ToneBug

Reverb

CONGRATULATIONS

on your purchase of Reverb, part of a brand new series of great-sounding, pared-down pedals from T-Rex Engineering.

Reverb helps bring your sound to life by putting you up on the stage. And we mean any stage – from a steamy blues club to a huge outdoor stadium. No matter what settings you choose, though, you can count on Reverb to sound great and give you all the incredible tone you'd expect from a T-Rex pedal.

Using your Reverb is easy and intuitive. Just turn the page to get started.

READY, SET, GO!

Using your ToneBug Reverb

Insert a 9 Volt alkaline battery or connect the pedal to one of the T-Rex FuelTank power supplies (not included).

This pedal accepts both 9 and 12 Volt DC (see technical specs).

Plug your guitar into the INPUT jack, and run a lead from the OUTPUT jack into your amp.

Set the mode switch to MODERN for a contemporary reverb sound or SPRING, for a more retro sound.

Adjust the DECAY setting to determine how long your reverb will last, and the DEPTH setting to determine how "heavy" it will be.

TECHNICAL SPECIFICATIONS:

Input Impedance @ 1KHz	Higher than 1 M Ohm
Output Impedance @ 1KHz	Lower than 1 K Ohm
Power supply	9V DC
Minimum Power supply Voltage	8V DC
Maximum Power supply Voltage	12,5V DC
Current Draw @ 9V DC	75 mA
Maximum input signal Vp/p	2,5 Vp/p
Battery Type	9V battery 6F22 Alkaline
Battery Life	0,5 to 1 Hours
External connectors	Input Jack. Output Jack, 9V DC Jack (center pin negative)
Controls	On/Off, Decay, Modern/Spring, Depth
Depth	120 mm
Width	78 mm
Height	60 mm
Weight (excl. battery)	0,404 Kg
