of the flanger effect.
Modulation Rate (Modulation Rate)	0–100	Sets the flanger's modulation rate.
Modulation Depth (Modulation Depth)	0–100	Sets the depth of the flanger modulation.
Mode (Mode)	FL1, FL2, FL3, CHO	Sets the type of flanger effects. ^{*3}
ChB (Channel B Inverse)	Nor, Inv	"Inv" indicates that the Flanger effect on Channel B should be inverted. "Nor" indicates that it should not be inverted.
Phase ChA (Mix A Inverse)	Nor, Inv	"Inv" indicates that the phase should be inverted for mixing Channel A Flanger sound into the direct sound. "Nor" indicates that the phase should not be inverted.
Phase ChB (Mix B Inverse)	Nor, Inv	"Inv" indicates that the phase should be inverted for mixing Channel B Flanger sound into the direct sound. "Nor" indicates that the phase should not be inverted.

^{*1:} This feature is disabled when Mode is set to "CHO."

^{*2:} Excessively large values may cause oscillation.

^{*3:} MODE is set to "FL1," audio of Input R will not be send to Effect.

Rotary

Models a rotary speaker. Behaviors of High and low frequency band Roters can be set up separately, allowing realistic modeling of unique surging sensation. This effect is suited for organ sounds.

Parameter (full name)	Setting	Function
NS (Noise Suppressor):		
Mutes noise in the silent mode.		
Sw (Switch)	On, Off	Turns the noise suppressor on or off.
Thresh (Threshold)	0–100	Sets the level to start muting noise.
Release (Release)	0–100	Sets the time over which the volume will drop to 0 after the noise starts being muted.
Ovd (Overdrive):		
Adds distortion to the sound.		
Sw (Switch)	On, Off	Turns overdrive on or off.
Gain (Gain)	0–100	Sets the degree of sound distortion.
Level (Level)	0–100	Sets the volume of the overdrive sound.
Rot (Rotary Speaker):		
Models a rotary speaker.		
LRate (Low Rate)	0.1–10.0 Hz	Sets the rotary frequency of the low frequency band roter.
HRate (High Rate)	0.1–10.0 Hz	Sets the rotary frequency of the High frequency band roter.

2ch RSS

Gives each of the sounds input into the respective channels three-dimensional locations.

- Input A is input into the L-channel side of the effect. Therefore, it is required to insert and connect "Lch" of the effect to the channel handling Input A. Similarly, Input B is input into the R-channel side of the effect. Insert and connect "Rch" of the effect to the channel handling Input B.
- Do not output the direct sound.

What is RSS?

It stands for Roland Sound Space. This is one of the Roland's proprietary effect technologies that enables three-dimensional location of the sound source on the ordinary stereo system. Not only control on effect for the front and the sides of the audience, this technology provides controls on directions (azimuth) such as up, down and rear as well as control on distance to localize the sound source.

Parameter (full name)	Setting	Function
RSS:	Gives sounds three-dimensional locations.	
Azimuth	-180–180°	Sets output directions, front, back, right and left, for the Input A channel.
Elevation	-90–90°	Sets output directions, up and down, for the Input A channel.
Type	A	Same effects can be achieved as the old VS series (VS-880/880EX/890/1680/1880/1824/1824CD/VSR-880).
	B	More distinctive effects can be achieved than Type A.
Phones	Off, On	Set to On when you use headphones. Set to Off when you use speakers.

Precautions for using RSS

When you use RSS with Phones Off, please notice the following points.

- Acoustically “dead” rooms are most suitable.
- A single-way speaker is suited. However, a multi-way type will do if it incorporates the coaxial or virtual coaxial system.
- Place the speakers as far as possible from the walls on the sides.
- Do not separate the right and left speakers too much.
- Recommended sweet spots for listening are as follows:

Labeling on RSS product package

In order to allow RSS to demonstrate its maximum performance, it is important to specify listening environment. For sale, we recommend that you should attach the following labeling on the packages of your products produced by using RSS patches.

■ When using with Phones Off

For Stereo Speakers

This sound is made to be played specifically through speakers.
The proper effect cannot be obtained if listened to through headphones.

■ When using with Phones On

For Headphones

This sound has been made specifically for playing through headphones.
You cannot obtain the proper effect if listening through speakers.

Mic Modeling (Microphone Modeling)

This modifies sound that was recorded by a conventional dynamic mic, lapel mic or direct line, causing it to sound as though it had been recorded by an expensive condenser mic or a special studio mic. The mic simulator can add effects of proximity or distance.

Selecting the microphone used for recording.

Input of Mic Converter selects the type of microphone to be used recording.

- DR-20: Roland DR-20 (dynamic microphone manufactured by Roland)
- Sml.Dy: Small Dynamic Microphone (dynamic microphone used for instruments and vocal)
- Hed.Dy: Head-worn Dynamic Microphone (headset-type dynamic microphone)
- Min.Cn: Miniature Condenser Microphone (very small condenser microphone)
- Flat: Line input
- C3000B: AKG C3000B (Condenser microphone manufactured by AKG)

Microphone types that can be modeled

The characteristics of the low-end general-purpose microphone are converted into the characteristics of the High-end microphone for studio application. You can add sound quality changes to already recorded sounds just as if a different type of microphone were used or if they were recorded at a different distance. In addition, it is possible to add microphone characteristics to line-recorded instrumental sounds. These characteristics can be set up by selecting the relevant value for Out of Mic Converter.

- Sml.Dy: Dynamic microphone for general musical instruments and vocal sounds. Ideal for a guitar amplifier and snare drums.
- Voc.Dy: Dynamic microphone for standard vocal sounds. Characterized in middle frequency band sounds with tension. Suited for vocal.
- Lrg.Dy: Dynamic microphone with an extended low frequency band. For bass and tom drums.
- Sml.Cn: Small condenser microphone for musical instruments. Characterized in bright High frequency band sounds. For metal percussion and acoustic guitars.
- Lrg.Cn: Condenser microphone with flat characteristics. For vocal, narration and live musical instruments.
- Vnt.Cn: Vintage condenser microphone. For vocal and live musical instruments.
- Flat: Microphone with flat frequency response. For removing peculiarity of the microphone used for recording sounds.

- * When a condenser-type mic is selected in OUT, low-range noise transmitted through the mic stand may be accentuated due to the mic's low range characteristics. In such instances, either cut out any unnecessary low end with bass cut filter, or equip the mic stand with an isolation mount (a mic holder with rubber or other shock absorbing material).
- * The "Lrg.Dy" and the "Lrg.Cn" of the Out parameter are valid only if the In parameter is set to "Min.Cn."

Proximity effect of microphone

In nature, a microphone tends to extend the low frequency band characteristics when placed close to the sound source. This is called proximity effect. This effect can be modeled in Proximity Effect (Prox-Efect). Set the parameter to a positive (+) value for a shorter distance to the sound source and a negative (-) value for a longer distance to the sound source. Time of Distance models the time difference due to distance from the sound source.

Controlling Channels A and B separately

Setting Link On enables simultaneous control on the 4-Band Parametric Equalizer via Channel B according to the settings on the Channel A side. To control Channels A and B separately, turn Link Off.

Parameter (full name)	Setting	Function
Lnk (Link):	Channel B follows the settings for Channel A.	
Link (Link Switch)	On, Off	Specifies if Channel B follows or does not follow the settings for Channel A.
CnvA, CnvB (Mic Converter):	Converts the characteristics of the low-end general-purpose microphone into the characteristics of the High-end microphone for studio application.	
Sw (Switch)	On, Off	Turns the microphone converter on or off.
Input (Input)	See the column on this page.	Sets the microphone type used for recording.
Output (Output)	See the column on this page.	Sets the microphone types to be Modeled.
Phase (Phase)	Nor, Inv	Sets the microphone phase.
BCutA, BCutB (Bass Cut Filter):	Cuts off undesired low frequency band sounds such as pop noise.	
Sw (Switch)	On, Off	Turns the bass cut filter on or off.
Freq (Frequency)	Thru, 20 - 2000 Hz	Sets the frequency for cutting off undesired low frequency band sounds such as pop noise.
DstnA, DstnB (Distance):	Models the frequency characteristics and time difference due to distance difference.	
Sw (Switch)	On, Off	Turns the distance on or off.
Prox.Fx (Proximity Effect)	-12 - +12	Corrects the low frequency band characteristics due to the distance from the sound source.
Time (Time)	0-3000 cm	Models the time difference due to the distance from the sound source.
LmtA, LmtB (Limiter):	Prevents distortion by suppressing signals at High levels.	
Sw (Switch)	On, Off	Turns the limiter on or off.
Thrsh (Threshold)	-60-0 dB	Sets the volume level to start suppressing excessive input.
Attack (Attack Time)	0-100	Sets the time from when the input level exceeds the threshold level to when the effect begins to apply.
Release (Release Time)	0-100	Sets the time from when the input level drops below the threshold level to when the effect ceases to apply.
Detect HPF Freq (Detect HPF Frequency)	Thru, 20 - 2000 Hz	Normally, sets "Thru." Sets the cutoff frequency of the level detection section.
Level (Output Level)	-60 - +24 dB	Sets the volume of the compressor sound.

Guitar Multi 1-3

These provide multi-effects for guitar sounds suited for rock. Guitar Multi 1 through 3 differ in the degree of sound distortion. Guitar Multi 1 provides the Highest degree of distortion and Guitar-Multi 3 the lowest.

Usage of Guitar Multi 1 through 3

The basic configuration is almost identical for all of Guitar-Multi 1 through 3. The only difference is the type of the second effect (heavy metal, distortion, and overdrive). Select Guitar Multi 1 to add severe distortion to the sound, and select Guitar Multi 3 for soft distortion as that achieved with the vacuum tube amplifier.

Adding Wah effect by changing input volume

Typically, Auto-Wah provides an automatic wah effect at the cycle set with Rate (Rate).

Alternatively, you can give wah effect according to changes of input volume. For example, you can apply the wah effect so that it reflects changes in picking on the guitar. First, adjust sensitivity for changes in input volume by using Sense (Sens). Set it to a larger value for finer subtlety. After that, you simply decide the direction into which the filter should be moved by entering a setting for Polarity (Pol).

Selecting Guitar Amplifier

You can select which type of Guitar Amplifier to use with Mode (Mode) under Guitar Amplifier Simulator.

- Small: Small-sized amplifier
- Built In: Built-in type amplifier
- 2 Stack: Large-sized two-deck stacked amplifiers
- 3 Stack: Large-sized three-deck stacked amplifiers

Compressors used in Guitar Multi 1 through 3

Compressors used in Guitar Multi 1 through 3 are designed to accommodate playing of the guitar, providing a slightly different effect from ordinary compressors. Compressors for the guitar unifies volumes by suppressing signals at High levels and enhancing signals at low levels.

Unlike these, ordinary compressors simply suppress signals at High levels.

Parameter (full name)	Setting	Function
Comp (Compressor): Compresses the entire output signals when the input volume exceeds a specified value.		
Sw (Switch)	On, Off	Turns the compressor on or off.
Sustain (Sustain)	0–100	Sets the time over which low level signals are boosted to a constant volume.
Attack (Attack)	0–100	Sets the strength of attack when a sound is input.
Tone (Tone)	-50–50	Sets the tone color.
Level (Level)	0–100	Sets the volume of the compressor sound.
Metal (Heavy Metal) / Dstr (Distortion) / Ovd (Overdrive): Gives distortion to the sound.		
Sw (Switch)	On, Off	Turns the metal, distortion or overdrive on or off.
Gain (Gain)	0–100	Sets the degree of the distortion.
Low Gainain (Low Gain)	-100–100	Sets the boost/cut amount in the low frequency band. (only for Metal)
MidGain (Middle Gain)	-100–100	Sets the boost/cut amount in the middle frequency band.(only for Metal)
High Gainain (High Gain)	-100–100	Sets the boost/cut amount in the High frequency band. (only for Metal)
Tone (Tone)	0–100	Sets the tone color. (for Distortion/Overdrive only)
Level (Level)	0–100	Sets the volume of the metal, distortion or overdrive sound.
NS (Noise Suppressor): Mutes noise in the silent mode.		
Sw (Switch)	On, Off	Turns the noise suppressor on or off.
Thresh (Threshold)	0–100	Sets the level to start muting noise.
Release (Release)	0–100	Sets the time over which the volume will drop to 0 after the noise starts being muted.
Wah (Auto Wah): Adds the wah effect.		
Sw (Switch)	On, Off	Turns the auto wah on or off.
Mode (Mode)	LPF, BPF	Set to “BPF” for the wah effect in a narrow range of frequencies and to “LPF” for wah effect in a broad range of frequencies.
Pol (Polarity)	Up, Down	Activated only for adding the wah effect according to input volume changes. Set to “Up” for moving the filter to a Higher frequency and “Down” for moving it to a lower frequency.
Sens (Sense)	0–100	Normally “0.” Sets sensitivity for input volume changes for adding the wah effect according to input volume changes.
Freq (Frequency)	0–100	Sets the frequency at which the wah effect starts working.
Peak (Peak)	0–100	Sets the degree of the wah effect applied at around the frequency.
Rate (Rate)	0.1–10.0 Hz	Sets the rate at which the wah effect will be cyclically modulated.
Depth (Depth)	0–100	Sets the depth at which the wah effect will be cyclically modulated.
Level (Level)	0–100	Sets the volume of the wah sound.
Mdl (Guitar Amplifier Simulator): Models Guitar Amplifier.		
Sw (Switch)	On, Off	Turns the guitar amplifier simulator on or off.
Mode (Mode)	See the column on the previous page.	Type of the guitar amplifier.
Flg (Flanger): Adds effects similar to ascending/descending sound of a jet.		
Sw (Switch)	On, Off	Turns the flanger on or off.
Rate (Rate)	0.1–10.0 Hz	Sets the rate of modulation for the flanger.
Depth (Depth)	0–100	Sets the depth of modulation for the flanger.
Manual (Manual)	0–100	Sets the center frequency subject to application of the flanger effect.
Reso (Resonance)	0–100	Enhances frequency components at around the center frequency set with Manual.
Dly (Delay): Adds a delayed sound to the direct sound, adding depth to the sound or creating special effects.		
Sw (Switch)	On, Off	Turns the delay on or off.
Time (Delay Time)	0–1000 ms	Sets the time from direct sound until when the delay sound is heard. *1
shift (shift)	L1000–0–R1000 ms	Sets the delay time difference between the right and left delay sounds.
FBTim (Feedback Delay Time)	0–1000 ms	Sets the feedback repetition cycle.
FBLevl (Feedback Level)	-100–100	Sets the amount of the delay sound should be returned to the delay input.
FX Lvl (Effect Level)	-100–100	Sets the volume of the delay sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.

*1: The sum of the Delay Time value and the Delay shift value should not exceed the setting range of Delay Time. For example, if Delay Time is set to 800 ms, the setting range of Delay shift is L200 to R200 ms.

Guitar Amp Modeling (Guitar Amplifier Modeling)

Models a guitar amplifier.

Parameter (full name)	Setting	Function
NS (Noise Suppressor): Mutes noise in the silent mode.		
Sw (Switch)	On, Off	Turns the noise suppressor on or off.
Thresh (Threshold)	0–100	Sets the level to start muting noise.
Release (Release)	0–100	Sets the time over which the volume will drop to 0 after the noise starts being muted.
AMP (Pre-Amplifier): Models the pre-amplifier section of a guitar amplifier.		
Sw (Switch)	On, Off	Turns the compressor on or off.
Amp Type (Pre-amplifier type)	See the column on the next page.	Sets the type of the guitar amplifier.
Gain (Gain)	Low, Middle, High	Sets the degree of sound distortion on the pre-amplifier.
Bright (Bright)	On, Off	You can set this on to generate clear-cut bright sounds. ^{*1}
Volume (Volume)	0–100	Sets the volume and degree of distortion of the amplifier.
Bass (Bass)	0–100	Sets the tone of the low range.
Middle (Middle)	0–100	Sets the tone of the middle range. ^{*2}
Treble (Treble)	0–100	Sets the tone of the High range.
Presence (Presence)	0–100 (-100–0)	Sets the tone of the ultra-High range. ^{*3}
Master (Master)	0–100	Sets the volume of the entire pre-amplifier
Sp (Speaker Simulator): Models a speaker.		
Sw (Switch)	On, Off	Turns the speaker simulator on or off.
Sp Type (Speaker Type)	See the column on the previous page.	Sets the speaker type.
Mic Setting (Microphone Setting)	1, 2, 3	Sets the location of the microphone that is recording the sound of the speaker. This can be adjusted in three steps, with the microphone becoming more distant in the order of 1, 2, and 3.
MicLvl (Microphone Level)	0–100	Sets the microphone volume.
DirLvl (Direct Level)	0–100	Sets the volume of the direct sound.

^{*1:} Can be set only when JC-120, Clean Twin or BG Lead is selected for Pre-amplifier Type.

^{*2:} Cannot be set when Match Drive is selected for the Pre-amplifier Type.

^{*3:} The setting range is -100 to 0 when Match Drive is selected for the Pre-amplifier Type.

Pre-amplifier

Models the pre-amplifier section of a guitar amplifier. 14 types of pre-amplifiers that can be modeled are listed below: The type can be set with pre-amplifier Type.

JC-120:	The sound of a Roland.
Clean Twin:	The sound of standard built-in type vacuum tube amplifier.
Match Drive:	The sound of a recent vacuum tube amplifier widely used in blues, rock and fusion.
BG Lead:	The sound of a vacuum tube amplifier representative of the late 70's through 80's.
MS1959<I>:	The sound of the large vacuum tube amplifier stack that was indispensable to the British hard rock of the 70's, with input I connected.
MS1959<II>:	The same amplifier as MS1959 <I>, but with input II connected.
MS1959<I+II>:	The same amplifier as MS1959 <I>, but with input I and II connected in parallel.
SLDN Lead:	The sound of a vacuum tube amplifier usable in a wide variety of styles.
Metal 5150:	The sound of a large vacuum tube amplifier suitable for heavy metal.
Metal Lead:	A metal lead sound with a distinctive mid-range.
OD-1:	The sound of the BOSS OD-1 compact effector.
OD-2Turbo:	The sound of the BOSS OD-2 compact effector with the Turbo switch on.
Distortion:	Distortion sound
Fuzz:	Fuzz sound

* With JC-120, Clean Twin or BG Lead is selected, turning Bright (Bright) on generates clear-cut bright sound.

Speaker simulator

Models a speaker. The 12 types of speakers as listed below can be modeled: The type is set with Speaker Type. The type can be set with Speaker Type.

Type	Cabinet (size (in inch), number of units)	Speaker	Microphone
Small	Small open-back enclosure	10	Dynamic microphone
Middle	Open back enclosure	12 x 1	Dynamic microphone
JC-120	Open back enclosure	12 x 2	Dynamic microphone
Built In 1	Open back enclosure	12 x 2	Dynamic microphone
Built In 2	Open back enclosure	12 x 2	Condenser microphone
Built In 3	Open back enclosure	12 x 2	Condenser microphone
Built In 4	Open back enclosure	12 x 2	Condenser microphone
BG Stack 1	Sealed enclosure	12 x 2	Condenser microphone
BG Stack 2	Large sealed enclosure	12 x 2	Condenser microphone
MS Stack 1	Large sealed enclosure	12 x 4	Condenser microphone
MS Stack 2	Large sealed enclosure	12 x 4	Condenser microphone
Metal Stack	Large double stack	12 x 4	Condenser microphone

Recommended combinations of Pre-amplifier and Speaker

Pre-amplifier Type	Speaker Type
BG Lead	BG Stack 1, BG Stack 2, Middle
MS1959II	BG Stack 1, BG Stack 2, Metal Stack
MS1959I+II	BG Stack 1, BG Stack 2, Metal Stack
SLDN Lead	BG Stack 1, BG Stack 2, Metal Stack
Metal 5150	BG Stack 1, BG Stack 2, Metal Stack
Metal Lead	BG Stack 1, BG Stack 2, Metal Stack
OD-2 Turbo	Built In1 - 4
Distortion	Built In1 - 4
Fuzz	Built In 1 - 4

Vocal Multi

This feature provides a multi-effect suited for vocals.

Cutting distortion in vocals

Limiter can be used to suppress signals at a High level to prevent sound distortion. To do this, follow the steps below:

Mode (Mode):	Limiter
Limiter Threshold (Thresh):	Sets the volume at which sound distortion starts being suppressed.
Limiter Release (Release):	Determines the time that elapses before the input level becomes off after it drops below the Limiter Threshold.
Limiter Level (Level):	Decides the volume after passing through Limiter.

Cutting the sibilant sounds of a voice.

De-esser can be used to cut off sibilant sounds contained in vocal sounds to achieve softer sound quality. To do this, follow the steps below:

Mode (Mode):	De-esser
De-esser Sense (Sens):	Sets the degree of the De-esser effect.
De-esser Frequency (Freq):	Sets the frequency at which De-esser effect starts working.

Parameter (full name)	Setting	Function
NS (Noise Suppressor):	Mutes noise in the silent mode.	
Sw (Switch)	On, Off	Turns the noise suppressor on or off.
Thresh (Threshold)	0-100	Sets the level to start muting noise.
Release (Release)	0-100	Sets the time over which the volume will drop to 0 after the noise starts being muted.
Lmt (Limiter / De-esser):	Suppresses signals at High levels to control distortion / Suppresses the annoying s-consonant.	
Sw (Switch)	On, Off	Turns the limiter / de-esser on or off.
Mode (Mode)	Limiter, De-esser	Selects limiter or de-esser.
Thresh (Limiter Threshold)	0-100	Sets the volume at which sound distortion starts being suppressed.
Release (Limiter Release)	0-100	Sets the time until when the limiter will turn off after the input level falls the limiter Threshold (Thresh).
Level (Limiter Level)	0-100	Sets the volume of the limiter sound.
ENH (Enhancer):	Accentuates the sound and push the sound forward.	
Sw (Switch)	On, Off	Turns the enhancer on or off.
Sens (Sense)	0-100	Sets the degree of the enhancer effect desired.
Freq (Frequency)	1.0-10.0 kHz	Sets the frequency at which the enhancer effect starts working.
MixLvl (Mix Level)	0-100	Sets the amount of the enhancer sound should be mixed into the direct sound.
Level (Level)	0-100	Sets the volume of the enhancer sound.
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain (Low Gain)	-12- +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3-10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. *1
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
Mid Gain (Middle Gain)	-12- +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200-8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3-10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12- +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4-20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3-10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. *1
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Output Level)	0-100	Sets the volume after passing through the equalizer.
Pshift (Pitch shifter):	shifts the pitch.	
Sw (Switch)	On, Off	Turns the pitch shifter on or off.
Chromatic Pitch	-12-12	Pitch variation (by semitone)
Fine Pitch	-100-100	Pitch variation (by cent)
FX Lvl (Effect Level)	-100-100	Sets the volume of the pitch shift sound.
DirLvl (Direct Level)	-100-100	Sets the volume of the direct sound.

Dly(Delay):Adds a delayed sound to the direct sound, adding depth to the sound or creating special effects.

Sw (Switch)	On, Off	Turns the delay on or off.
Time (Delay Time)	0–1000 ms	Sets the time from direct sound until when the delay sound is heard.
FBLvl (Feedback Level)	-100–100	Sets the amount of the delay sound should be returned to the delay input.
FX Lvl (Effect Level)	-100–100	Sets the volume of the delay sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.

Cho (Chorus): Adds spaciousness and thickness to the sound.

Sw (Switch)	On, Off	Turns the chorus on or off.
Rate (Rate)	0.1–10.0 Hz	Sets the rate of modulation.
Depth (Depth)	0–100	Sets the depth of modulation.
PreDLY (Pre-Delay)	0–50 ms	Sets the time delay from when the direct sound begins until the processed sound is heard.
FX Lvl (Effect Level)	-100–100	Sets the volume of the chorus sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.

*1: If Low Type (Lo Type) or High Type (Hi Type) is set to “Shlv (Shlving Type),” the setting for Lo Q or High Q is invalid.

Voice Transformer

You can convert male voice into female voice, female voice into male voice, and human voice into mechanical voice to create sounds of various qualities by controlling the base pitch and the formant separately.

- When inputting voice, use voice of one person only. Inputting voices of more than one person disables normal operation.
- Be sure that sound from a speaker does not enter the microphone you are using. This will have the same effect as if several voices were input to the unit.
- A unidirectional microphone is recommended for use. It is also recommended that the person should speak standing as close to the microphone as possible.
- “Voice Transformer” cannot be used on EFFECT2, 4, and 6 (even-numbered effects).
- When “Voice Transformer” is used on EFFECT1, 3, and 5 (odd-numbered effects), EFFECT2, 4, and 6 (even-numbered effects) cannot be used.

Parameter (full name)	Setting	Function
VT (Voice Transformer): Creates various voice characters.		
Sw (Switch)	On, Off	Turns Vocal the transformer on or off.
Robot (Robot)	On, Off	When this is on, the audio will be output at a fixed pitch regardless of the pitch that is input.
Chromatic Pitch	-12– +36	Sets the pitch variation of the voice to be output (by semitone).
Fine Pitch	-100–100	Sets the pitch variation of the voice to be output (by cent).
Chromatic Formant	-12– +12	Sets the formant variation of the voice to be output (by semitone).
Fine Formant	-100– +100	Sets the formant variation of the voice to be output (by cent).
MixBal (Mix Balance)	0–100	Sets the volume balance between the output voice and the input voice.
REV (Reverb): Adds reverberation.		
Sw (Switch)	On, Off	Turns the reverb on or off.
Time (Reverb Time)	0.1–32.0 sec	Sets the length (time) of the reverb sound.
PreDLY (Pre-Delay)	0–200 ms	Sets the time until the reverberation appears.
Densy (Density)	0–100	Sets the density of the reverb sound.
FX Lvl (Effect Level).	0–100	Sets the volume of the reverb sound.

Formants (p.12)

Vocal Canceled

When a stereo source is being input from CD or DAT and so on, this cancels the sound which is located in the stereo center, such as the vocal or bass.

Depending on the music source, sounds that you do not wish to be canceled may be canceled as well. In particular if the musical source has heavy reverb or if the sound that you wish to delete is not located in the center, the vocal canceler may not produce the desired result.

Canceling the vocals alone

Vocal Canceled cancels the sound located in the center. That means it cancels sounds such as the bass and sounds of the lead instrument along with vocal sounds. To cancel vocals only to create music for karaoke, for example, set Range Lo to around 100 Hz and Range Hi to around 1 kHz.

Parameter (full name)	Setting	Function
VC (Vocal Canceled):		
Cancels sounds located in the center such as vocals and the bass.		
Sw (Switch)	On, Off	Turns the vocal canceler on or off.
Balance (Balance)	0-100	If the sound that you wish to cancel is not located in the center, find the point at which it is most effectively cancelled.
RangeLo (Range Low)	Unlimit, 20 - 2000 Hz	Sets the lower limit of the frequency band to be canceled. ^{*1}
RangeHi (Range High)	1.0 - 20.0 kHz, Unlimit	Sets the upper limit of the frequency band to be canceled. ^{*2}
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain (Low Gain)	-12- +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3-10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. ^{*3}
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
Mid Gain (Middle Gain)	-12- +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200-8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3-10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12- +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4-20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3-10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. ^{*3}
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Output Level)	0-100	Sets the volume after passing through the equalizer.

^{*1:} Setting to "Unlimit" means that the frequency that can be played back on this unit is the lower limit.

^{*2:} Setting to "Unlimit" means that the frequency that can be played back on this unit is the upper limit.

^{*3:} If Low Type (Lo Type) or High Type (Hi Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

Vocoder

The vocoder creates “talking instrument” effects. To use Vocoder, input an instrumental sound into the left channel and a vocal sound into the right channel. The instrumental sound is split into ten frequency bands to be processed according to its frequency components.

Instrumental sounds are input into the L-channel side of the effect. Therefore, it is required to insert and connect “Lch” of the effect to the channel handling instrumental sounds. Similarly, vocal sounds are input into the R-channel side of the effect. Insert and connect “Rch” of the effect to the channel handling vocal sounds.

Tips for using Vocoder

It is a good idea to choose instrumental sounds containing a lot of overtones. Recommended sounds include those with saw-tooth waveforms such as strings and distorted guitar sounds.

Parameter (full name)	Setting	Function
Voc (Vocoder): The pitch is specified with the instrumental sound while the tone is output in vocals.		
Char 1–10 (Voice Characters)	0–100	Sets the volume by frequency band. These are used to change the vocoder tone.
CHO (Chorus): Adds spaciousness and depth to the sound.		
Sw (Switch)	On, Off	Turns the chorus on or off.
Rate (Rate)	0.1–10.0 Hz	Sets the rate of modulation.
Depth (Depth)	0–100	Sets the depth of modulation.
PreDLY (Pre-Delay)	0–50 ms	Sets the time delay from when the direct sound begins until the processed sound is heard.
FBLvl (Feedback Level)	-100–100	Sets the amount of the chorus sound should be returned to the chorus input.
FX Lvl (Effect Level)	-100–100	Sets the volume of the chorus sound.
DirLvl (Direct Level)	-100–100	Sets the volume of the direct sound.

Vocoder2 (19)

This is a 19-band vocoder. Provides clear sounds that used to be impossible with the previous vocoders.

- Instrumental sounds are input into the L channel side of Effect. Therefore, it is required to insert-connect "Lch" of Effect to the channel handling instrumental sounds. Similarly, vocal sounds are input into the R channel side of Effect. Insert-connect "Rch" of Effect to the channel handling vocal sounds.
- "Vocoder2 (19)" cannot be used on EFFECT2, 4, and 6 (even-numbered effects).
- When "Vocoder2 (19)" is used on EFFECT1, 3, and 5 (odd-numbered effects), EFFECT2, 4, and 6 (even-numbered effects) cannot be used.

Difference between Vocoder and Vocoder 2

Compared to Vocoder, Vocoder 2 has a significant number of frequency bands as points. It also makes it possible to make fine adjustment including adjustment of the input sensitivity of the microphone and location of sounds as well as setting the input level for instrumental sounds and removing noise. All this yields clear human voices.

"Envelope" for defining sound characteristics

Each sound has its own envelope. An envelope gives characteristics to the sound and functions as a significant factor for the human ear to distinguish different sound types. On Vocoder 2, you can use Envelope to give the following characteristics.

- Sharp: Enhances human voice.
- Soft: Enhances instrumental sound.
- Long: Vintage sound with long reverberation.

Sound location

Pan Mode (PanMode) can be used to specify how Vocoder sounds should be located.

- Mono: Locating in the middle.
- Stereo: Stereo (Odd-number frequencies are located to the left and even-number frequencies to the right.)
- L→R: Lower frequencies are located to the left and upper frequencies to the right.
- R→L: Lower frequencies are located to the right and upper frequencies to the left.

Sounding instrumental sounds with the formant fixed

While inputting voice through the microphone, instrumental sounds can be sounded at the same vocal formant. For example, when saying "a-i-u-e-o" into the microphone, set "Hold" On at the moment the speaker is on the "i" sound to issue an instrumental sound with the formant of the "i" sound.

Parameter (full name)	Setting	Function
Voc (Vocoder 2):		
The pitch is specified as in the instrumental sound while the tone is output in the human voice.		
Envelope (Envelope)	Sharp, Soft, Long	Defines characteristics of the sound.
PanMode (Pan Mode)	Mono, Stereo, L→R, R→L	Defines how the sound is located.
Hold (Hold)	On, MIDI	Specifies that an instrumental sound is or is not issued with the formant fixed.
MicSens (Microphone Sensitivity)	0-100	Sets the input sensitivity of the microphone.
SynInLv1 (Synthesizer In Level)	0-100	Sets the input level of the instrumental sound.
Character Ch1 - 19 (Voice Character Channels 1 - 19)	0-100	Sets the tone of the vocoder.
Mic (Microphone Mix)	0-100	Sets the amount of the sound after passing through the microphone HPF should be mixed into the Vocoder output.
MicHPF (Microphone HPF)	Thru, 1.0-20.0 kHz	Sets the frequency at which HPF on the vocal sounds through the microphone starts taking effect. Sets this to "Thru" if HPF is not desired.
MicPan (Microphone Pan)	L63-R63	Sets the panning of vocal sounds through the microphone.
NSThresh (Noise Suppressor Threshold)	0-100	Sets the volume to start muting noise on the instrumental sound input.
Cho (Chorus):		
Adds spaciousness and depth to the sound.		
Sw (Switch)	On, Off	Turns the chorus on or off.
Rate (Rate)	0.1-10.0 Hz	Sets the rate of modulation.
Depth (Depth)	0-100	Sets the depth of modulation.
PreDly (Pre-Delay)	0-50 ms	Sets the time delay from when the direct sound begins until the chorus sound is heard.
MixBal (Mix Balance)	0-100	Sets the volume balance between the chorus sound and the direct sound.

Lo-Fi Processor

This allows you to create a “lo-fi” sound by lowering the sample rate and/or decreasing the number of bits.

Creating lo-fi sounds

Follow the steps below to create lo-fi sounds essential to dance music including hip-hop and DJ music.

● Lo-fi Processor

- Turn Pre Filter and Post Filter off. This provides powerful lo-fi sounds containing digital distortion.
- Set Rate and Bit to relatively low values. Note, however, an excessively low value for Bit may cause big noise even in the silent mode. In that case, increase Threshold (Thresh) of Noise Suppressor.

● Real time Modify Filter

- Increase resonance to add a twist to the sound. Note that excessive resonance may cause oscillation.

Lo-Fi (Lo-Fi Processor):

Creates lo-fi sounds.		
Sw (Switch)	On, Off	Turns the lo-fi processor on or off.
Pre Filter (Pre Filter Switch)	On, Off	Turns the filter to reduce digital distortion on or off.
Rate (Rate)	Off, 1/2 - 1/32	Sets the sample rate. Set Rate to “Off” if no change is desired.
Bit (Bit)	Off, 15 bits - 1 bit	Sets the number of bits in data. Set Bit to “Off” if no change is desired.
Post Filter (Post Filter Switch)	On, Off	Turns the filter to reduce digital distortion due to modification to lo-fi sounds on or off.
FX Lvl (Effect Level).	0-100	Sets the volume of the lo-fi sound.
DirLvl (Direct Level)	0-100	Sets the volume of the direct sound.

RMF (Real time Modify Filter):

Creates sounds with a twist.

Sw (Switch)	On, Off	Turns the real time modify filter on or off.
Type (Type)	LPF, BPF, HPF	Sets the filter type.
CutOff (Cutoff Frequency)	0-100	Sets the cutoff frequency.
Reso (Resonance)	0-100	Enhances the frequency components around cutoff frequency.
Gain (Gain)	0-24 dB	Sets the volume of the real time modify filter.

NS (Noise Suppressor):

Mutes noise in the silent mode.

Thresh (Threshold)	0-100	Sets the level to start muting noise.
Release (Release)	0-100	Sets the time over which the volume will drop to 0 after the noise starts being muted.

3band Isolator

Sharply cuts off components by frequency band to eliminate undesired sounds. Useful to eliminate undesired sounds and take out only specific sounds from a CD. Isolator can make sounds completely perish, unlike ordinary equalizers that leave some sounds even with the gains of the respective frequency bands set to the minimum.

Muting the bass

Set up as follows to eliminate low frequency band sounds such as bass sounds.

Anti-phase Low Mix Switch (AntiPhase LoMixSw):On

Anti-phase Low Level (AntiPhase LoLev):Relatively High

Muting vocals

Set up as follows to eliminate middle frequency band sounds such as vocal sounds.

Anti-phase Middle Mix Switch (AntiPhase MidMixSw):On

Anti-phase Middle Level (AntiPhase MidLev):Relatively High

Muting noise

Identify the frequency band of the noise and set the relevant Level (LowLvl, MidLvl or HiLvl) to -60 dB.

Parameter (full name)	Setting	Function
Iso (3-band Isolator):	Divides the input sound into three frequency bands to abstract or eliminate the sound.	
Sw (Switch)	On, Off	Turns the 3-band isolator on or off.
AntiPhase LoLev (Anti-phase Low Level)	0-100	Sets the amount of the low frequency band sound should be muted.
AntiPhase MidLev (Anti-phase Middle Level)	0-100	Sets how much of the middle frequency band sound should be muted.
LoMixSw (Anti-phase Low Mix Switch)	On, Off	Mutes or leaves the low frequency band sound.
MidMixSw (Anti-phase Middle Mix Switch)	On, Off	Mutes or leaves the middle frequency band sound.
LowLvl (Low Level)	-60- +4 dB	Increases or decreases frequency bands in the low frequency band.
MidLvl (Middle Level)	-60- +4 dB	Increases or decreases frequency bands in the middle frequency band.
HiLvl (High Level)	-60- +4 dB	Increases or decreases frequency bands in the High frequency band.

Dual Compressor/Limiter

Compressors suppress signals at High levels. Limiter is used to control excessive input. Each of the above is used to prevent sound distortion or to control dynamics.

Input A is input into the L-channel side of the effect. Therefore, it is required to insert and connect "Lch" of the effect to the channel handling Input A. Similarly, Input B is input into the R-channel side of the effect. Insert and connect "Rch" of the effect to the channel handling Input B.

Difference between Compressor and Limiter

Behaviors of Compressor and Limiter are very similar. Both of them compress the entire output signals if input signals exceed a certain level (threshold level), according to the input level.

Compressor automatically drops the amplitude to suppress all levels in the exceeding section. Limiter suppresses only the maximum level of input signals.

● Using as Limiter

- Threshold Level (Thresh): Relatively High
- Ratio (Ratio): 100:1
- Attack Time (Attack): Relatively short
- Release Time (Release): Relatively short

● Using as Compressor

- Threshold Level (Thresh): A level that does not cause distortion of output sounds.
- Ratio (Ratio): 1.5:1, 2:1, 4:1
- Attack Time (Attack): Adjusted according to the input sound type.
- Release Time (Release): Adjusted according to the input sound type.

Parameter (full name)	Setting	Function
CmpA, CmpB (Compressor): (Limiter):	Compresses the entire output signals when the input volume has exceeded a preset value. Suppresses the volume of the section where the input volume has exceeded the preset value.	
Sw (Switch)	On, Off	Turns the compressor/limiter on or off.
Thrsh (Threshold Level)	-60 - 0 dB	Sets the level at which the compressor/limiter starts taking effect.
Ratio (Ratio)	1.5:1, 2:1, 4:1, 100:1	Sets the compression ratio applied when threshold level (Thresh) is exceeded.
Attack (Attack Time)	0-100	Sets the time from when the input level exceeds the threshold level to when the effect begins to apply.
Release (Release Time)	0-100	Sets the time from when the input level drops below the threshold level to when the effect ceases to apply.
Level (Output Level)	-60-12 dB	Sets the volume of the compressor/limiter sound.
Detect (Detect In)	A, B, Link	Selects Input A or B for controlling compressor/limiter. Set this to "Link" for controlling by the input at a greater level.
NS (Noise Suppressor):	Mutes noise in the silent mode.	
Sw (Switch)	On, Off	Turns the noise suppressor on or off.
Thresh (Threshold)	0-100	Sets the level to start muting noise.
Release (Release)	0-100	Sets the time over which the volume will drop to 0 after the noise starts being muted.
Detect (Detect In)	A, B, Link	Selects the input (Input A/Input B) for controlling Noise Suppressor. Set this to "Link" for controlling by the input at a greater level.

Parametric Equalizer (4-Band Parametric Equalizer)

This is an equalizer that can freely change the cutoff frequency or the band width (Q). With this equalizer, you can create sounds with subtlety.

Cutting noise.

4-Band Parametric Equalizer can freely change the cutoff frequency or the band width (Q) at four points, that is, in the High, High middle, low middle and low frequency bands.

Capitalizing on this feature, you can precisely capture the point where any noise or howling is occurring. To find such point, the first step is to increase the gain for easier identification of sound variation and move the cutoff frequency little by little. Then, perform filtering by sharpening "Q."

Controlling Channels A and B separately

Setting Link On enables simultaneous control on the 4-Band Parametric Equalizer via Channel B according to the settings on the Channel A side. To control Channels A and B separately, turn Link off.

Parameter (full name)	Setting	Function
Lnk (Link):		
Makes Channel B follow the settings for Channel A.		
Link (Link Switch)	On, Off	Specifies if Channel B follows or does not follow the settings for Channel A.
PEQA, PEQB (4 Band Parametric Equalizer): Parametric equalizer with four bands.		
Sw (Switch)	On, Off	Turns the parametric equalizer on or off.
Low Gain (Low Gain)	-12~ +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q (Low Q)	0.3~10	Sets the width of the area around the low frequency that will be affected by the gain settings.*1
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
LowMid Gain (Low Middle Gain)	-12~ +12 dB	Sets the boost/cut amount in the low middle frequency band.
LoMid Freq (Low Middle Frequency)	200~8000 Hz	Sets the center frequency in the low middle frequency band.
LoMid Q (Low Middle Q)	0.3~10	Sets the width of the area around the Low middle frequency that will be affected by the gain settings.
HiMid Gain (High Middle Gain)	-12~ +12 dB	Sets the boost/cut amount in the High middle frequency band.
HiMid Freq (High Middle Frequency)	200~8000 Hz	Sets the center frequency in the High middle frequency band.
HiMid Q (High Middle Q)	0.3~10	Sets the width of the area around the High middle frequency that will be affected by the gain settings.
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
High Gain (High Gain)	-12~ +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4~20.0 kHz	Sets the center frequency in the High frequency band.
High Q (High Q)	0.3~10	Sets the width of the area around the High frequency that will be affected by the gain settings.*1
InputG (Input Gain)	-60~ +12 dB	Sets the overall volume before passing through the equalizer.
Level (Output Level)	-60~ +12 dB	Sets the overall volume after passing through the equalizer.

*1: If Low Type (Low Type) or High Type (High Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

Graphic Equalizer (10-Band Graphic Equalizer)

This Equalizer sets the boost/cut amount by each segment of the frequency divided into ten bands. In performing PA at a live, this feature is useful to prevent howling by cutting the site-specific resonance frequency.

Preventing howling

While performing PA at a live, follow the steps below to prevent howling. First, identify the site-specific resonance frequency to cut its gain.

Controlling Channels A and B separately

Setting Link On enables simultaneous control on the 10-Band Parametric Equalizer via Channel B according to the settings on the Channel A side.

To control Channels A and B separately, turn Link Off.

Parameter (full name)	Setting	Function
Lnk (Link):	Makes Channel B follow the settings for Channel A.	
Link (Link Switch)	On, Off	Specifies if Channel B follows or does not follow the settings for Channel A.
GEQA, GEQB (10-Band Graphic Equalizer): Models a 10-band graphic equalizer.		
Sw (Switch)	On, Off	Turns the parametric equalizer on or off.
31.2 – 16 k (Gain)	-12– +12 dB	Sets the boost/cut amount at the respective frequencies.
InputG (Input Gain)	-60– +12 dB	Sets the overall volume before passing through the equalizer.
Level (Output Level)	-60– +12 dB	Sets the overall volume after passing through the equalizer.

Hum Canceler

Eliminates annoying hum (or “surge” sounding “boon”).

Removing hum

Hum is a noise with a certain low frequency. Hum is generated mostly due to ingression of part of alternating current into signals as alternating current is converted into direct current in the power circuit. Sets Frequency (Freq) to that according with the frequency of the power source (50 Hz/60 Hz), and hum with that frequency and frequencies of its multiples can be removed.

Range Lo and Range Hi can be used to specify the frequency band of hum to be removed.

Parameter (full name)	Setting	Function
HC (Hum Canceler):	Removes hum.	
Sw (Switch)	On, Off	Turns the hum canceler on or off.
Freq (Frequency)	20.0–800.0 Hz	Sets the frequency of hum to be removed.
Width (Width)	10–40%	Sets the width of the filter which will remove the hum.
Depth (Depth)	0–100	Sets the depth of the filter which will remove the hum.
Thresh (Threshold)	0–100	Sets the level at which the hum is to be removed.
RangeLo (Range Low)	Unlimit, 20 - 2000 Hz	Sets the lower limit of the frequency of hum to be removed. ^{*1}
RangeHi (Range High)	1.0 - 20.0 kHz, Unlimit	Sets the upper limit of the frequency of hum to be removed. ^{*2}
NS (Noise Suppressor):	Mutes noise in the silent mode.	
Sw (Switch)	On, Off	Turns the noise suppressor on or off.
Thresh (Threshold)	0–100	Sets the level to start muting noise.
Release (Release)	0–100	Sets the time over which the volume will drop to 0 after the noise starts being muted.

^{*1}: Setting to “Unlimit” means that the frequency that can be played back on this unit is the lower limit.

^{*2}: Setting to “Unlimit” means that the frequency that can be played back on this unit is the upper limit.

Stereo Multi

Parameter (full name)	Setting	Function
NS (Noise Suppressor): Mutes noise in the silent mode.		
Sw (Switch)	On, Off	Turns the noise suppressor on or off.
Thresh (Threshold)	0–100	Sets the level to start muting noise.
Release (Release)	0–100	Sets the time over which the volume will drop to 0 after the noise starts being muted.
Cmp (Compressor/Limiter): Compresses the entire output signals when the input volume exceeds a specified value.		
Sw (Switch)	On, Off	Turns the compressor on or off.
Thresh (Threshold Level)	-60–0 dB	Sets the level at which the compressor starts taking effect.
Ratio (Ratio)	1.5:1, 2:1, 4:1, 100:1	Sets the compression ratio applied when the threshold level is exceeded.
Attack (Attack Time)	0–100	Sets the time from when the input level exceeds the threshold level to when the effect begins to apply.
Release (Release Time)	0–100	Sets the time from when the input level drops below the threshold level to when the effect ceases to apply.
Level (Output Level)	-60–12 dB	Sets the volume of the compressor sound.
Enh (Enhancer): Accentuates the sound and push the sound forward.		
Sw (Switch)	On, Off	Turns the enhancer on or off.
Sens (Sense)	0–100	Sets the degree of the enhancer effect desired.
Freq (Frequency)	1.0–10.0 kHz	Sets the frequency at which the enhancer effect starts working.
MixLvl (Mix Level)	0–100	Sets the amount of the enhancer sound should be mixed into the direct sound.
Level (Level)	0–100	Sets the volume of the enhancer sound.
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
Low Gain (Low Gain)	-12– +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20 - 2000 Hz	Sets the center frequency in the low frequency band.
Low Q	0.3–10.0	Sets the width of the area around the low frequency that will be affected by the gain settings. ^{*1}
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
Mid Gain (Middle Gain)	-12– +12 dB	Sets the boost/cut amount in the middle frequency band.
Mid Freq (Middle Frequency)	200–8000 Hz	Sets the center frequency in the middle frequency band.
Mid Q (Middle Q)	0.3–10.0	Sets the width of the area around the middle frequency that will be affected by the gain settings.
High Gain	-12– +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.4–20.0 kHz	Sets the center frequency in the High frequency band.
High Q	0.3–10.0	Sets the width of the area around the High frequency that will be affected by the gain settings. ^{*1}
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Output Level)	0–100	Sets the volume after passing through the equalizer.

^{*1}: If Low Type (Lo Type) or High Type (Hi Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

Speaker Modeling

Models a variety of speaker characteristics ranging from those of High-end professional monitor speakers used as the standard at studios around the world to those of speakers of small-sized TV sets and portable radios.

Speaker Modeling is adjusted so that its optimal effect is achieved when a Roland Powered Monitor DS-90 is used in digital connection. Its effect may not be fully achieved with other types of speakers.

Speaker types applicable for modeling

The characteristics of the following types of speakers can be modeled. Set the desired type for Model.

THRU:	No modeling is to be performed.
Super FLAT:	DS-90 is corrected by modeling to produce wider-range and untwisted sounds.
Powered GenBlk:	Typical model of powered monitor (two-way type, the woofer diameter = 170 mm (6-1/2 inches))
Powered E-Bas:	Powered monitor characterized in delightful sound quality
Powered Mack:	Powered monitor characterized in well-extended low frequency band sounds
Small Cube:	Small-sized full-range speaker widely used in recording studios
White Cone:	Enclosed-type two-way speaker widely used in recording studios, characterized in white woofers.
White C +tissue:	Mild sounds from "White Cone" Tweeter covered with tissue paper
Small Radio:	Pocket-type small-sized radio
Small TV:	Speaker attached to the 14-inch TV set
Boom Box:	Radio cassette recorder
BoomBox LoBoost:	Radio cassette recorder with the low frequency band enhanced

Use "THRU" for clear comparison between sounds with and without modeling.

Parameter (full name)	Setting	Function
SpMod (Speaker Modeling): Selects the speaker subject to characteristics modeling.		
Sw (Switch)	Off, On	Turns the Speaker Modeling on or off.
Model (Model)	See the column on the previous page.	Specifies the speaker actually generating sounds.
Output Speakers (Output Speakers)	DS-90/DS-90A, DS-50A	
Phase (Phase)	NRM, INV	Sets the phase of the speaker. "NRM" for the same phase, and "INV" for the inverted phase.
BCut (Bass Cut Filter): Cuts off undesired low sounds such as pop noise.		
Sw (Switch)	On, Off	Turns the bass cut filter on or off.
Freq (Frequency)	Thru, 20 - 2000 Hz	Sets the frequency for cutting off undesired low frequency band sounds such as pop noise.
LFT (Low Frequency Trimmer): Adjusts the low frequency band sounds.		
Sw (Switch)	On, Off	Turns the low frequency trimmer on or off.
Gain (Gain)	-12- +12dB	Sets the boost/cut amount.
Freq (Frequency)	20-2000 Hz	Sets the center frequency of the trimmer.
HFT (High Frequency Trimmer): Adjusts the High frequency band sounds.		
Sw (Switch)	On, Off	Turns the High frequency trimmer on or off.
Gain (Gain)	-12- +12dB	Sets the boost/cut amount.
Freq (Frequency)	1.0-20.0 kHz	Sets the center frequency.
Lmt (Limiter): Prevents distortion by suppressing signals at High levels.		
Sw (Switch)	On, Off	Turns the limiter on or off.
Thresh (Threshold)	-60-0 dB	Sets the volume at which the limiter starts working.
Release (Release)	0-100	Sets the time from when the input level drops below the threshold level to when the effect ceases to apply.
Level (Level)	-60- +24 dB	Sets the volume after passing through the limiter.

Mastering Tool Kit

This Kit is a compressor that splits sounds into different frequency band to unify their volumes. With this feature, you can perform mastering at the optimized level when mixing down into an MD or a CD or when producing your original audio CD using the CD-R disk.

Effect of “Detect Time” under Input

With ordinary compressors, a moment of delay occurs to suppress a level over instance after it has been detected. With this algorithm, this problem is bypassed by using the input sound only for level detection and adding a specified length of delay to the sound for processing and output. “Detect Time” under Input is the setting of the delay time for this purpose. Note that supplying Detect Time causes time difference between input and output of audio signals, requiring due considerations if used for operations other than mastering (ex. channel insertion).

Splitting into frequency bands

To split into High, middle and low frequency bands, Low Split Point (LoSplit Point) and High Split Point (HiSplit Point) under Input are used to specify frequencies.

Parameter (full name)	Setting	Function
EQ (Equalizer)		
Sw (Switch)	On, Off	Turns the equalizer on or off.
InputG (Input Gain)	-24~ +12 dB	Sets the overall volume before passing through the equalizer.
Low Gain (Low Gain)	-12~ +12 dB	Sets the boost/cut amount in the low frequency band.
Low Freq (Low Frequency)	20~2000 Hz	Sets the center frequency in the low frequency band.
Low Q (Low Q)	0.3~16.0	Sets the width of the area around the low frequency that will be affected by the gain settings.*1
Low Type	Shlv, Peak	Sets the type of the low frequency band equalizer (Shlving type or peaking type).
LoMid Gain (Low Middle Gain)	-12~ +12 dB	Sets the boost/cut amount in the low middle frequency band.
LoMid Freq (Low Middle Frequency)	20~8000 Hz	Sets the center frequency in the low middle frequency band.
LoMid Q (Low Middle Q)	0.3~16.0	Sets the width of the area around the low middle frequency that will be affected by the gain settings.
HiMid Gain (High Middle Gain)	-12~ +12 dB	Sets the boost/cut amount in the High frequency band.
HiMid Freq (High Middle Frequency)	20~8000 Hz	Sets the center frequency in the High middle frequency band.
HiMid Q (High Middle Q)	0.3~16.0	Sets the width of the area around the High middle frequency that will be affected by the gain settings.
High Gain (High Gain)	-12~ +12 dB	Sets the boost/cut amount in the High frequency band.
High Freq (High Frequency)	1.40~20.0 kHz	Sets the center frequency in the High frequency band.
High Q (High Q)	0.3~16.0	Sets the width of the area around the High frequency that will be affected by the gain settings.*1
Hi Type (High Type)	Shlv, Peak	Sets the type of the High frequency band equalizer (Shlving type or peaking type).
Level (Level)	-24~ +12 dB	Sets the overall volume after passing through the equalizer.
BCut (Bass Cut Filter):		
Cuts off undesired low frequency band sounds such as pop noise.		
Sw (Switch)	On, Off	Turns the bass cut filter on or off.
Freq (Frequency)	Thru, 20 - 2000 Hz	Sets the frequency for cutting off undesired low frequency band sounds such as pop noise.
Enh (Enhancer):		
Accentuates the sound and push the sound forward.		
Sw (Switch)	On, Off	Turns the enhancer on or off.
Sens (Sensitivity)	0~100	Sets the degree of the enhancer effect desired.
Freq (Frequency)	1.00~10.0 kHz	Sets the frequency at which the enhancer effect starts working.
MixLvl (Mix Level)	-24~ +12dB	Set the amount of the enhancer sound to be added to the direct sound.
In (Input):		
Splits the direct sound into three frequency bands, that is, low, middle and High frequency bands.		
InGain (Input Gain)	-24~ +12dB	Sets the overall volume before entering expander/compressor.
D-Time (Detect Time)	0~10 ms	Sets the length of delay to add to the direct sound input.
Split Point Low (Low Split Point)	20~800 Hz	Sets the frequency at which the direct sound is split into three bands (on the low frequency band side).
Split Point High (High Split Point)	1.60~16.0 kHz	Sets the frequency at which the direct sound is split into three bands (on the High frequency band side).

Exp (Expander):**Expands the dynamic range at a certain ratio.**

Sw (Switch)	On, Off	Turns the expander on or off.
Low Thre (Low Threshold)	-80-0 dB	Sets the volume at which the expander for the low frequency band starts working.
Low Ratio (Low Ratio)	1:1.0-1:16, 1:INF	Sets the ratio at which the output in the low frequency band is increased when the input level has exceeded below the low threshold level.
Low Atck (Low Attack)	0-100 ms	Sets the time until when the low frequency band expander starts working after the input level drops below the low threshold level.
Low Rel (Low Release)	50 ms-5.000 s	Sets the time until when the High frequency band expander stops working after the input level exceeds the low threshold level.
Mid Thre (Middle Threshold)	-80-0 dB	Sets the volume at which the expander for the middle frequency band starts working.
Mid Ratio (Middle Ratio)	1:1.0-1:16, 1:INF	Sets the ratio at which the output in the middle frequency band is increased when the input level has exceeded below the middle threshold level.
Mid Atck (Middle Attack)	0-100 ms	Sets the time until when the middle frequency band expander starts working after the input level drops below the middle threshold level.
Mid Rel (Middle Release)	50 ms-5.000 s	Sets the time until when the middle frequency band expander stops working after the input level exceeds the middle threshold level.
High Thre (High Threshold)	-80-0 dB	Sets the volume at which the expander for the High frequency band starts working.
High Ratio (High Ratio)	1:1.0-1:16, 1:INF	Sets the ratio at which the output in the High frequency band is increased when the input level has exceeded below the High threshold level.
High Atck (High Attack)	0-100 ms	Sets the time until when the High frequency band expander starts working after the input level drops below the High threshold level.
High Rel (High Release)	50 ms-5.000 s	Sets the time until when the High frequency band expander stops working after the input level exceeds the High threshold level.

Cmp (Compressor): Compresses the entire output signals when the input volume exceeds a specified value.

SW (Switch)	On, Off	Turns the compressor on or off.
Low Thre (Low Threshold)	-24-0 dB	Sets the volume at which the compressor for the low frequency band starts working.
Low Ratio (Low Ratio)	1:1.0-1:16, 1:INF	Sets the ratio at which the output in the low frequency band is suppressed when the input level has exceeded the low threshold level.
Low Atck (Low Attack)	0-100 ms	Sets the time until when the low frequency band compressor starts working after the input level has exceeded the low threshold level.
Low Rel (Low Release)	50 ms-5.000 s	Sets the time until when the low frequency band compressor stops working after the input level has dropped below the low threshold level.
Mid Thre (Middle Threshold)	-24-0 dB	Sets the volume at which the compressor in the middle frequency band starts working.
Mid Ratio (Middle Ratio)	1:1.0-1:16, 1:INF	Sets the ratio at which the output in the middle frequency band is suppressed when the input level has exceeded the middle threshold level.
Mid Atck (Middle Attack)	0-100 ms	Sets the time until when the middle frequency band compressor starts working after the input level has exceeded the middle threshold level.
Mid Rel (Middle Release)	50 ms-5.000 s	Sets the time until when the middle frequency band compressor stops working after the input level has dropped below the middle threshold level.
High Thre (High Threshold)	-24-0 dB	Sets the volume at which the compressor for the High frequency band starts working.
High Ratio (High Ratio)	1:1.0-1:16, 1:INF	Sets the ratio at which the output in the High frequency band is suppressed when the input level has exceeded the High threshold level.
High Atck (High Attack)	0-100 ms	Sets the time until when the High frequency band compressor starts working after the input level has exceeded the High threshold level.
High Rel (High Release)	50 ms-5.000 s	Sets the time until when the High frequency band compressor stops working after the input level has dropped below the High threshold level.

Mix (Mixer):**Adjusts the volume by frequency band.**

Low Level (Low Level)	-80- +6 dB	Sets the volume in the low frequency band after passing through the expander and compressor.
Mid Level (Middle Level)	-80- +6 dB	Sets the middle frequency band volume after passing through the expander and compressor.
High Level (High Level)	-80- +6 dB	Sets the volume in the High frequency band after passing through the expander and compressor.

Lmt (Limiter):**Prevents distortion by suppressing signals at high levels.**

Sw (Switch)	On, Off	Turns the limiter on or off.
Thresh (Threshold)	-24-0 dB	Sets the volume at which the limiter starts working.
Attack (Attack)	0-100 ms	Sets the time until when the limiter starts working after the input level has exceeded threshold level.
Release (Release)	50 ms-5.000 s	Sets the time until when the limiter stops working after the input level drops below the threshold level.

Out (Output):**Provides settings concerning overall output.**

SoftClip (Soft Clip)	On, Off	Suppresses conspicuous distortion that may occur when the effect of compressor/limiter has been applied excessively.
Level (Level)	-80- +6 dB	Sets the overall volume after passing through the limiter.

*1: If Low Type (Lo Type) or High Type (Hi Type) is set to "Shlv (Shlving Type)," the setting for Lo Q or High Q is invalid.

* With Compressor, the level is automatically adjusted to the optimal with the settings for Threshold (Thres) and Ratio (Ratio). Setting Attack (Atck) to a relatively long time may cause distortion. For this reason, a margin of -6 dB is provided. Adjust the Mixer (Mix) level as required.

* "Mastering Tool Kit" cannot be used on EFFECT2, 4, and 6 (even-numbered effects).

* When "Mastering Tool Kit" is used on EFFECT1, 3, and 5 (odd-numbered effects), EFFECT2, 4, and 6 (even-numbered effects) cannot be used.

MIDI Implementation

Model VS-2000 Version 1.00

Oct. 31, 2003

1. TRANSMITTED DATA AND RECOGNIZED RECEIVE DATA

■ Channel Voice message

● Note On/Off

If the UTILITY mode METRONOME screen's METRONOME OUT setting is set to MIDI, the metronome will be output as the specified note number and velocity on the specified MIDI channel.

Note on/off messages are received if the Voice Transformer (algorithm 27) patch is selected for effect 1,3, or 5, and the MIDI Control SW is On.

If the HARMONY ASSIGN screen's USE EFFECT BOARD setting is On, note on/off messages will be received on the MIDI channel specified by the HARMONY ALGORITHM VIEW screen's MIDI setting.

If the RHYTHM TRACK MIDI transmit channel is specified, messages will be transmitted when you press [TRACK/STATUS] in the RHYTHM TRACK PATTERN EDIT screen, or when the RHYTHM TRACK is played back.

Status	Second	Third
9nH	mmH	lIH
n = MIDI Channel No.:	0H - FH (ch.1-ch.16) (*1, *3, *4)	
	0H - 5H (ch.1-ch.6) (*2)	
mm = Note No.:	0CH - 7FH (12 - 127) (*1)	
	24H - 54H (38 - 84) (*2, *3)	
	00H - 7FH (0 - 127) (*4)	
lI = Velocity:	01H - 7FH (1 - 127) / 00H = NOTE OFF	

(*1) Only when transmitting Metronome.

(*2) Only when receiving with MIDI CONTROL Sw of Voice Transformer is On.

n = 0,2,4 (FX1,3,5) : Voice Transformer : Chromatic Pitch

mm = 24H - 54H (C2 - C6)

lI = Ignored

n = 1,3,5 (FX1,3,5) : Voice Transformer : Chromatic Formant

mm = 24H - 3CH (C2 - C4)

lI = Ignored

(*3) Only if the HARMONY ASSIGN screen's USE EFFECT BOARD setting is On, and the receive channel is specified by the HARMONY ALGORITHM VIEW screen's MIDI setting.

(*4) Only if tracks 17/18 are assigned to RHYTHM TRACK and the RHYTHM TRACK MIDI transmit/receive channel is specified.

● Control Change

Parameters on the Mixer section can be received and transmitted by the control change messages when MIXER CONTROL TYPE in the UTILITY-MIDI screen is set to C.C.

If V-LINK function is enable, see "5.V-LINK."

NRPN(MSB/LSB)

Parameters on the Mixer/Effect section can be changed when UTILITY-MIDI screens EFFECT C.C. Rx Sw is "On."

Status	Second	Third
BnH	62H	llH
BnH	63H	mmH

n = MIDI Channel No.: 0H - 5H (ch.1 = FX1 ch.2 = FX2 ch.3 = FX3 ch.4 = FX4 ch.5 = FX5 ch.6 = FX6)
8H - 9H (ch.9 = Input Mixer, ch.10 = Track Mixer)
mm = upper byte of the parameter number to be assigned with NRPN. :

00H n = 0H - 3H
00H - 17H (1 - 24) n = 8H - 9H

ll =lower byte of the parameter number to be assigned with NRPN.:
00H - 3EH (0 - 62)

Data Entry (MSB/LSB)

When UTILITY-MIDI screens EFFECT C.C. Rx Sw is "On," controls effect parameter assigned with NRPN.

Status	Second	Third
BnH	06H	mmH
BnH	26H	llH

n = MIDI Channel No.: 0H - 5H (ch.1 = FX1 ch.2 = FX2 ch.3 = FX3 ch.4 = FX4 ch.5 = FX5 ch.6 = FX6)
8H - 9H (ch.9 = Input Mixer, ch.10 = Track Mixer)
mm = upper byte of the parameter number to be assigned with NRPN.

ll =lower byte of the parameter number to be assigned with NRPN.

<Ex>
mmH llH = 40H 00H = -8192
= 7FH 7FH = -1
= 00H 00H = 0
= 3FH 7FH = +8191

Data Increment

When UTILITY-MIDI screens EFFECT C.C. Rx Sw is "On," increments the effect parameter assigned with NRPN.

Status	Second	Third
BnH	60H	00H

n = MIDI Channel No.: 0H - 5H (ch.1 = FX1 ch.2 = FX2 ch.3 = FX3 ch.4 = FX4 ch.5 = FX5 ch.6 = FX6)
8H - 9H (ch.9 = Input Mixer, ch.10 = Track Mixer)

Increment the effect parameter selected with NRPN.

Data Decrement

When UTILITY-MIDI screens EFFECT C.C. Rx Sw is "On," decrements the effect parameter assigned with NRPN.

Status	Second	Third
BnH	61H	00H

n = MIDI Channel No.: 0H - 5H (ch.1 = FX1 ch.2 = FX2 ch.3 = FX3 ch.4 = FX4 ch.5 = FX5 ch.6 = FX6)
8H - 9H (ch.9 = Input Mixer, ch.10 = Track Mixer)

Decrement the effect parameter selected with NRPN.

● Program Change

Parameters on the Mixer/Effect section can be changed when UTILITY-MIDI screens EFFECT P.C.Rx Sw is "On."

When UTILITY-MIDI screens EFFECT P.C. Rx Sw is "On," 00H-03H is received if it operates as the Effect Program Change.

When UTILITY-MIDI screens SCENE P.C. Rx Sw is "On," MIDI Channel No. FH is received if it operates as the Scene Change.

If V-LINK function is enable, see "5.V-LINK."

If tracks 17/18 are assigned as RHYTHM TRACK, these messages are received on the MIDI channel specified by the RHYTHM TRACK MIDI receive channel setting, and will change drum kits.

(-8192 - 0 - +8191)

(*1) Only if the HARMONY ASSIGN screen's USE EFFECT BOARD setting is On, and the receive channel is specified by the HARMONY ALGORITHM VIEW screen's MIDI setting.

■ System Common Messages

● MIDI Time Code Quarter Frame Messages

MIDI Time Code Quarter Frame Messages can be transmitted while the VS-2000 is running (Playing or Recording) if the UTILITY-SYNC screens SYNC MODE is "INT" and SYNC Gen. is "MTC."

The transmitted time counts are summed to "SYNC OFF SET TIME" as the project top is "00:00:00:00."

The VS-2000 synchronizes with the time counts which are summed to "SYNC OFFSET TIME" as the project top is "00:00:00:00" if the SYNC screens SYNC MODE is "EXT."

Status	Second
F1H	mmH (= 0nnndddd)

nnn = Message type :

- 0 = Frame count LS nibble
- 1 = Frame count MS nibble
- 2 = Seconds count LS nibble
- 3 = Seconds count MS nibble
- 4 = Minutes count LS nibble
- 5 = Minutes count MS nibble
- 6 = Hours count LS nibble
- 7 = Hours count MS nibble

dddd = 4bit nibble data : 0H - FH (0 - 15)

If the upper and lower 4 bits of the count are combined, these bit fields are assigned as follows.

Frame Count	xxxxyyyy	
	xxx	Reserved (000)
	yyyyy	Frame No. (0-29)

Seconds Count	xyyyyyyy	
	xx	Reserved (00)
	yyyyyy	Seconds Count (0-59)
Minutes Count	xyyyyyyy	
	xx	Reserved (00)
	yyyyyy	Minutes Count (0-59)

F0H	Status of System Exclusive Message	
iiH	Manufacturer ID	
	41H Roland's Manufacturer ID	
	7EH Universal Non Real-time Message	
	7FH Universal Real-time Message	
ddH	Data: 00H - 7FH(0 - 127)	
:	:	
eeH	Data	
F7H	EOX (End of System Exclusive message)	

The VS-2000 can transfer and receive the internal parameters information using system exclusive messages, and also can be controlled by the external devices using system exclusive message.

The VS-2000 can transmit and receive Universal System Exclusive messages, Data Request (RQ1) and Data set (DT1) as the System Exclusive Message.

○About Model ID

The Model ID of the VS-2000 is 00H,61H as for Data Request (RQ1) and Data set (DT1). The VS-2000 also can receive 00H,61H (VS-2000) and 00,36H (VE-7000).

○About Device ID

System Exclusive messages are not assigned to any particular MIDI channel. Instead, they have their own special control parameter called device ID.

The Roland system exclusive messages use device IDs to specify multiple VS-2000 units.

The VS-2000 sends system exclusive messages using 00H-1FH, and receives the system exclusive messages whose device ID is same as its device ID and 7FH. the value of the device ID is the value set on the UTILITY-MIDI screens DEVICE ID minus one.

● Universal System Exclusive message

○Identity Request

Status	Data Byte	Status
F0H	7EH,Dev,06H,01H	F7H
Byte	Description	
F0H	Status of System Exclusive Message	
7EH	Universal System Exclusive message Non Real-time header	
Dev	Device ID (or 7FH)	
06H	General Information (sub-ID #1)	
01H	Identify Request (sub-ID #2)	
F7H	EOX (End of System Exclusive message)	

The message is used to request the particular information of the VS-2000.
The VS-2000 does not transmit the message.
If the VS-2000 received the message and the device ID of the message is same as its device.
ID or 7FH, the VS-2000 transmits the following Identify Reply message.

○Identity Reply

Status	Data Byte	Status

F7H	EOX (End of System Exclusive message)	

This message is used to request parameters from the VS-2000.
The VS-2000 does not transmit this message.
When this message is received, the requested data will be transmitted if the following conditions are satisfied.

1. The address specified by RQ1 corresponds to one of the applicable parameter base addresses of the VS-2000.
2. The requested size is 1 or greater.

If the above conditions are satisfied, the corresponding parameters will be transmitted in the form described in Data Set (DT1).

○Data Set (DT1)

<Model ID = 00H 70H (VS-2000)>

○The message is transmitted under the following condition.

If the device ID on the message is same as that of the receive device, and the address on the message correspond to the specified parameter base address, the received data are stored form the specified parameter base address.
If the interval of received messages is shorter than 25 msec, the VS-2000 can not work the receive message procedure correctly.

2. Data Transfer Address Map

■ Address Block

<Model ID = 00H 70H (VS-2000)>

Address are expressed in 7bit hexadecimal values.

(*) Addresses with a “#” are ignored, even when sent as the Start Address.
Transmit the Data Set (DT1) or Data Request (RQ1) message with the specified size to the address without “#” mark.

(*1) Time parameters are set to the relocated time (REL) that the time of project top is “00h00m00s00f00.”

(*2) The VS-2000 treats the 16 sample as 1 block for managing internal time. And time parameter cannot be set to over 24 hours.

Ex.1) Set the time 00h01m00s00f00(FRAME RATE = 30Non-Drop)
2646000 sample = 165375 block = 00 00 00 02 08 05 0F 0F (4bit nibble)

Ex.2) 23h59m59s29f00(FRAME RATE = 30 Non-Drop)
Sampling Frequency is 44.1kHz:
3810238530 sample = 238139908 block = 00 0E 03 01 0B 0A 00 04 (4bit nibble)

(*3) The Loop Start point must be before the Loop Stop point.
The Auto Puunch In point must be before the Auto Punch Out point.
If the interval of each point is shorter than 1 sec, the VS-2000 does not work correctly.

(*4) Read/Write/Erase of the Mark points are done by writing operation mode to the marker command. Set the value of the Marker time and marker Number, before setting the value of the Marker command.

Ex.1) Delete all mark points (Device ID = 10)
(HOST) => F0 41 10 00 61 12 02 09 00 00 0F 0F 0F 0F 0F 0F 7D F7 => (VS-2000)
(HOST) => F0 41 10 00 61 12 02 09 01 00 02 72 F7 => (VS-2000)
(HOST) <= F0 41 10 00 61 12 02 09 00 00 00 00 00 00 00 00 75 F7 <= (VS-2000)

The MARKER CLEAR command is issued with specifying time "FFFFFFF".
The return value "0" is a sum of mark points.

Ex.2) Write the mark point (Device ID = 10)
(HOST) => F0 41 10 00 61 12 02 09 00 00 0a 0a 0a 0a 0a 0a ss F7 => (VS-2000)
aaaaaaa = time of Marker, ss = check sum
(HOST) => F0 41 10 00 61 12 02 09 01 00 01 73 F7 => (VS-2000)
(HOST) <= F0 41 10 00 61 12 02 09 00 00 0n 0n 0n 0n 0n 0n ss F7 <= (VS-2000)
nnnnnnnn = total Marker number, ss = check sum

If the total of mark point is over 1000, the VS-2000 ignores the writing and returns the total numbers of the mark points.
If the mark point already exists 0.1 msec near the new mark point, the VS-2000 ignores the writing and returns the total numbers of the mark points.

Ex.3) Read the mark point #3 (Device ID = 10)
(HOST) => F0 41 10 00 61 12 02 09 00 00 00 00 00 00 00 03 72 F7 => (VS-2000)
(HOST) => F0 41 10 00 61 12 02 09 01 00 00 74 F7 => (VS-2000)
(HOST) <= F0 41 10 00 61 12 02 09 00 00 0n 0n 0n 0n 0n 0n ss F7 <= (VS-2000)
nnnnnnnn = total Marker number, ss = check sum
(HOST) <= F0 41 10 00 61 12 02 09 00 00 0a 0a 0a 0a 0a 0a ss F7 <= (VS-2000)
aaaaaaa = time of Marker #3, ss = check sum

If the mark point is less than 3, the VS-2000 does not return the block of "aaaaaaa."

Ex.4) Read all mark points (Device ID = 10)
(HOST) => F0 41 10 00 61 12 02 09 00 00 0F 0F 0F 0F 0F 0F 7D F7 => (VS-2000)
FFFFFFF(>= 1000) means All Marker
(HOST) => F0 41 10 00 61 12 02 09 01 00 00 74 F7 => (VS-2000)
(HOST) <= F0 41 10 00 61 12 02 09 00 00 0n 0n 0n 0n 0n 0n ss F7 <= (VS-2000)
nnnnnnnn = total Marker number, ss = check sum
(HOST) <= F0 41 10 00 61 12 02 09 00 00 0a 0a 0a 0a 0a 0a ss F7 <= (VS-2000)
aaaaaaa = time of Marker #1, ss = check sum
(HOST) <= F0 41 10 00 61 12 02 09 00 00 0b 0b 0b 0b 0b 0b ss F7 <= (VS-2000)
bbbbbbb = time of Marker #2, ss = check sum
:
(HOST) <= F0 41 10 00 61 12 02 09 00 00 0x 0x 0x 0x 0x 0x ss F7 <= (VS-2000)
xxxxxxx = time of the last Marker#, ss = check sum

If the mark point does not exist, the VS-2000 does not return blocks under "aaaaaaa."

Ex.5) Delete the mark point (Device ID = 10)
(HOST) => F0 41 10 00 61 12 02 09 00 00 0a 0a 0a 0a 0a 0a ss F7 => (VS-2000)
aaaaaaa = time of Marker, ss = check sum
(HOST) => F0 41 10 00 61 12 02 09 01 00 02 72 F7 => (VS-2000)
(HOST) <= F0 41 10 00 61 12 02 09 00 00 0n 0n 0n 0n 0n 0n ss F7 <= (VS-2000)
nnnnnnnn = total marker number, ss = check sum

The VS-2000 deletes the mark point which includes specified time, and returns the total numbers of the mark point.

Ex.6) Read the name of mark point #3 (Device ID = 10)
(HOST) => F0 41 10 00 61 12 02 09 00 00 00 00 00 00 00 03 72 F7 => (VS-2000)
(HOST) => F0 41 10 00 61 12 02 09 01 00 03 71 F7 => (VS-2000)
(HOST) <= F0 41 10 00 61 12 02 09 00 00 0n 0n 0n 0n 0n 0n ss F7 <= (VS-2000)
nnnnnnnn = total Marker number, ss = check sum
(HOST) <= F0 41 10 00 61 12 02 09 00 08 aa bb cc dd ee ff gg hh ii jj kk ll ss F7 <= (VS-2000)
abcdefghijkl = name of Marker #3, ss = check sum

If the mark point is less than 3, the VS-2000 does not return the block of "abcdefghijkl."

Ex.7) Write the name to the mark point #3(Device ID = 10)
(HOST) => F0 41 10 00 61 12 02 09 00 00 00 00 00 00 00 03 72 F7 => (VS-2000)
(HOST) => F0 41 10 00 61 12 02 09 00 08 aa bb cc dd ee ff gg hh ii jj kk ll ss F7 => (VS-2000)
abcdefghijkl = name of Marker #3, ss = check sum
(HOST) => F0 41 10 00 61 12 02 09 01 00 04 70 F7 => (VS-2000)
(HOST) <= F0 41 10 00 61 12 02 09 00 00 0n 0n 0n 0n 0n 0n ss F7 <= (VS-2000)
nnnnnnnn = total Marker number, ss = check sum

If the mark point is less than 3, the VS-2000 ignores the writing and returns the total numbers of the mark points.

● Effect Parameter

○Basic Address

Start address	Contents and remarks
05 00 00 00	0aaaaaaa EFFECTOR - 1 Algorithm
05 00 00 01#	0bbbbbbb (0:Reverb *1) 1:Delay 2:Stereo Delay Chorus 3:Stereo Pitch Shifter Delay 4:Vocoder 5:2ch RSS 6:Delay RSS 7:Chorus RSS 8:Guitar Multi 1 9:Guitar Multi 2 10:Guitar Multi 3 11:Vocal Multi 12:Rotary 13:Guitar Amp Modeling 14:Stereo Phaser 15:Stereo Flanger 16:Dual Comp/Limiter (17:Gate Reverb *1) 18:Multi Tap Delay 19:Stereo Multi 20:Reverb 2 21:Space Chorus 22:Lo-Fi Processor 23:4Band Parametric Equalizer 24:10Band Graphic Equalizer 25:Hum Canceler 26:Vocal Canceler (27:Voice Transformer *1,*2) (28:Vocoder 2 *1,*2) 29:Mic Modeling 30:3Band Isolator 31:Tape Echo 201 32:Analog Flanger 33:Analog Phaser 34:Speaker Modeling (35:Mastering Tool Kit *1,*2)

05 00 00 02	20 - 7F	EFFECTOR - 1 Name -1 (ASCII)
05 00 00 0D	20 - 7F	EFFECTOR - 1 Name -12
05 00 00 0E	00 - 7F	EFFECTOR - 1 Parameter Area (See Below)
05 00 7F 7F	00 - 7F	:
05 01 00 00	00 -	EFFECTOR - 2 (similar to 05 00 00 00 - 05 00 7F 7F)
05 01 7F 7F	00 -	:
05 02 00 00	00 -	EFFECTOR - 3 (similar to 05 00 00 00 - 05 00 7F 7F)
05 02 7F 7F	00 -	:
05 03 00 00	00 -	EFFECTOR - 4 (similar to 05 00 00 00 - 05 00 7F 7F)
05 03 7F 7F	00 -	:
05 04 00 00	00 -	EFFECTOR - 5 (similar to 05 00 00 00 - 05 00 7F 7F)
05 04 7F 7F	00 -	:
05 05 00 00	00 -	EFFECTOR - 6 (similar to 05 00 00 00 - 05 00 7F 7F)
05 05 7F 7F	00 -	:

(*1) Cannot select "0:Reverb," "17:Gate Reverb," "27:Voice Transformer," "28:Vocoder2," or "35:Mastering Tool Kit" on Effect 2, 4, and 6.

(*2) If "27:Voice Transformer," "28:Vocoder2," or "35:Mastering Tool Kit" is selected at Effect 1, 3, or 5, Effect 2, 4, or 6 is invalid.

* A meaning of the parameter area changes correspond with the top of parameter of Effect Algorithm. See the following tables. The address shows at Effect 1.

* If select the different Algorithm type from current one, all parameters will be copied from the preset patch data which selected Algorithm.

○Algorithm 0 Reverb (FX1,FX3,FX5)

3. MIDI Machine Control

■ MIDI Machine Control Details

● STOP(MCS)

Status	Data Byte	Status
F0H	7FH,Dev,06H,01H	F7H

Byte	Description
F0H	Status of System Exclusive Message
7FH	Universal System Exclusive Real-time Header
Dev	Device ID (or 7FH)
06H	MMC Command Message
01H	STOP(MCS)
F7H	EOX (End of System Exclusive message)

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 stops immediately.
If the transport switch [STOP] was pressed, the VS-2000 transmits as the device ID 7FH.

● PLAY(MCS)

Status	Data Byte	Status
F0H	7FH,Dev,06H,02H	F7H

Byte	Description
F0H	Status of System Exclusive Message
7FH	Universal System Exclusive Real-time Header
Dev	Device ID (or 7FH)
06H	MMC Command Message
02H	PLAY(MCS)
F7H	EOX (End of System Exclusive message)

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 goes into the play back condition.
The VS-2000 does not transmit this message.

● DEFERRED PLAY(MCS)

Status	Data Byte	Status
F0H	7FH,Dev,06H,03H	F7H

Byte	Description
F0H	Status of System Exclusive Message
7FH	Universal System Exclusive Real-time Header
Dev	Device ID (or 7FH)
06H	MMC Command Message
03H	DEFERRED PLAY(MCS)
F7H	EOX (End of System Exclusive message)

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 goes into the play back condition after the locate operation.
If the transport switch [PLAY] was pressed, the VS-2000 transmits as the device ID 7FH.

● FAST FORWARD(MCS)

Status	Data Byte	Status
F0H	7FH,Dev,06H,04H	F7H

Byte	Description
F0H	Status of System Exclusive Message
7FH	Universal System Exclusive Real time Header
Dev	Device ID (or 7FH)
06H	MMC Command Message
04H	FAST FORWARD (MCS)
F7H	EOX (End of System Exclusive message)

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 goes into the fast forward condition.
The VS-2000 does not transmit this message.

● REWIND(MCS)

Status	Data Byte	Status
F0H	7FH,Dev,06H,05H	F7H

Byte	Description
F0H	Status of System Exclusive Message
7FH	Universal System Exclusive Real time Header
Dev	Device ID (or 7FH)
06H	MMC Command Message
05H	REWIND(MCS)
F7H	EOX (End of System Exclusive message)

If the device ID on the message was as same as that of the receiving device or 7FH, the

VS-2000 goes into the rewind condition.
The VS-2000 does not transmit this message.

● RECORD STROBE

Status	Data Byte	Status
F0H	7FH,Dev,06H,06H	F7H

Byte	Description
F0H	Status of System Exclusive Message
7FH	Universal System Exclusive Real-time Header
Dev	Device ID (or 7FH)
06H	MMC Command Message
06H	RECORD STROBE
F7H	EOX (End of System Exclusive message)

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 goes into the following condition.

1. The VS-2000 is in the play back condition. Start Recording the tracks that status are the record standby mode.
2. The VS-2000 is in the stop condition. Start Playing back and Start Recording the track that status are the record standby mode.

If the transport switch [REC] was pressed out of the recording condition, the VS-2000 transmits as the device ID 7FH.ccH,ddH,eeH,,,ffH,,,

● RECORD EXIT

Status	Data Byte	Status
F0H	7FH,Dev,06H,07H	F7H

Byte	Description
F0H	Status of System Exclusive Message
7FH	Universal System Exclusive Real-time Header
Dev	Device ID (or 7FH)
06H	MMC Command Message
07H	RECORD EXIT
F7H	EOX (End of System Exclusive message)

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 exit from the record condition.
If the transport switch [REC] was pressed while recording, the VS-2000 transmits as the device ID 7FH.

● MMC RESET

Status	Data Byte	Status
F0H	7FH,Dev,06H,0DH	F7H

Byte	Description
F0H	Status of System Exclusive Message
7FH	Universal System Exclusive Real-time Header
Dev	Device ID (or 7FH)
06H	MMC Command Message
0DH	MMC RESET
F7H	EOX (End of System Exclusive message)

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 resets all communication channels related with MMC.
When powered on the VS-2000 transmits as the device ID 7FH.

● WRITE

Status	Data Byte	Status
F0H	7FH,Dev,06H,40H,ccH,ddH,eeH,,,ffH,,,	F7H

Byte	Description
F0H	Status of System Exclusive Message
7FH	Universal System Exclusive Real-time Header
Dev	Device ID (or 7FH)
06H	MMC Command Message
40H	WRITE
ccH	Information Bytes follows the command
ddH	The name of the writable information field.
eeH	Information Field Format
:	:
ffH	Field names and data
:	:
F7H	EOX (End of System Exclusive message)

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 write the data to the specified information field.
The VS-2000 does not transmit this message.

● MASKED WRITE

Status	Data Byte	Status
F0H	7FH,Dev,06H,41H,04H,ddH,eeH,ffH,ggH	F7H
Byte	Description	
F0H	Status of System Exclusive Message	
7FH	Universal System Exclusive Real-time Header	
Dev	Device ID (or 7FH)	
06H	MMC Command Message	
41H	MASKED WRITE	
04H	Number of Bytes follows the command	
ddH	The name of the masked type writable Information Field	
eeH	Byte number to write in the Bit Map	
ffH	bit location of the bit map byte to change	
ggH	New data to write to the specified bit map byte	
F7H	EOX (End of System Exclusive message)	

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 writes the data to the specified bit map byte.
The VS-2000 does not transmit this message.

● LOCATE(MCP)

○Format 1 - LOCATE[I/F]

Status	Data Byte	Status
F0H	7FH,Dev,06H,44H,02H,00H,nnH	F7H
Byte	Description	
F0H	Status of System Exclusive Message	
7FH	Universal System Exclusive Real-time Header	
Dev	Device ID (or 7FH)	
06H	MMC Command Message	
44H	LOCATE (MCP)	
02H	umber of Bytes	
00H	"I/F" sub command	
nnH	Information Field (08H, 09H, 0AH, 0BH, 0CH, 0DH, 0EH, 0FH)	
F7H	EOX (End of System Exclusive message)	

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 locates the selected time location stored to the specified information filed.
The VS-2000 does not transmit this message.

○Format 2 - LOCATE[TARGET]

Status	Data Byte	Status
F0H	7FH,Dev,06H,44H,06H,01H,hrH,mnH,scH,frH,ffH	F7H
Byte	Description	
F0H	Status of System Exclusive Message	
7FH	Universal System Exclusive Real-time Header	
Dev	Device ID (or 7FH)	
06H	MMC Command Message	
44H	LOCATE(MCP)	
06H	Number of Bytes	
01H	"TARGET" sub command	
hrH,mnH,scH,frH,ffH	Standard time with Sub Frame	
F7H	EOX (End of System Exclusive message)	

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 locates the specified time location received from the command.
If the efficient locate number or marker number is selected, the VS-2000 transmits as the device ID 7FH.

● MOVE

Status	Data Byte	Status
F0H	7FH,Dev,06H,4CH,02H,ddH,ssH	F7H
Byte	Description	
F0H	Status of System Exclusive Message	
7FH	Universal System Exclusive Real-time Header	
Dev	Device ID (or 7FH)	
06H	MMC Command Message	
4CH	MOVE	
02H	Number of Bytes	
ddH	Name of the Efficient Destination Information Field (08H,09H,0AH,0BH,0CH,0DH,0EH,0FH)	
ssH	Name of the Efficient Source Information Field (01H)	
F7H	EOX (End of System Exclusive message)	

If the device ID on the message was as same as that of the receiving device or 7FH, the VS-2000 transfers the data on the selected source information filed to the destination Information Field, if the name of both information fields in efficient.
The VS-2000 does not transmit this message.

● The efficient Information Field

The followings are the efficient Information Field on the VS-2000.
The name of the efficient destination Information Field:

01H	SELECTED TIME CODE
08H	GP0 / LOCATE POINT
09H	GP1
0AH	GP2
0BH	GP3
0CH	GP4
0DH	GP5
0EH	GP6
0FH	GP7
4FH	TRACK RECORD READY

4. Bulk Dump

VS-2000 can transfer and receive the scenes, the EZ ROUTING User Templates and the User Effect Patches by bulk dump.

In order to make bulk dump transmit, a transmitting function is performed on UTILITY-MIDI BULK DUMP screen.

In order to make bulk dump receive, after changing into a reception standby state on UTILITY-MIDI BULK DUMP screen, the bulk dump which the VS-2000 outputted beforehand is sent to the VS-2000.

5. V-LINK TRANSMITTED DATA

The following control command will be transmitted while V-LIN function is activated.

■ CHANNEL VOICE MESSAGES

● CONTROL CHANG

○Controller Number 0

This is used to switch image banks. (MIDI ch.=1 fixed)

In the V-LINK activated mode, while AUTOMIX is playing, this is transmitted when the current time coincides with the pre-registered time for switching image bank.

Status	Second	Third
B0H	00H	mmH

mm = Bank Number : 00H - 7FH (1 - 128)

○Controller Number 1

If the V-LINK function is On and the UTILITY V-LINK SETUP screen's FADER ASSIGN Sw is also On, this message is transmitted when you operate a fader assigned to Brightness (MIDI ch. is fixed at 1).

Status	Second	Third
B0H	01H	mmH

mm = Control Value: 0H - 7FH (0 - 127)

○Controller Number 5

If the V-LINK function is On and the UTILITY V-LINK SETUP screen's FADER ASSIGN Sw is also On, this message is transmitted when you operate a fader assigned to Dissolve Time (MIDI ch. is fixed at 1).

Status	Second	Third
B0H	05H	mmH

mm = Control Value : 0H - 7FH (0 - 127)

○Controller Number 7

If the V-LINK function is On and the UTILITY V-LINK SETUP screen's FADER ASSIGN Sw is also On, this message is transmitted when you operate a fader assigned to Color Cb (MIDI ch. is fixed at 1).

Status	Second	Third
B0H	07H	mmH

mm = Control Value : 0H - 7FH (0 - 127)

○Controller Number 10

If the V-LINK function is On and the UTILITY V-LINK SETUP screen's FADER ASSIGN Sw is also On, this message is transmitted when you operate a fader assigned to Color Cr (MIDI ch. is fixed at 1).

Status	Second	Third
B0H	0AH	mmH

mm = Control Value : 0H - 7FH (0 - 127)

○Controller Number 11

If the V-LINK function is On and the UTILITY V-LINK SETUP screen's FADER ASSIGN Sw is also On, this message is transmitted when you operate a fader assigned to T Bar (MIDI ch. is fixed at 1).

Status	Second	Third
B0H	0BH	mmH

mm = Control Value : 0H - 7FH (0 - 127)

○Controller Number 72

If the V-LINK function is On and the UTILITY V-LINK SETUP screen's FADER ASSIGN Sw is also On, this message is transmitted when you operate a fader assigned to Playback Speed (MIDI ch. is fixed at 1).

Status	Second	Third
B0H	48H	mmH

mm = Control Value : 0H - 7FH (0 - 127)

PROGRAM CHANGE

This is used to switch image clip to be played or to select video input channel. (MIDI ch. = 1 fixed)In the V-LINK activated mode and while AUTOMIX is playing, this is transmitted when the current time coincides with the pre-registered time for switching image clip.

Status	Second
C0H	ppH

pp = Program No. : 00H - 7FH (1 - 128)

CHANNEL MODE MESSAGES

RESET ALL CONTROLLERS (Controller number 121)

This is transmitted when [CLEAR]+[V-LINK] are pressed. (MIDI ch.=1 fixed)

Status	Second	Third
B0H	79H	00H

ALL NOTEOFF(Controller number 123)

This is transmitted when VS-2000 stops. (MIDI ch.=1 fixed)

Status	Second	Third
B0H	7BH	00H

SYSTEM EXCLUSIVE MESSAGES

OV-LINK ON

Status	Data Byte	Status
F0H	41H,7FH,00H,51H,12H,10H, 00H,00H,01H,aaH, ..., ffH,Sum	F7H

Byte	Description
F0H	Status of System Exclusive Message
41H	Manufacturer ID (Roland)
7FH	Device ID
00H 51H	Model ID (DV-7PR)
12H	Command ID (DT1)
10H	Address MSB
00H	Address
00H	Address LSB
01H	V-LINK ON/OFF (ON)
aaH	Clip Ctrl Rx MIDI ch (*1)
bbH	Color Ctrl Rx MIDI ch (*1)
ccH	Note Message Enabled (*2)
ddH	Fast Control Enabled (*3)
eeH	MMC Control Mode (*4)
ffH	MTC Control Mode(*5)
Sum	Check Sum
F7H	EOX (End of System Exclusive message)

These messages are transmitted when V-LINK function turns to enable.
VS-2000 doesn't receive these messages.

- (*1) 00H(ch.1) fixed
- (*2) 00H(OFF) fixed
- (*3) 01H(ON) fixed
- (*4) It depends on MMC mode(OFF, MASTER or SLAVE) of VS-2000 as followings.
 - OFF 00H(OFF)
 - MASTER 01H(SLAVE)
 - SLAVE 02H(MASTER)
- (*5) It depends on SYNC mode(INT or EXT) of VS-2000 as followings.
 - INT 01H(SLAVE)
 - EXT 02H(MASTER)

OV-LINK OFF

Status	Data Byte	Status
F0H	41H,7FH,00H,51H,12H,10H, 00H,00H,00H,Sum	F7H

Byte	Description
F0H	Status of System Exclusive Message
41H	Manufacturer ID (Roland)
7FH	Device ID
00H 51H	Model ID (DV-7PR)
12H	Command ID (DT1)
10H	Address MSB
00H	Address
00H	Address LSB
01H	V-LINK ON/OFF (OFF)
Sum	Check Sum
F7H	EOX (End of System Exclusive message)

These messages are transmitted when V-LINK function turns to disable.
VS-2000 doesn't receive these messages.

SET CLIP CONTROL ASSIGNMENT

Status	Data Byte	Status
F0H	41H,7FH,00H,51H,12H,10H,10H,00H, 05H,00H,00H,05H,0FH,0FH,00H,0BH,Sum	F7H

Byte	Description
F0H	Status of System Exclusive Message
41H	Manufacturer ID (Roland)
7FH	Device ID
00H 51H	Model ID (DV-7PR)
12H	Command ID (DT1)
10H	Address MSB
10H	Address
00H	Address LSB
04H	Playback Speed Control Assign(MSN)
08H	Playback Speed Control Assign(LSN)
00H	Dissolve Time Control Assign(MSN)
05H	Dissolve Time Control Assign(LSN)
0FH	Audio Level Control Assign (MSN) (*1)
0FH	Audio Level Control Assign (LSN) (*1)
00H	T Bar Control Assign (MSN)
0BH	T Bar Control Assign (LSN)
Sum	Check Sum
F7H	EOX (End of System Exclusive message)

These messages are transmitted when V-LINK function turns to enable.
VS-2000 doesn't receive these messages.

(*1) On the VS-2000, the audio level cannot be controlled.

SET COLOR CONTROL ASSIGNMENT

Status	Data Byte	Status
F0H	41H,7FH,00H,51H,12H,10H,20H, 00H,00H,07H,00H,0AH,00H,01H,Sum	F7H

Byte	Description
F0H	Status of System Exclusive Message
41H	Manufacturer ID (Roland)
7FH	Device ID
00H 51H	Model IDModel ID (DV-7PR)
12H	Command ID (DT1)

00H	Color Cr Control Assign(MSN)
0AH	Color Cr Control Assign(LSN)
00H	Brightness Control Assign(MSN)
01H	Brightness Control Assign(LSN)
Sum	Check Sum
F7H	EOX (End of System Exclusive message)

These messages are transmitted when V-LINK function turns to enable.
VS-2000 doesn't receive these messages.

6. Appendices

● Decimal and Hexadecimal table

(Hexadecimal number is shown with H.)

In MIDI documentation, data values and addresses/sizes of system exclusive messages etc. are expressed as hexadecimal values for each 7 bits.

the following table shows how these correspond to decimal numbers.

dec	hex	dec	hex	dec	hex	dec	hex
0	00H	32	20H	64	40H	96	60H
1	01H	33	21H	65	41H	97	61H
2	02H	34	22H	66	42H	98	62H
3	03H	35	23H	67	43H	99	63H
4	04H	36	24H	68	44H	100	64H
5	05H	37	25H	69	45H	101	65H
6	06H	38	26H	70	46H	102	66H
7	07H	39	27H	71	47H	103	67H
8	08H	40	28H	72	48H	104	68H
9	09H	41	29H	73	49H	105	69H
10	0AH	42	2AH	74	4AH	106	6AH
11	0BH	43	2BH	75	4BH	107	6BH
12	0CH	44	2CH	76	4CH	108	6CH
13	0DH	45	2DH	77	4DH	109	6DH
14	0EH	46	2EH	78	4EH	110	6EH
15	0FH	47	2FH	79	4FH	111	6FH
16	10H	48	30H	80	50H	112	70H
17	11H	49	31H	81	51H	113	71H
18	12H	50	32H	82	52H	114	72H
19	13H	51	33H	83	53H	115	73H
20	14H	52	34H	84	54H	116	74H
21	15H	53	35H	85	55H	117	75H
22	16H	54	36H	86	56H	118	76H
23	17H	55	37H	87	57H	119	77H
24	18H	56	38H	88	58H	120	78H
25	19H	57	39H	89	59H	121	79H
26	1AH	58	3AH	90	5AH	122	7AH
27	1BH	59	3BH	91	5BH	123	7BH
28	1CH	60	3CH	92	5CH	124	7CH
29	1DH	61	3DH	93	5DH	125	7DH
30	1EH	62	3EH	94	5EH	126	7EH
31	1FH	63	3FH	95	5FH	127	7FH

- (*) Decimal values such as MIDI channel, bank select, and program change are listed as one(1) greater than the values given in the above table.
- (*) A 7-bit byte can express data in the range of 128 steps. For data where greater precision is required, we must use two or more bytes. For example, two hexadecimal numbers aa bbH expression two 7-bit bytes would indicate a value of aa x 128 + bb.
- (*) In the case of values which have a +/- sign, 40H=-64, 00H=0, 3FH=+63, so that the decimal expression would be 64 less than the value given in the above chart.
In the case of two types, 40 00H = -8192, 00 00H = 0, 3F 7FH = +8191.
- (*) Data marked "nibbled" is expressed in hexadecimal in 4-bit units.
A value expressed as a 20byte nibble 0a 0bH has the value of a x 16 + b.

<Ex.1> What 5AH in decimal system?
5AH = 90 according to the above table.

<Ex.2> What in decimal system is 12034H in hexadecimal of every 7 bit?
12H = 18, 34H = 52 according to the above table. So 18 x 128 + 52 = 2356.

<Ex.3> What in decimal system is 0A 03 09 0D in nibble system?
0AH = 10, 03H = 3, 09H = 9, 0DH = 13 according to the above table.
So ((10 x 16 + 3) x 16 + 9) x 16 + 13 = 41885.

<Ex.4> What in nibble system is 1258 in decimal system?

```

16) 1258
   78 ... 10
   4 ... 14
   0 ... 4

```

0 = 00H, 4 = 04H, 14 = 0EH, 10 = 0AH according to the above table. So it is 00 04 0E 0AH.

● Example of system exclusive message and Checksum calculation

On Roland system exclusive message (DT1), checksum is added at the end of transmitted data (in front of F7) to check the message is received correctly.
Value of checksum is defined by address and data (or size) of the system exclusive message to be transmitted.

○How to calculate checksum (Hexadecimal number is shown with H.)

checksum is a value which lower 7 bit of the sum of address, size and checksum itself turns to be 0.

If the address of the system exclusive message to be transmitted is aa bb cH and data or size is dd ee fH,

aa + bb + cc + dd + ee + ff = sum
sum / 128 = quotient and odd

When odd is 0, 0 = checksum
When odd is other than 0, 128 - odd = checksum.

■ MIDI Machine Control (MMC) Command, Information Field/Response Reference

● Command Recognized

Command	Action
01H STOP	STOP
02H PLAY	PLAY
03H DEFERRED PLAY	PLAY
04H FAST FORWARD	FF
05H REWIND	REW
06H RECORD STROBE	REC / PUNCH IN
07H RECORD EXIT	PUNCH OUT
0DH MMC RESET	RESET
40H WRITE	write to Information fields
41H MASKED WRITE	Set Track Status Information Fields
44H 00H LOCATE I/F	LOCATE (Read Locator)
44H 01H LOCATE TARGET	LOCATE (Designated Time)
4CH MOVE	Move between Information

● Commands Transmitted

Command	Action
01H STOP	STOP
03H DEFERRED PLAY	PLAY
06H RECORD STROBE	REC / PUNCH IN
07H RECORD EXIT	PUNCH OUT
0DH MMC RESET	RESET
44H 01H LOCATE TARGET	LOCATE

● Valid Information Fields/response

Command	Action	Valid Commands
01H SELECTED TIME CODE	Current Time	MOVE (FROM)
08H GP0 / LOCATE POINT	Locator 1	MOVE (FROM), MOVE (TO), WRITE
09H GP1	Locator 2	MOVE (FROM), MOVE (TO), WRITE
0AH GP2	Locator 3	MOVE (FROM), MOVE (TO), WRITE
0BH GP3	Locator 4	MOVE (FROM), MOVE (TO), WRITE
0CH GP4	Locator 5	MOVE (FROM), MOVE (TO), WRITE
0DH GP5	Locator 6	MOVE (FROM), MOVE (TO), WRITE
0EH GP6	Locator 7	MOVE (FROM), MOVE (TO), WRITE
0FH GP7	Locator 8	MOVE (FROM), MOVE (TO), WRITE
4FH TRACK RECORD READY	Track Status	MASKED WRITE, WRITE

SPECIFICATIONS

VS-2000CD Digital Studio Workstation

Tracks	Tracks: 18 + 2 Master Tracks V-Tracks: 320 (16 V-Tracks per each Track)																				
Sample Rate	44.1 kHz																				
Recording Mode	Linear 24 bits (M24) Linear 16 bits (M16) CD Writing (CDR) (*) (*) Master tracks only																				
Maximum Simultaneous Recording / play back Tracks	8 tr. Rec / 18 tr. Play (M16) 8 tr. Rec / 12 tr. Play (M24) <i>* Depending on the organization of the song data, the disk drive performance, etc., the number of tracks that can be simultaneously recorded or played back may be limited.</i>																				
Internal Hard Disk Drive Capacity	40 G bytes																				
Recording Time (Partition size: 10 GB, calculated for 1 track, unit: minutes)	<table><tr><td>Recording Mode</td><td colspan="4">Partition No.</td></tr><tr><td></td><td>IDE:0</td><td>IDE:1</td><td>IDE:2</td><td>IDE:3</td></tr><tr><td>M24</td><td>1,432</td><td>1,432</td><td>1,432</td><td>840</td></tr><tr><td>M16</td><td>2,152</td><td>2,152</td><td>2,152</td><td>1,262</td></tr></table> <i>* The above-listed recording times are approximate. Times may varies slightly depending on the specifications of the disk drive and the number of songs that were created.</i>	Recording Mode	Partition No.					IDE:0	IDE:1	IDE:2	IDE:3	M24	1,432	1,432	1,432	840	M16	2,152	2,152	2,152	1,262
Recording Mode	Partition No.																				
	IDE:0	IDE:1	IDE:2	IDE:3																	
M24	1,432	1,432	1,432	840																	
M16	2,152	2,152	2,152	1,262																	
Frequency Response	20 Hz–20 kHz (+0 dB/-2 dB)																				
Projects	200 projects in each partition																				
Marker	1000 per project																				
Locator	96 (16 x 6 banks) per project																				
Scene	96 (16 x 6 banks) per project																				
Undo/Redo	999 Undo / 1 Redo																				
Nominal Input Level (variable)	Input 1–8: -50– +14 dBu (maximum +26 dBu: balanced, maximum +20 dBu: unbalanced) Guitar (Hi-Z): -50– +14 dBu (maximum +20 dBu)																				
Input Impedance	Input 1–8 : 32 k ohms (balanced) Guitar (Hi-Z) : 1 M ohms																				
Nominal Output Level	Master Out: +4 dBu (balanced) AUX (L, R): 0 dBu (unbalanced) Monitor Out: 0 dBu (unbalanced)																				
Output Impedance	Master Out: 600 ohms AUX (L, R): 300 ohms Monitor Out: 300 ohms Phones: 22 ohms																				
Recommended Load Impedance	Master Out: 10 k ohms or greater AUX (L, R): 10 k ohms or greater Monitor Out: 10 k ohms or greater Phones: 32 ohms																				

Residual Noise Level (INPUT SENS: LINE, IHF-A, typ.)	Master Out: -86 dBu or less AUX: -86 dBu or less Monitor Out: -86 dBu or less
EQ	4-band (2 shelving + 2 peaking)
Dynamics Processor	Compressor, Expander
Effects	Maximum 6 stereo (One pre-installed + 2 more optional Effect Expansion Boards)
Display	320 x 240 dots Graphic LCD (with backlit)
Interface	Digital I/O: Coaxial (conforms to IEC60958) MIDI: 5-pin DIN USB: USB2.0 Mass Storage
Hard Disk Drive	3.5-inch, 40 GB
CD-RW Drive	Reading Speed: 24x (max.) Recording Speed: Supports 4x speed writing (CD-R) Supports 4x speed rewriting (CD-RW)
Connectors	MIDI Connectors (5-pin DIN type) USB Connector Input Jack 1-8 (XLR type, phantom power) Input Jack 1-8 (1/4 inch TRS phone type) Guitar (Hi-Z) Jack (1/4 inch phone type) Digital In Connectors (Coaxial type) Digital Out Connectors (Coaxial type) Foot Switch Jack (1/4 inch phone type) Master Out Jack L/R (1/4 inch TRS phone type) Monitor Out Jack L/R (RCA phono type) AUX Send Jack L/R (RCA phono type) Headphones Jack (Stereo 1/4 inch phone type)
Power Supply	DC 12 V (AC Adaptor)
Current Draw	3.6 A
Dimensions	466 (W) x 371 (D) x 115 (H) mm 18-3/8 (W) x 14-5/8 (D) x 4-9/16 (H) inches
Weight	6.7 kg 14 lbs 13 oz
Accessories	Owner's Manual Appendices Mixer Block Diagram Application Software CD (VS-2000 Wave Converter) Short Cut Seal Power Cord AC Adaptor (PSB-3U)
Options	24-bit Effect Expansion Boards: VS8F-2, VS8F-3 Foot Switch: FS-5U (BOSS) Pedal Switch: DP-2

(0dBu=0.775Vrms)

Copyright

- Unauthorized recording, distribution, sale, lending, public performance, broadcasting, or the like, in whole or in part, of a work (musical composition, video, broadcast, public performance, or the like) whose copyright is held by a third party is prohibited by law.
- When exchanging audio signals through a digital connection with an external instrument, this unit can perform recording without being subject to the restrictions of the Serial Copy Management System (SCMS). This is because the unit is intended solely for musical production, and is designed not to be subject to restrictions as long as it is used to record works (such as your own compositions) that do not infringe on the copyrights of others. (SCMS is a feature that prohibits second-generation and later copying through a digital connection. It is built into MD recorders and other consumer digital-audio equipment as a copyright-protection feature.)
- Do not use this unit for purposes that could infringe on a copyright held by a third party. Roland assumes no responsibility whatsoever with regard to any infringements of third-party copyrights arising through your use of this unit.

About the License Agreement

- The VS-2000 and its CD-R/RW capability are designed to allow you to reproduce material to which you have copyright, or material which the copyright owner has granted you permission to copy. Accordingly, reproduction of Music CD or other copyrighted material without permission of the copyright owner avoiding technical prohibiting features of second-generation and later copying like SCMS or others constitutes copyright infringement and may incur penalties even in case such reproduction is for your own personal use and enjoyment (private use). Consult a copyright specialist or special publications for more detailed information on obtaining such permission from copyright holders.
