

**SpiderCapo**™  
Patented

## MOUNTING SPIDERCAPRO ON THE FINGERBOARD

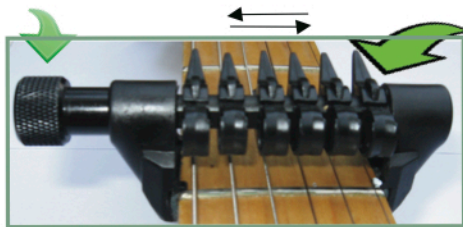

1. Rotate the FINGERS to the Up position.  
← as shown

2. Place the TAB behind the fret [shown] for tunability, or in front, for tonal accuracy.

3. Twist the Knob to make Finger-tight, being sure the TABS are on top of the Fingerboard.

4. NUBS are used to slide the FINGER over the string, then, use the FINGER HANDLE to capo the String.

Note: Lefties must reverse the direction of the FINGERS

**Warning: TABS must be placed ABOVE the face of the fingerboard before tightening the KNOB. TABS alongside the neck will make an indent on the guitar neck when tightened.**

## With the SpiderCapo™ you can:

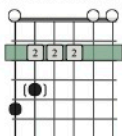

- Explore unlimited creative possibilities, new tunings, keys, harmonies, and textures, not possible with standard tuning
- Use easily in live performance, even change tunings while playing
- Finger above and below the capo
- Fine tune each capoed string, even use as a full capo with fine tuning
- Play melodies with open string accompaniment
- Play all the bar chords and riffs you already know, plus unlimited new chords
- Soft leather protects your guitar neck
