ULTRA-CURVE DESIGN 1.0

FREE OF CHARGE

FIRMWARE UPDATE VERSION 1.3 AND WINDOWS® ULTRA-CURVE DESIGN 1.0 EDITOR SOFTWARE FOR ULTRA-CURVE PRO DSP8024

FREE OF CHARGE

Features of the new firmware version 1.3:

The new firmware version 1.3 for the BEHRINGER ULTRA-CURVE PRO mainly adds **extensive MIDI sys-ex implementation** for remote control via a PC. To be capable of controlling the large amount of DSP8024 parameters via MIDI, we had to adapt and expand the DSP8024 firmware. The new MIDI implementation permits **real-time control of all parameter settings**, program selection and enables you to **send entire settings** using a

MIDI dump (transfer of sys-ex data). Additionally, single bugs were fixed. Free download at www.behringer.com.

WINDOWS® ULTRA-CURVE DESIGN 1.0 editor software version:

The brand-new software editor 1.0 for the ULTRA-CURVE PRO allows easy and comfortable editing of all parameters and fast/convenient archiving of

presets via MIDI. All you need is a PC or laptop equipped with a MIDI interface.

The above figure shows the Graphic EQ control window, which allows easy access to each of the 31 frequencies. Additionally, you are able to invert the adjusted EQ curve or, for example, create a so-called shelving or peaking curve. The control windows provide you with every information you need and keep you up to date, even if your DSP8024's display can't be viewed due to fixed installation. With the help of the second window, you can immediately adapt parameters to your own needs. Parameters are organized in groups and can be edited easily with the help of long virtual faders.

The real-time analyzer window informs you about the exact levels in all frequency bands of your audio signal: super-smooth on-screen display. Use the advantage of easily loading/storing presets on harddisk—for perfect organization and effective working. Free download at www.behringer.com.

IMPORTANT NOTE:

To use the new WINDOWS® ULTRA-CURVE DESIGN editor software 1.0 it is necessary to have the **new firmware 1.3** installed in your ULTRA-CURVE PRO DSP8024.
