

LiveBook™

LiveBook™ mobile audio workstation is the recording studio you take with you. Sleek, light and powerful, LiveBook puts recording and editing power in your hands wherever you are. LiveBook is ready to capture the exact sound of the room. Ready to edit on the fly. Ready to spin anywhere you perform!

Bring the studio with you.

If you're a songwriter you know that inspiration can come at any time. Imagine the power of carrying your own demo studio. If you're a DJ you know the back breaking pain of lugging decks and discs from show to show. Imagine your entire collection and the power to spin in a lightweight package that fits in a backpack. If you're a pro engineer you know what its like to go days without seeing the sun. Imagine taking the show on the road. The power to record, edit and playback as many tracks of audio as a desktop.

The complete solution.

Open the lid and watch the gorgeous 15.4" Widescreen display come to life. Blaze through complicated commands with a 2.1 GHz processor and up to 2GB of RAM. Keep it all safe with 100GB of internal storage. Expand with FireWire® and USB 2.0 external devices, microphones, headphones, an external display, multiple memory card formats and PCI cards. You'll think you're using a powerful desktop computer until you pack it up in seconds and take it to the gig.

Plug and Play.

LiveBook is now shipping with SONAR LE capable of the recording, MIDI and mixing functionality of an 8 input recorder and 64 track mix down system. Open the box and you're recording.

Limitless storage.

There is literally no end to your storage capacity with the ultra fast StormDrive by Rain. Connect as many as you need to your LiveBook via FireWire® and record straight to the 7200 RPM drive. StormDrive cools itself without a fan reducing the number of moving parts that can create additional heat, noise and potential for failure. It's modular so you can keep adding them as needed.

LiveBook

- Intel® Pentium® M 1.6G (2M) 730J 533MHz Centrino
- 1 GB -533 MHz DDR2 SDRAM
